

# $\Lambda\Lambda$ Interaction and Neutron stars

Chang Ho Hyun  
(Deagu University, Korea)

In collaboration with  
Yeunhwan Lim (RISP/IBS, Korea)  
Kyujin Kwak (UNIST, Korea)  
Chang-Hwan Lee (Pusan Nat'l University, Korea)

# Contents

1. Hyperonization puzzle
2. Motif
3. Skyrme force
4. Our results
5. Summary

# 1. Hyperonization puzzle

## ● Status of neutron star mass measurement

*J.M. Lattimer, M. Prakash / Physics Reports 442 (2007) 109–165*

- Canonical range:  $(1.2-1.6) M_{\odot}$
- Out of canonical range: large errors
- Exceptions: Large mass with small errors

\* PSR J1614-2230:  $(1.97 \pm 0.04) M_{\odot}$

\* PSR J0348+0432:  $(2.01 \pm 0.04) M_{\odot}$

- Theoretical uncertainties

J.M. Lattimer and M. Prakash,  
PRL 94 (2005) 1101

- Nucleon-NR potential: (1.4-2.4)  $M_{\odot}$
- Nucleon-RMF: (1.5-2.8)  $M_{\odot}$
- Nucleon & Hyperon-RMF: (1.4-1.8)  $M_{\odot}$

- Hyperonization puzzle

Observation leaves narrow room for the existence of hyperons.

Hyperons should be kicked out?

How?

Other breakthrough?

## 2. Motif

- What solutions possible
  - $\beta$ -equilibrium is a wrong assumption
  - Modified gravity
  - Dark matter
  - Uncertainties in the hyperon interactions
- Hyperon interactions in RMF
  - Hyperon-Nucleon (YN): optical potential depth + quark counting
  - Hyperon-Hyperon (YY): SU(6) symmetry
- We try more realistic approach
  - YN and YY potential fitted to hyper-nuclear data
  - Skyrme force (NR potential): YN and YY as well as NN available

### 3. Skyrme force

- NN interaction: more than 100 models

$$\begin{aligned}
 v_{NN}(\mathbf{r}_{ij}) = & t_0(1 + x_0P_\sigma)\delta(\mathbf{r}_{ij}) + \frac{1}{2}t_1(1 + x_1P_\sigma)[\mathbf{k}_{ij}^2\delta(\mathbf{r}_{ij}) + \delta(\mathbf{r}_{ij})\mathbf{k}_{ij}^2] \\
 & + t_2(1 + x_2P_\sigma)\mathbf{k}_{ij} \cdot \delta(\mathbf{r}_{ij})\mathbf{k}_{ij} + \frac{1}{6}t_3(1 + x_3P_\sigma)\rho_N^\epsilon(\mathbf{R})\delta(\mathbf{r}_{ij}) \\
 & + iW_0\mathbf{k}_{ij} \cdot \delta(\mathbf{r}_{ij})(\boldsymbol{\sigma}_i + \boldsymbol{\sigma}_j) \times \mathbf{k}_{ij},
 \end{aligned}
 = \quad \times$$

- Contact types with 10 parameters
- Derivatives up to 2<sup>nd</sup> order plus density-dependent term

- Models in the work

<i>NN</i> model	$\rho_0$	$B$	$S_v$	$L$	$K$	$m_N^*/m_N$	$M_{\max}/M_\odot$
SLy4	0.160	16.0	32.0	45.9	230	0.694	2.06

- The stiffer, the lesser
- Neutron star cooling is sensitive to the internal composition: test the hyperonization puzzle with cooling curve

## 5. Summary

- Focus: the role of YN and YY interaction
- Skyrme force models: reproduce empirical data well
- YN and YY interactions: can be as important as NN
- Hyperon: can be compatible with observation
- Required improvements
  - $\Lambda\Lambda$  interactions: still poorly constrained
  - More and better statistics of experimental data essential
