What is GRACE ?

What is GRACE ?

GRACE is a system to calculate tree- and ELWK loop-cross sections automatically with beam-polarizations based on SM and MSSM (+ more*).

Physics Report **430**, 117 (2006)

- * • New Higgs sector (Collaboration w/ CompHEP)
- Majorana neutrino search @ ILC

MSSM w/ beam-pol is not completed yet.

What is GRACE ?

Precision Control

NLG fixing (Phys. Rep. **430**, 117 (2006))

$$\mathcal{L}_{GF} = -\frac{1}{\xi_W} \left| (\partial_\mu - ie\tilde{\alpha}A_\mu - igc_W\tilde{\beta}Z_\mu)W^{\mu+} + \xi_W\frac{g}{2}(v + \tilde{\delta}H + i\tilde{\kappa}\chi_3)\chi^+ \right|^2$$
$$-\frac{1}{2\xi_Z} (\partial \cdot Z + \xi_Z\frac{g}{2c_W}(v + \tilde{\epsilon}H)\chi_3)^2 - \frac{1}{2\xi_A} (\partial \cdot A)^2.$$

The results must be independent of non-linear gauge parameters $(\tilde{\alpha}, \tilde{\beta}, \tilde{\delta}, \tilde{\kappa}, \tilde{\epsilon})$.

What is GRACE ?

Precision Control

$$\sigma_{full} = \sigma_{Tree} + \sigma_{Loop}(C_{UV}, \tilde{\alpha}, \tilde{\beta}, \tilde{\delta}, \tilde{\epsilon}, \tilde{\kappa}, \lambda) \\ + \sigma_{Tree} \delta_{soft}(\lambda, E_{\gamma} < k_c) + \sigma_{Hard}(k_c)$$

Soft photon: $E_{\gamma} < k_c$
Hard photon: $E_{\gamma} \geq k_c$

- C_{UV} (Ultra violet coefficient) independence
- Photon mass (λ) independence
- Gauge invariance
- k_c independence

What is GRACE ? Precision Control $\sqrt{s}=500$ GeV, $e^+e^- \rightarrow t\bar{t}$
