Evidence of Dark Matter

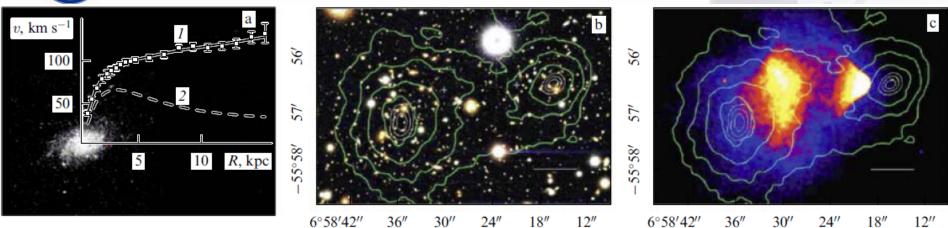

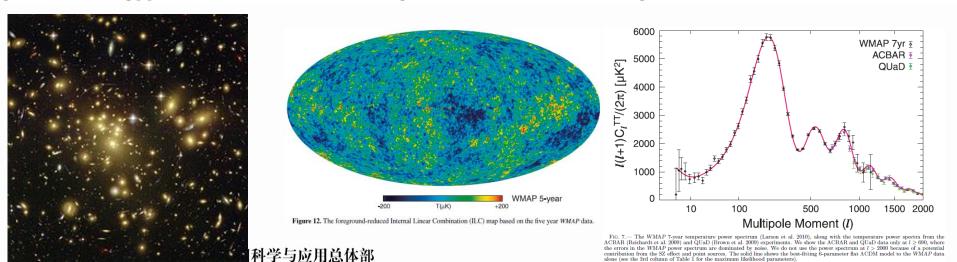

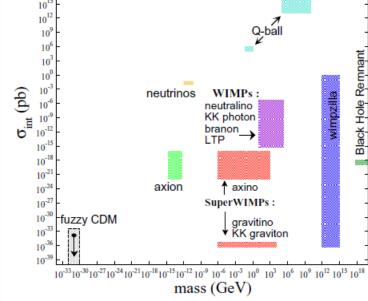

Figure 2. (a) Rotation curves for the M33 galaxy [4]: 1, the observed curve, 2, theoretical curve of the glowing galactic disk. (b) Optical and (c) X-ray images of cluster 1E0657-558 obtained with the Hubble and Chandra telescopes, respectively. The curves show mass density contours reconstructed by gravitational lensing [5]. Horizontal axes are the inclination angles, vertical axes are the ascention angles.

Candidates for DM particles

- Neutrinos
 - Standard model neutrinos
 - Sterile neutrinos
 - Heavy and very heavy neutrinos
- WIMPs
 - Supersymmetric particles, e.g. neutralino
 - Kaluza-Klein states
- SWIMPs. E.g. axions
- Magnetic monopoles
- Mirror particles
- Exotic baryonic candidates
 - MAssive Compact Halo Objects (MACHO), Stragelets and nuclearities, Technibaryons, CHAMPs, Superheavy X-particles, Supersymmetric Q-balls, crypto-baryonic DM

Some Dark Matter Candidate Particles

Baer & Tata 2009

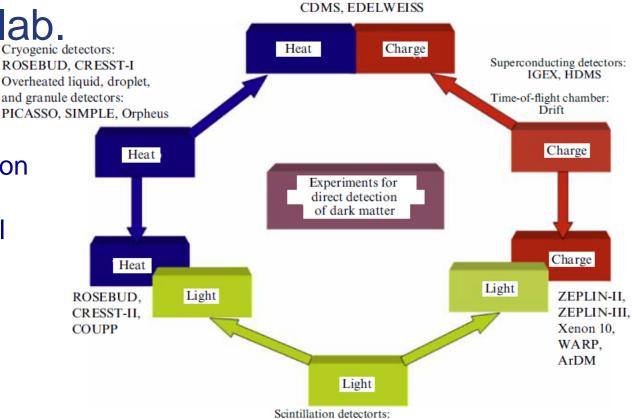

Detection methods of WIMPs

Directly. Via elastic scattering on detector

nuclei in the lab.

Difficulty:

Scattering cross section <10⁻⁶ pb; Small Energy of recoil nuclei ~10-100 keV; High background;

DAMA, NaIAD, ANAIS, Kamioka, KIMS, PICOLON, ZEPLIN-I

Figure 10. Principal detection methods and experiments designed to search for WIMPs.

Ryabov 2008

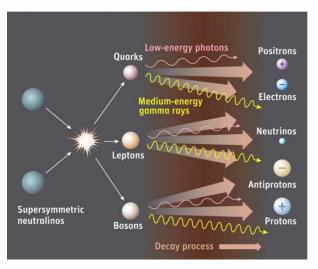

Detection methods of WIMPs

 Indirectly. Via annihilation products e.g. gamma-rays, positrons, anti-protons, neutrinos.

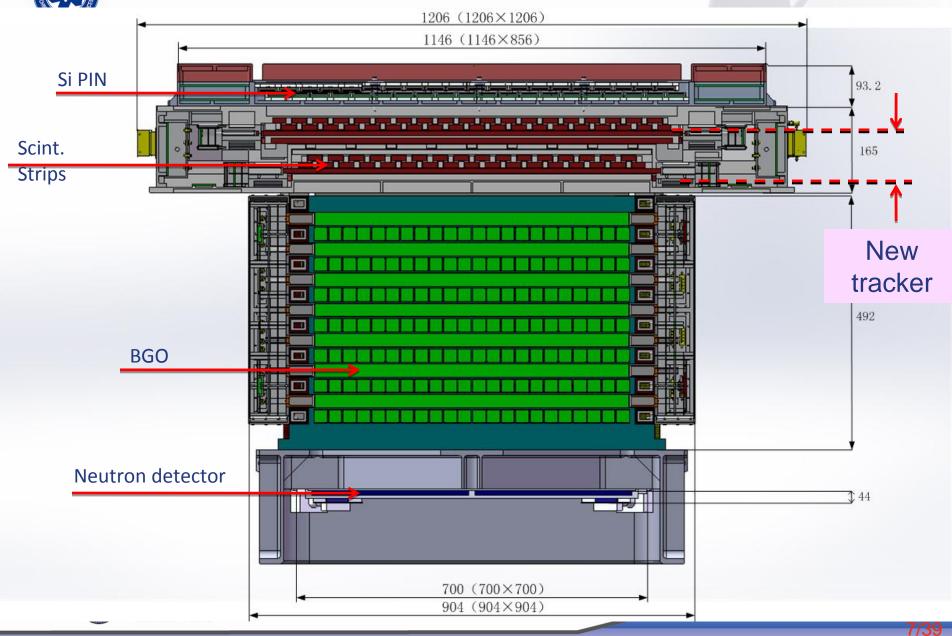

The typical energy of these final states is about a tenth of the dark matter particle mass, so we can search indirectly for dark matter by looking for an excess of photons, antimatter or neutrinos in astrophysical data at energies between 1 GeV and 10 TeV. (*Bertone 2010*)

Annihilation place	particles	mission
Center of sun	neutrino	AMANDA, ICECUBE
Galactic center	photon	FERMI, HESS
Halo	positron	AMS, PAMELA, HEAT

China's DArk Matter Particle Experiment (DAMPE)

Comparisons with other missions

Best Energy Resolution

	FERMI	AMS	ATIC	CALET	China (DAMPE)
Energy Resolution	15%	3-8%	2-3%	3%	1.5%

Broadest Energy Band (electron/gamma)

	FERMI	AMS	ATIC	CALET	China (DAMPE)
Energy Band	<1 TeV	<1-2 TeV	<3 TeV	<3-5 TeV	5 GeV- 10TeV

And Lowest Background

Planned for 2015 launch!

China's Space Station Program

- Three phases
 - 1st phase: so far 7 Chinese astronauts have been sent out and returned back successfully; many space science research has been done.
 Completed successfully.
 - 2nd phase: spacelab: docking of 3 spaceships with astronauts delivering and installing scientific instruments. 1st launch on Sept. 29, 2011.
 - 3rd phase: spacestation: several large experimental cabins with astronauts working onboard constantly. 1st launch ~2018.

International collaborations on space science research have been and will continue to be an important part.

telescope (?)

Candidate Projects

Cosmic Lighthouse Program onboard China's Space Station

spectroscopic survey facility (OK)	Dark energy, dark matter distribution, large scale structure of the universe
HERD (OK)	Dark matter properties, cosmic ray composition, high energy electron and gamma-rays
Soft X-ray-UV all sky monitor (?)	X-ray binaries, supernovae, gamma-ray bursts, active galactic nuclei, tidal disruption of stars by supermassive black holes
X-ray polarimeter (?)	Black holes, neutron stars, accretion disks, supernova remnants
Galactic warm-hot gas spectroscopic mapper (?)	The Milky Way, interstellar medium, missing baryons in the Universe
High sensitivity solar high energy detector (?)	Solar flares, high energy particle acceleration mechanism, space weather
Infrared spectroscopic survey	Stars galaxies active galactic nuclei

Stars, galaxies, active galactic nuclei

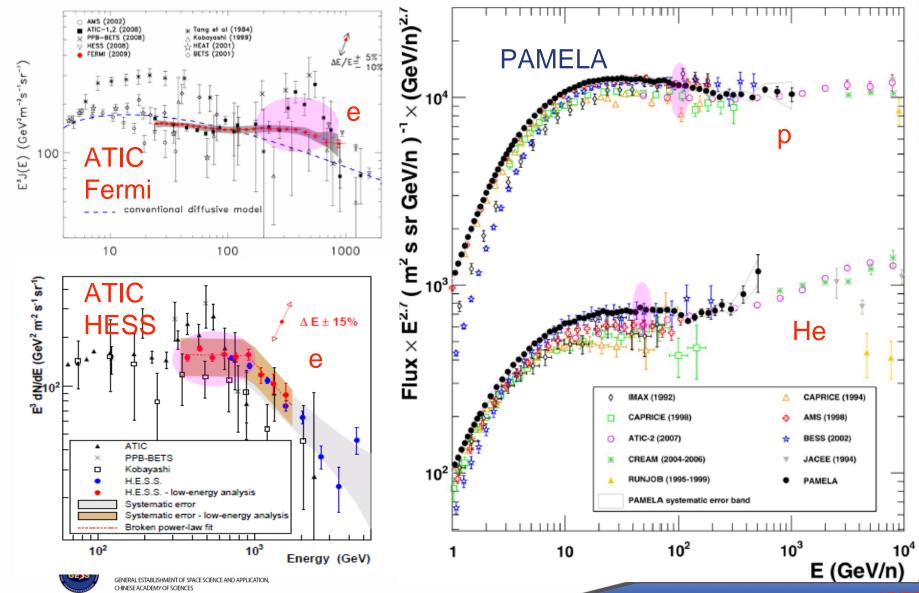

Main Science Topics

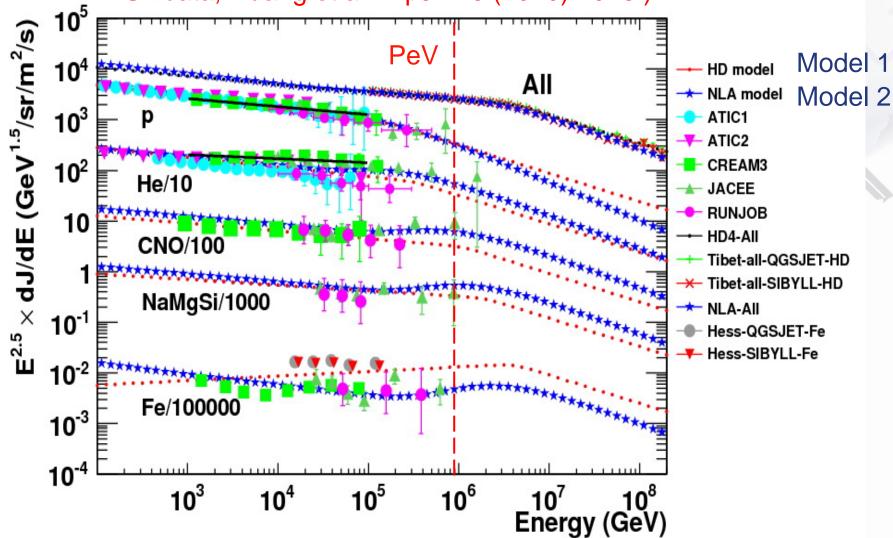

Brief scientific background: DM & CR

CR composition models around the "Knee"

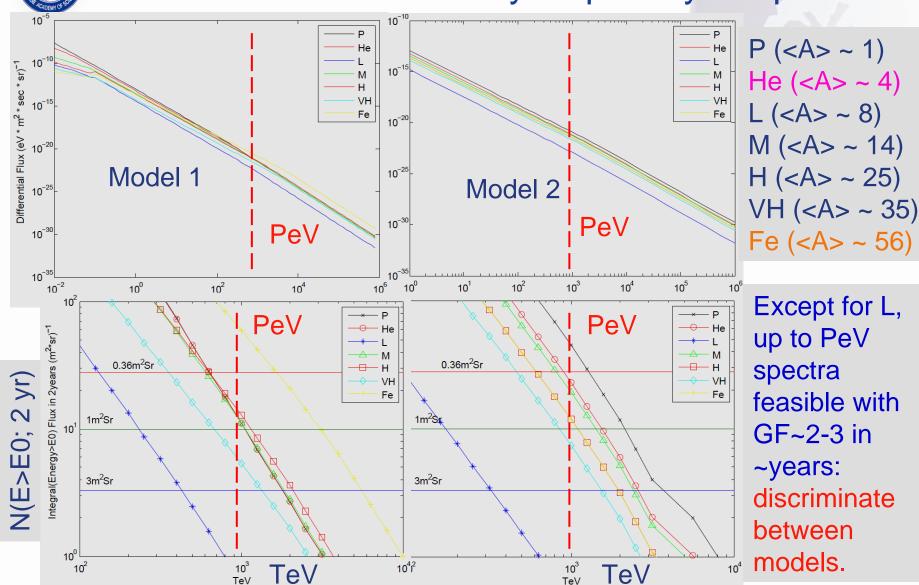

中国科学院空间科学与应用总体部

GENERAL ESTABLISHMENT OF SPACE SCIENCE AND APPLICATION, CHINESE ACADEMY OF SCIENCES

HERD Cosmic Ray Capability Requirement

Requirements for HERD

Science goals	Mission requirements
Dark matter search	R1: Better energy (& direction) measurements of e/y between 100 MeV to 10 TeV
Origin of Galactic Cosmic rays	R2: Better composition (& specrtal) measurements of CRs between 100 GeV to PeV with a large geometrical factor

Secondary science (VHE γ -ray astronomy): monitoring of GRBs, microquasars, Blazars and other transients.

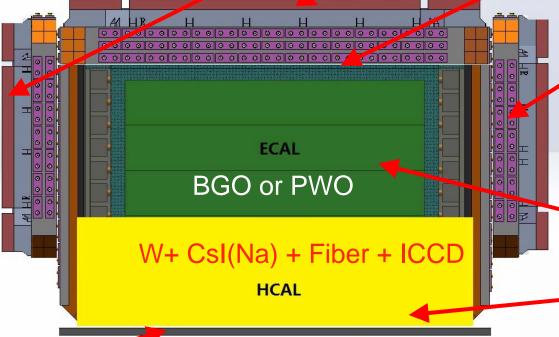

Baseline Design: ~2 T, ~2 KW

Charge detector: Si+PIN.

Top: $2x(70x70x(1cm \times 1cm \times 500um))$;

Sides: $4x(2x(70x40x(1cm \times 1cm \times 500um)))$

Shower Tracker:

W: $4X_{0:}$ 10x3.5mm +

2x17.5mm + 2x35mm

Scin. Fibers:

14x(2x(700x(1x1x700mm³)))

Nucleon Tracker: scin. fibers

400x(1x1x700mm³)+

700x(1x1x400mm³)

ECAL: $16X_0 = 0.7X_{NIL}$ $3x(2x(25x25x700mm^3))$

HCAL: W: 20x3.5mm (0.8X_{NIL})

Csl: 20x(2.5cmx2.5cmx0.2cm)

Neutron detector: B-doped plastic scintillator for delayed signals. Enhanced e/p discrimination. (TBD)

Main features

Performance	FOV	detectors
Good e/ y direction: R1	center	Shower Tracker + ECAL
e/ y discrimination: R1	center	Si-PIN + Shower Tracker
CR charge measurement up to z=26: R2	5-sides	Si-PIN + Shower Tracker
e/ y energy < 1 PeV: R1	center	ECAL + HCAL
CR spectrum < 1 PeV:	5-sides	HCAL+ Nucleon Tracker +ECAL + Shower Tracker
e/p discrimination: R1	center	HCAL+ECAL+ Neutron

Both requirements are satisfied. Almost every detector is used for both requirements; each function is performed with at least two detectors \rightarrow performance & redundancy.

Comparisons with other missions

	HER D	DAM PE	AMS	PAM ELA	FER MI	CALE T
e/ Y Energy Res. @100GeV	1%	1.5%	3%	5%	10%	2%
e/ y Ang. Res. @100GeV	0.30	0.80	0.3 ^o	1.0°	0.10	0.30
Geometrical Factor m ² .sr	1-2	0.3	0.1	0.02	1.0	0.1
e/p discrimination	5x10 ⁶	10 ⁵	10 ⁶	104	10 ³	10 ⁵
Energy range (GeV)	0.1- 10 ⁶	5-10 ⁴	0.1- 10 ³	0.1- 300	0.02- 300	5- 5x10 ³

HERD is advantageous in terms of energy resolution (e/ γ), geometrical factor (CR) and energy range (e/ γ & CR).

Shower max as the minimum detector thickness

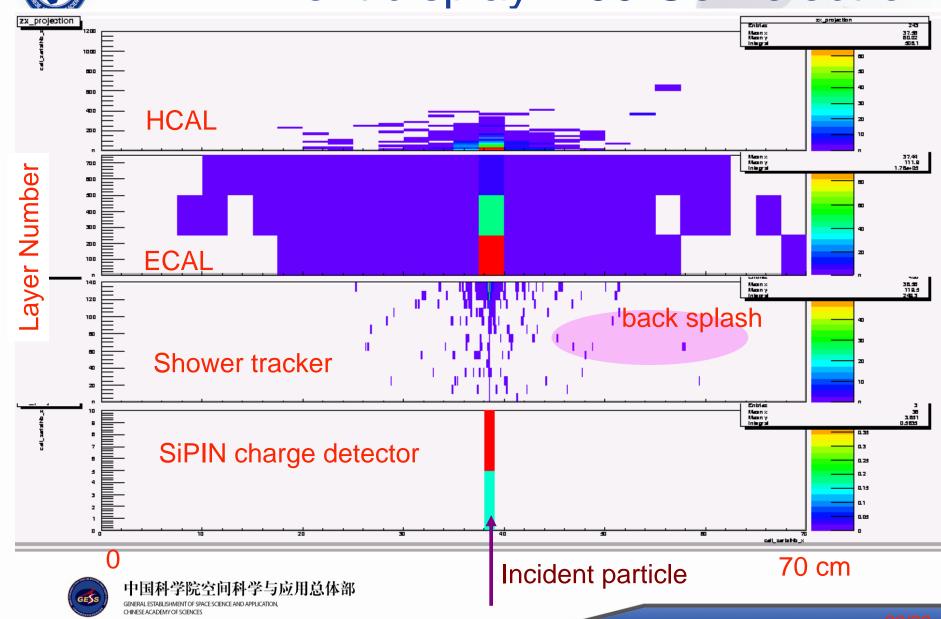

Fluka based MC: Tungsten (W)

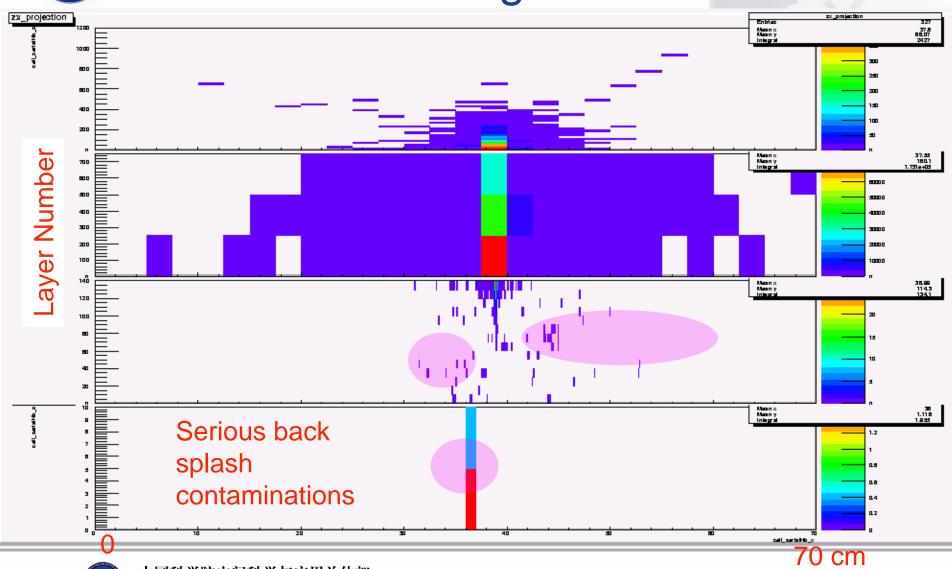

Event display: 200 GeV electron

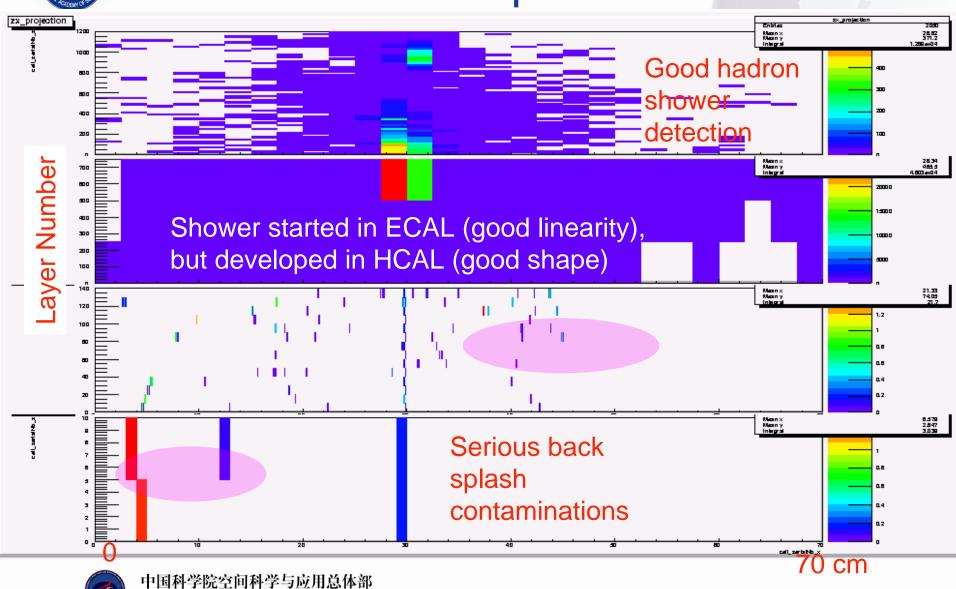

200 GeV gamma

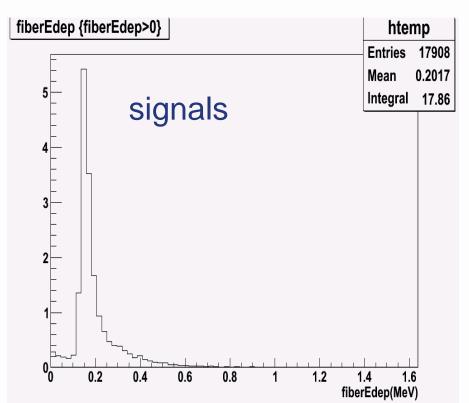

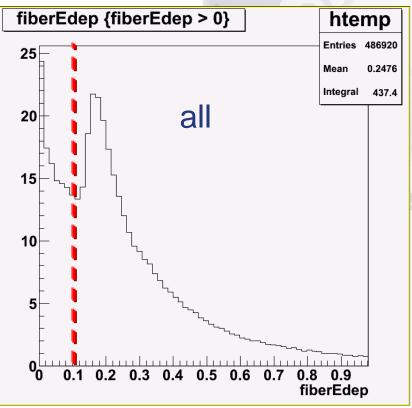

200 GeV proton

Back-splash rejection

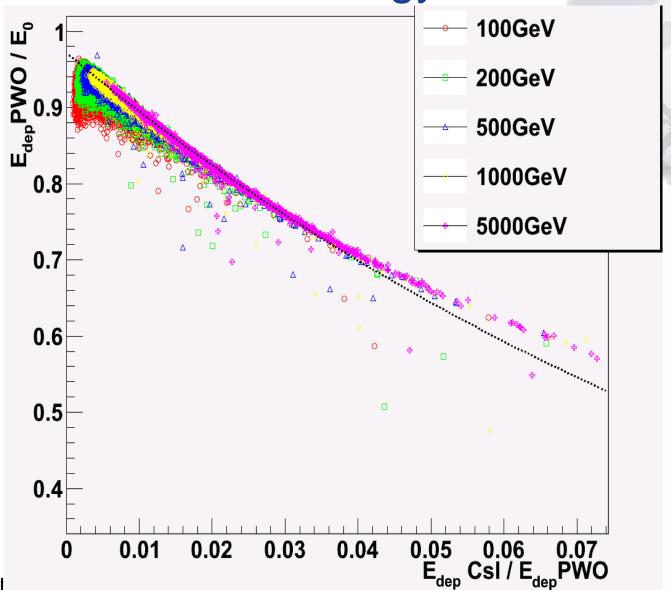

Threshold > 100 keV: 20% back-splash rejected and 5% signal loss

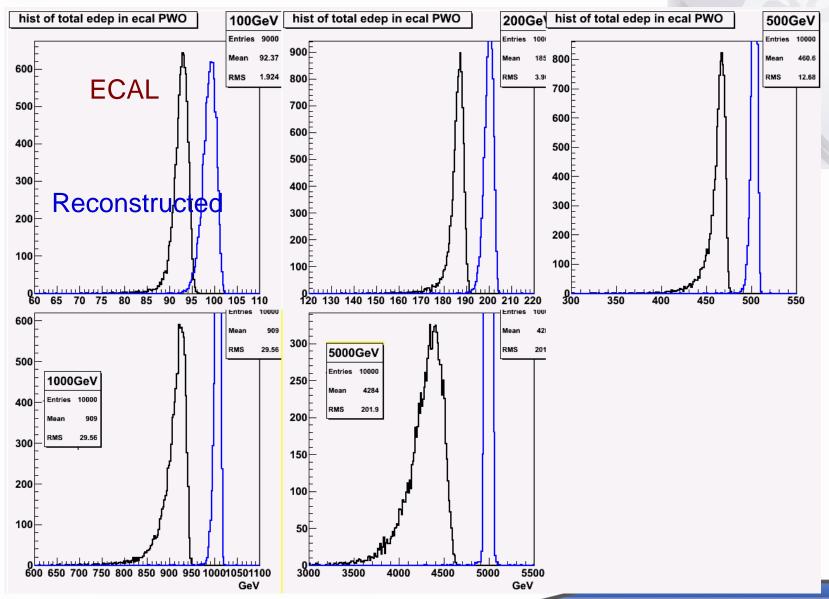

e/ y energy reconstruction

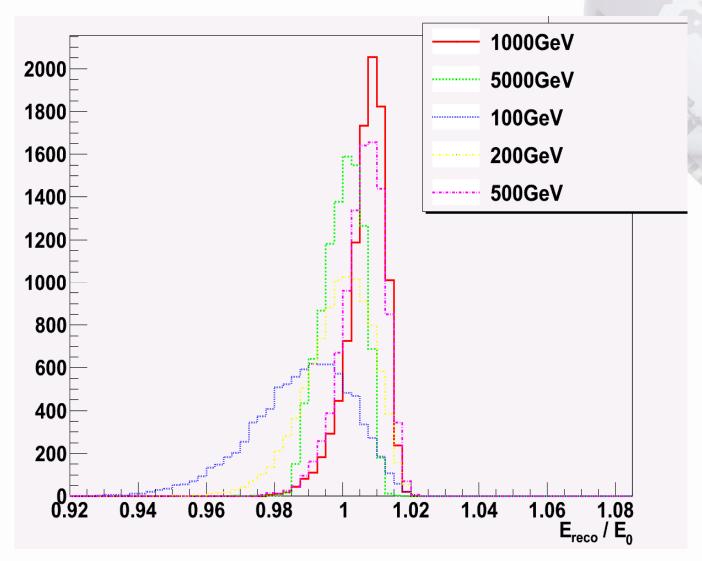

e/ y energy reconstruction

e/ y energy reconstruction

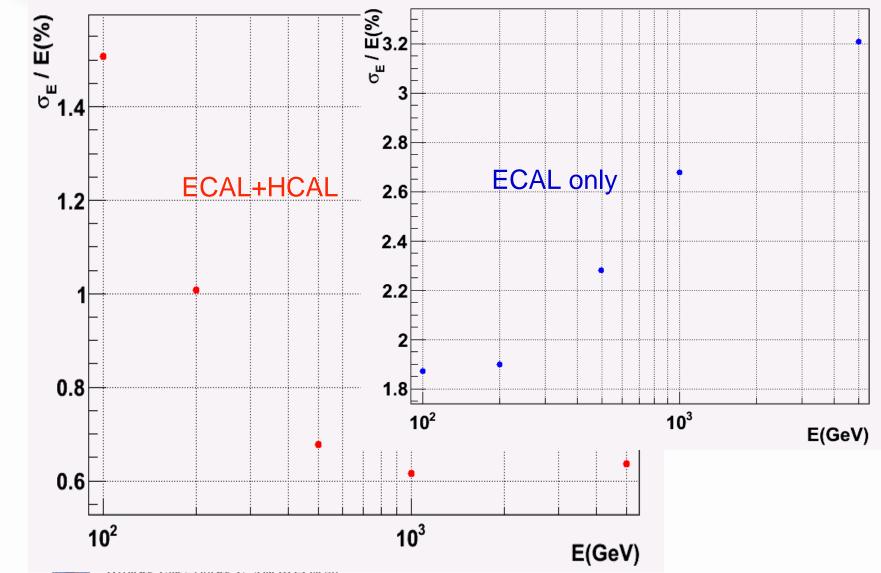

中国科学院空间科学与应用总体部

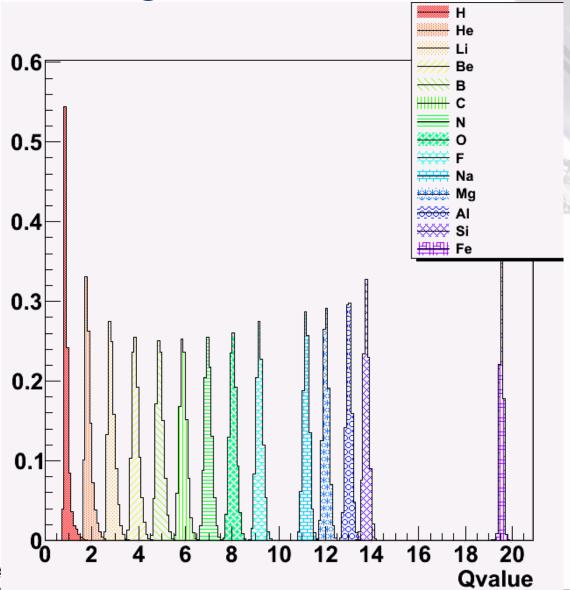

e/ y energy resolution

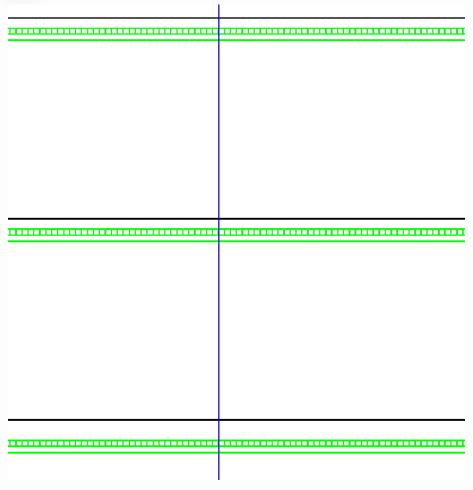

Charge reconstruction: with SiPIN

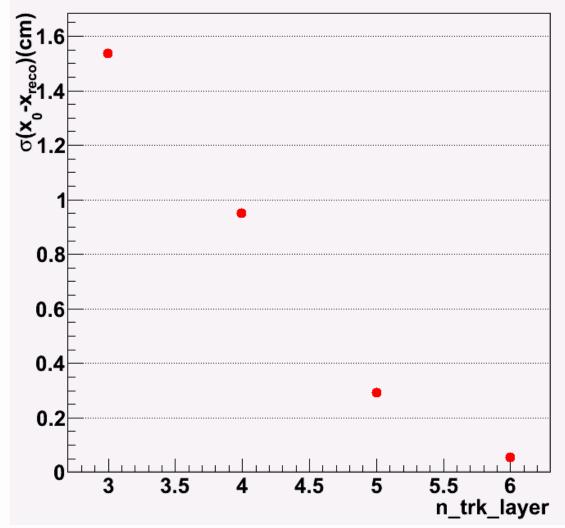

Tracking optimization

- Top tracker
 - Scintillation Fibers (1 mm×1 mm) XY
 - W: 6×0.175 cm 1×0.35 cm
 - Separation: 3 cm
 - Readout channels: $700 \times 2 \times 7 = 9800$

Single track position vs no. of layers

Additional constraints: $\Delta \times ^2 < 1e-5$ Linear fit iterations < 10,000

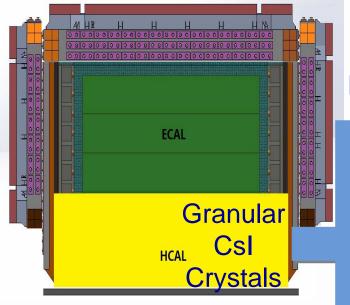

Expect photon converted in the first few layers of the tracker, and the more hit layers the better resolution

0.5 mm position resolution → ~0.4 deg

Csl light transmission and collection

Direct Coupling

PD, APD, SiPM: Complicated system, high power consumption

MAPMT, SiPM: high power consumption

CCD: No single photon detection

EMCCD, EBCCD: no ns gate control

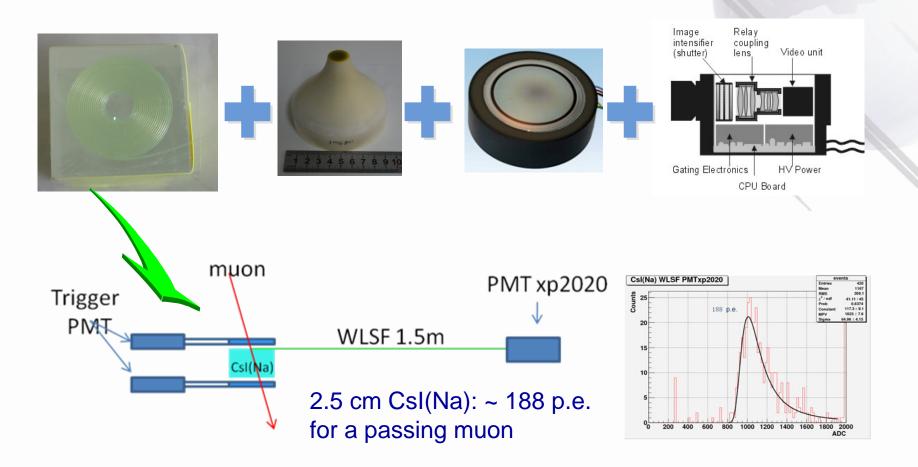

ICCD: no above problems, but premature

Wavelength Shifter Fiber

High frame rate and large format CCD

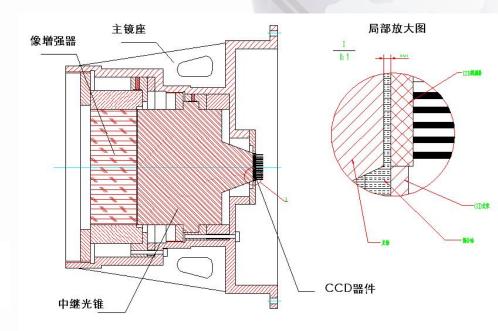

Two types of coupling

Relay mirrors

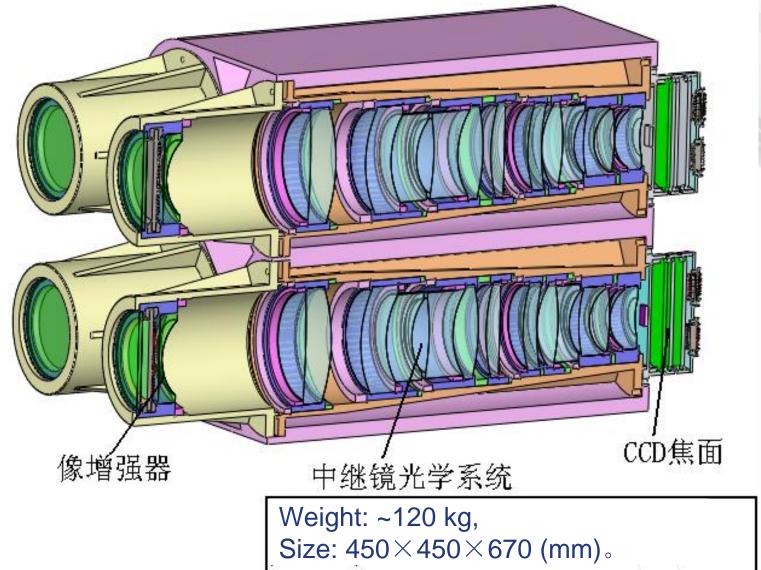

Single unit: weight of 18.393 kg, size, size of Φ 176×670(mm).

Conical coupler

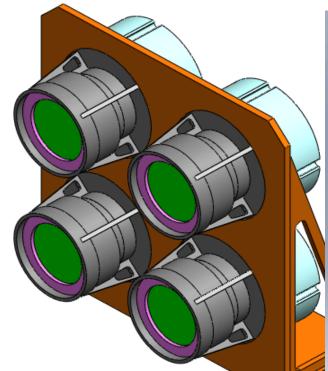

Full system: relay mirrors

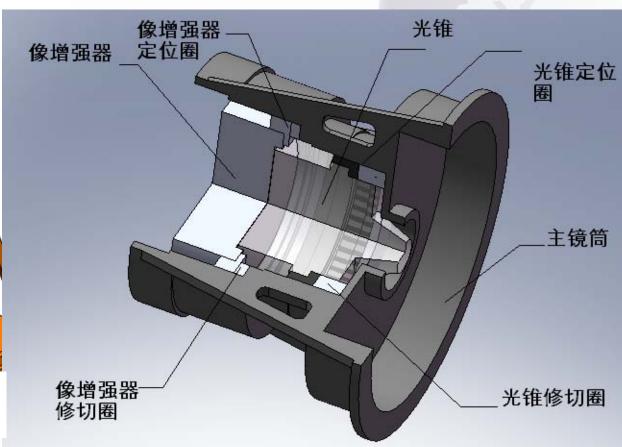

Conical coupler design

Weight: ~120 kg,

Size: $450 \times 450 \times 670$ (mm)

Current status of HERD

- The mission concept (science goals with requirements) has been selected, not in competition with other missions.
- The design concept has been reviewed on Feb. 29, 2012, together with all other proposals in all fields.
 - A top ranked mission concept at this stage.
 - However simulations on the concept just started, much more needs to be done to have a real design.
- Technical review for mission selection may happen anytime.
- Launch in 2018-2020.
- 1st international workshop on HERD to be held in Beijing on Oct. 17-19, 2012: scientific objectives, mission definition and international partnership.
 - Contact minzhang@ihep.ac.cn if you are interested in joining us.

The HERD Team

- Current member institutions (more wanted!)
 - Institute of High Energy Physics, China
 - Purple Mountain Observatory, China
 - Xi'an Institute of Optical and Precision Machines, China
 - University of Science and Technology of China
- Interested institutions (more wanted!)
 - University of Geneva, Switzerland
 - Università di Pisa, Italy
 - IAPS/INAF, Italy
 - University of Florence and INFN Firenze, Italy
 - University of Perugia, Italy
 - KTH, Sweden
