Separation Dipole

Crossing angle schemes

Crossing angle is achieved:

- ▶ for the horizontal plane by powering differently D1 and D2

- ▶ for the vertical plane by tilting D1 and D2 resulting in a vertical deflection

Full crossing angle=146 μ rad ²¹

Separation Dipole

Summary

- ◆ The first version of SPPC Lattice was designed . The whole length and layout is according to CEPC lattice layout. full crossing angle is 146urad.
- ◆ Crossing angle and Separation Dipole need to be studied and installation.
- ◆ LSS3_pp low- β pp optics need to be studied and optimization.
- ◆ The Dynamic Aperture need to be studied: MADX or Sixtrack.
