

第十届 (2015)TeV 物理工作组学 术研讨会

samedi 8 août 2015 - dimanche 9 août 2015

Beijing

Recueil des résumés

Contents

Openning	1
The Progress of Chinese ATLAS Group	1
The Progress of Chinese CMS Group	1
The Progress of Chinese LHCb Group	1
Top Quark As Partons	1
Heavy quarkonium production from top quark decay at the LHC	1
Determing Vtb at e+ e- collider	1
Supersymmetry explanation of the Fermi Galactic Center excess and its test at LHC run II	2
Heavy colored SUSY partners from deflected anomaly	2
Searching for Top Squarks in the Compressed Scenario	2
Split Supersymmetry Under GUT and Current Dark Matter Constraints	2
Approach to High Precision Higgs Production	2
extra Higgs bosons in the alignment	2
The Higgs boson profile	3
Disentangling the new physics via the correlation of the single Higgs and double Higgs productions	3
The simple non-Abelian extensions and Diboson excesses at the LHC	3
Di-boson Resonance Searches at CMS	3
Low Scale Composite Higgs and 2 TeV Di-boson Excess	3
Precision calculations of semileptonic B decays	3
Dark matter signals at future high energy colliders	3
Search for dark matter at colliders	4
Possible large CP violation in three body decays of heavy baryonl	4

LHC phenomenology of the type II seesaw: Observability of neutral scalars in the nondegenerate case	4
---	---

Openning

Auteur correspondant wangq@mail.tsinghua.edu.cn

12

The Progress of Chinese ATLAS Group

Auteur correspondant jins@ihep.ac.cn

13

The Progress of Chinese CMS Group

Auteur correspondant maoyj@pku.edu.cn

14

The Progress of Chinese LHCb Group

15

Top Quark As Partons

Auteur correspondant than@pitt.edu

16

Heavy quarkonium production from top quark decay at the LHC

Auteur correspondant gang.li@uah.edu

17

Determining Vtb at e+ e- collider

Auteur correspondant binyan@pku.edu.cn

18

Supersymmetry explanation of the Fermi Galactic Center excess and its test at LHC run II

Auteur correspondant jmyang@itp.ac.cn

19

Heavy colored SUSY partners from deflected anomaly

20

Searching for Top Squarks in the Compressed Scenario

Auteur correspondant kechen@ihep.ac.cn

21

Split Supersymmetry Under GUT and Current Dark Matter Constraints

Auteur correspondant wywang@mail.itp.ac.cn

22

Approach to High Precision Higgs Production

23

extra Higgs bosons in the alignment

Auteur correspondant yunjiang@ucdavis.edu

24

The Higgs boson profile

Auteur correspondant chenms@ihep.ac.cn

25

Disentangling the new physics via the correlation of the single Higgs and double Higgs productions

26

The simple non-Abelian extensions and Diboson excesses at the LHC

Auteur correspondant qinghongcao@pku.edu.cn

27

Di-boson Resonance Searches at CMS

28

Low Scale Composite Higgs and 2 TeV Di-boson Excess

Auteur correspondant jshu@itp.ac.cn

29

Precision calculations of semileptonic B decays

Auteur correspondant yuming.wang@tum.de

31

Dark matter signals at future high energy colliders

32

Search for dark matter at colliders

33

Possible large CP violation in three body decays of heavy baryons

34

LHC phenomenology of the type II seesaw: Observability of neutral scalars in the nondegenerate case
