第十届 (2015)TeV 物理工作组学术研讨会

Saturday, 8 August 2015 - Sunday, 9 August 2015

Beijing

Book of Abstracts

Contents

Openning 1

The Progress of Chinese ATLAS Group 1

The Progress of Chinese CMS Group 1

The Progress of Chinese LHCb Group 1

Top Quark As Partons 1

Heavy quarkonium production from top quark decay at the LHC 1

Determing Vtb at e+ e- collider 1

Supersymmetry explanation of the Fermi Galactic Center excess and its test at LHC run II 2

Heavy colored SUSY partners from deflected anomaly 2

Searching for Top Squarks in the Compressed Scenario 2

Split Supersymmetry Under GUT and Current Dark Matter Constraints 2

Approach to High Precision Higgs Production 2

extra Higgs bosons in the alignment 2

The Higgs boson profile 3

Disentangling the new physics via the correlation of the single Higgs and double Higgs productions 3

The simple non-Abelian extensions and Diboson excesses at the LHC 3

Di-boson Resonance Searches at CMS 3

Low Scale Composite Higgs and 2 TeV Di-boson Excess 3

Precision calculations of semileptonic B decays 3

Dark matter signals at future high energy colliders 3

Search for dark matter at colliders 4

Possible large CP violation in three body decays of heavy baryonl 4

LHC phenomenology of the type II seesaw: Observability of neutral scalars in the nondegenerate case 4

12

The Progress of Chinese ATLAS Group

Corresponding Author: jins@ihep.ac.cn

13

The Progress of Chinese CMS Group

Corresponding Author: maoyj@pku.edu.cn

14

The Progress of Chinese LHCb Group

15

Top Quark As Partons

Corresponding Author: than@pitt.edu

16

Heavy quarkonium production from top quark decay at the LHC

Corresponding Author: gang.li@uah.edu

17

Determing Vtb at e+ e- collider

Corresponding Author: binyan@pku.edu.cn

18

Supersymmetry explanation of the Fermi Galactic Center excess and its test at LHC run II

Corresponding Author: jmyang@itp.ac.cn

19

Heavy colored SUSY partners from deflected anomaly

20

Searching for Top Squarks in the Compressed Scenario

Corresponding Author: kechen@ihep.ac.cn

21

Split Supersymmetry Under GUT and Current Dark Matter Constraints

Corresponding Author: wywang@mail.itp.ac.cn

22

Approach to High Precision Higgs Production

23

extra Higgs bosons in the alignment

Corresponding Author: yunjiang@ucdavis.edu

24

The Higgs boson profile

Corresponding Author: chenms@ihep.ac.cn

25

Disentangling the new physics via the correlation of the single Higgs and double Higgs productions

26

The simple non-Abelian extensions and Diboson excesses at the LHC

Corresponding Author: qinghongcao@pku.edu.cn

27

Di-boson Resonance Searches at CMS

28

Low Scale Composite Higgs and 2 TeV Di-boson Excess

Corresponding Author: jshu@itp.ac.cn

29

Precision calculations of semileptonic B decays

Corresponding Author: yuming.wang@tum.de

31

Dark matter signals at future high energy colliders

32

Search for dark matter at colliders

33

Possible large CP violation in three body decays of heavy baryonl

34

LHC phenomenology of the type II seesaw: Observability of neutral scalars in the nondegenerate case
