Events selection

Decay channel: $e^+e^- \rightarrow \pi^0\pi^0 J/\psi, J/\psi \rightarrow e^+e^-/\mu^+\mu^-$

- Only two Good tracks with total charge =0
 - Electron: $E/p > 0.7$ for both tracks, $\theta_{e^+e^-} < 175^\circ$ if $\cos\theta_{e^+} > 0.5$ or $\cos\theta_{e^-} < -0.5$
 - Muon: $E/p < 0.3$ for both tracks, at least one matches more than 6 MUC layers
- At least 4 good photons
 - Barrel: $E > 0.025\text{GeV}$ & $|\cos\theta| < 0.8$
 - Endcap: $E > 0.05\text{GeV}$ & $0.86 < |\cos\theta| < 0.92$
 - Time: $0 < t < 14$ ($\times 50\text{ns}$)
- 4-constraints kinematic fit to select 4 photons with minimal χ^2 , $\chi^2 < 80$
- Select two π^0 s with minimal $\chi_{\pi^0}^2 = (M_{\gamma_1\gamma_2} - M_{\pi^0})^2 + (M_{\gamma_3\gamma_4} - M_{\pi^0})^2$
- Mass window requirement: $M_{\pi^0} \in (0.12, 0.15)\text{GeV}/c^2$, $M_{J/\psi} \in (3.05, 3.15)\text{GeV}/c^2$

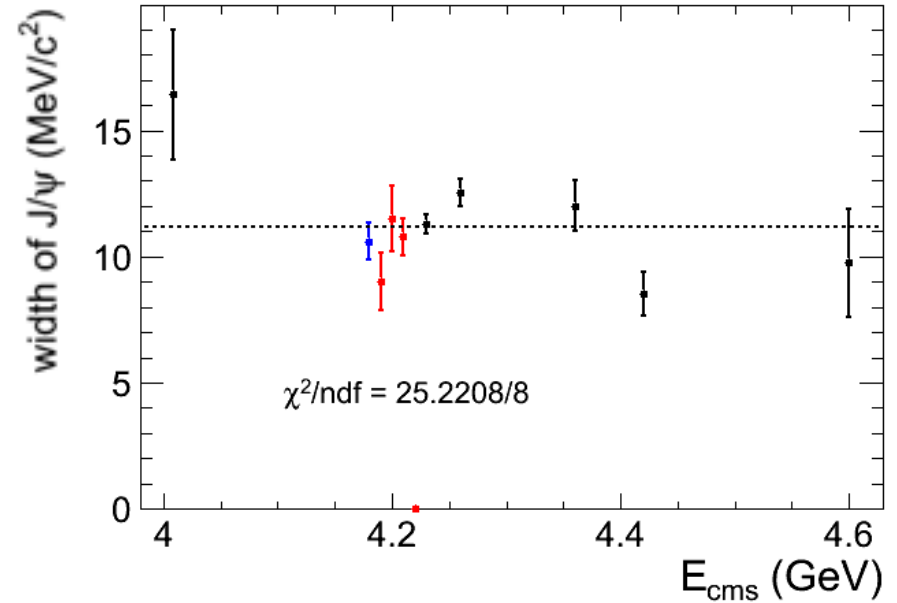

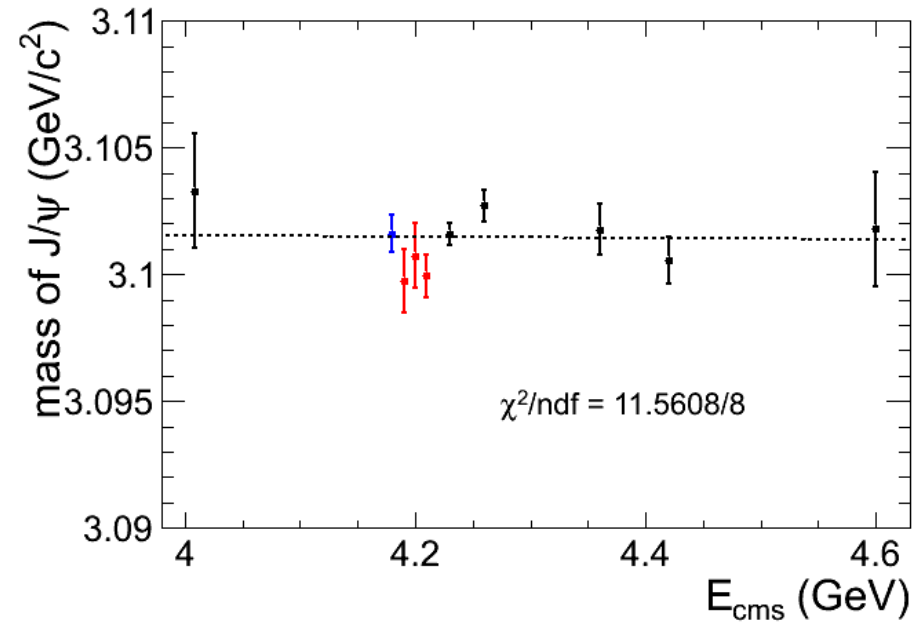

Fit results at different energy

- Gaussian + 1st polynomial

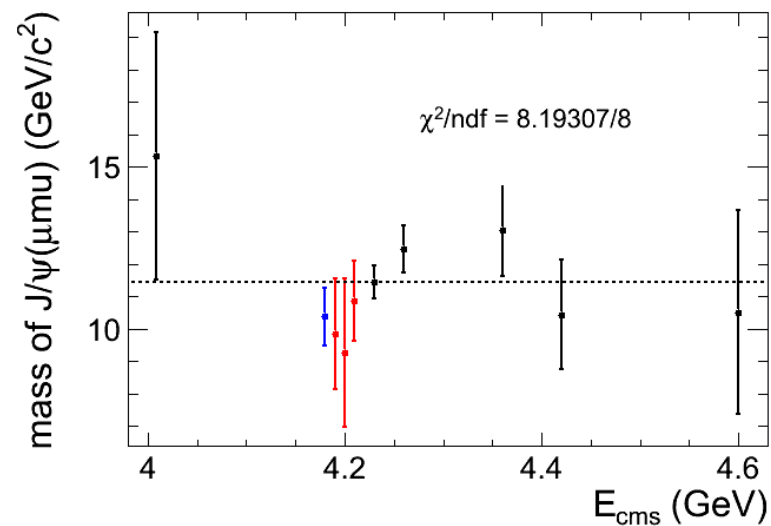

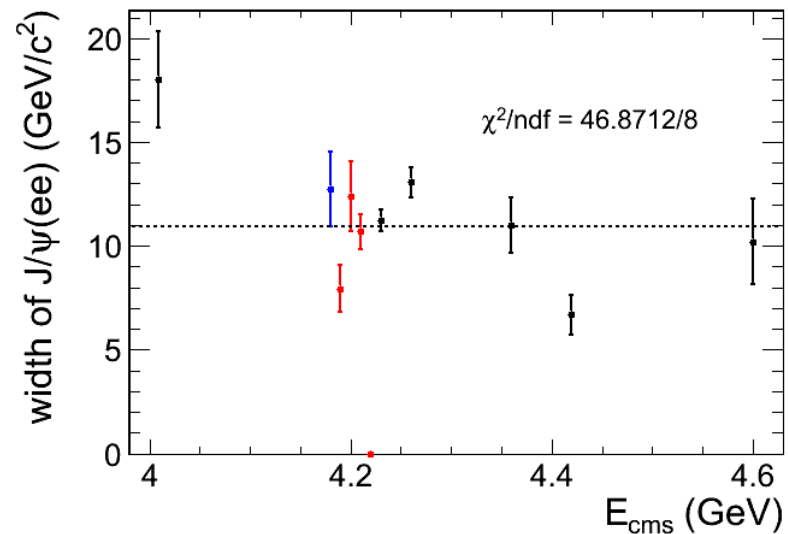

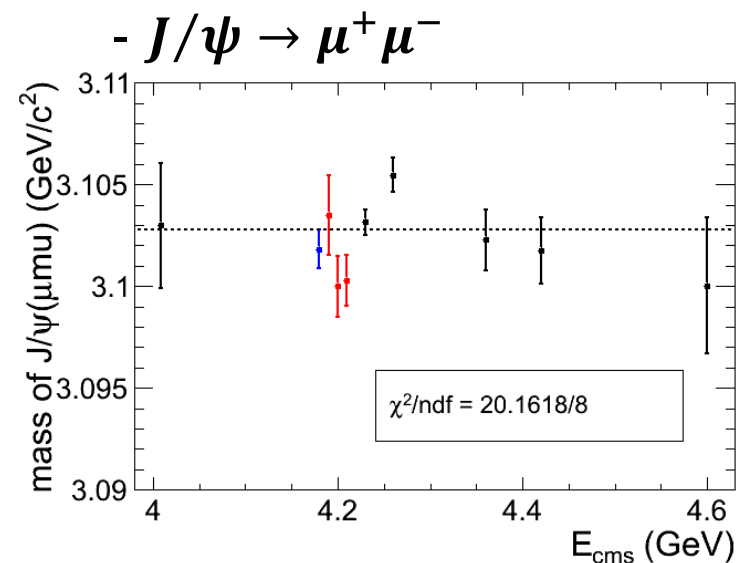

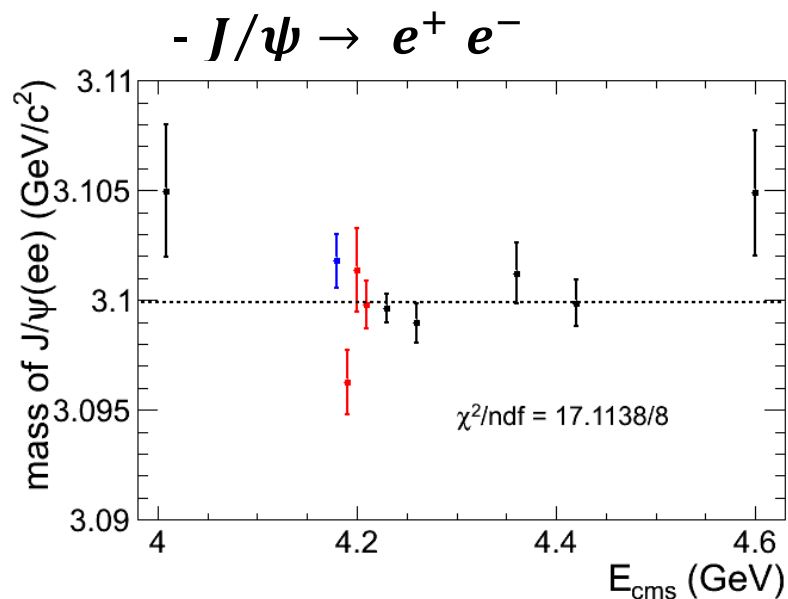

Charmonium group meeting

Mass and width of J/ψ

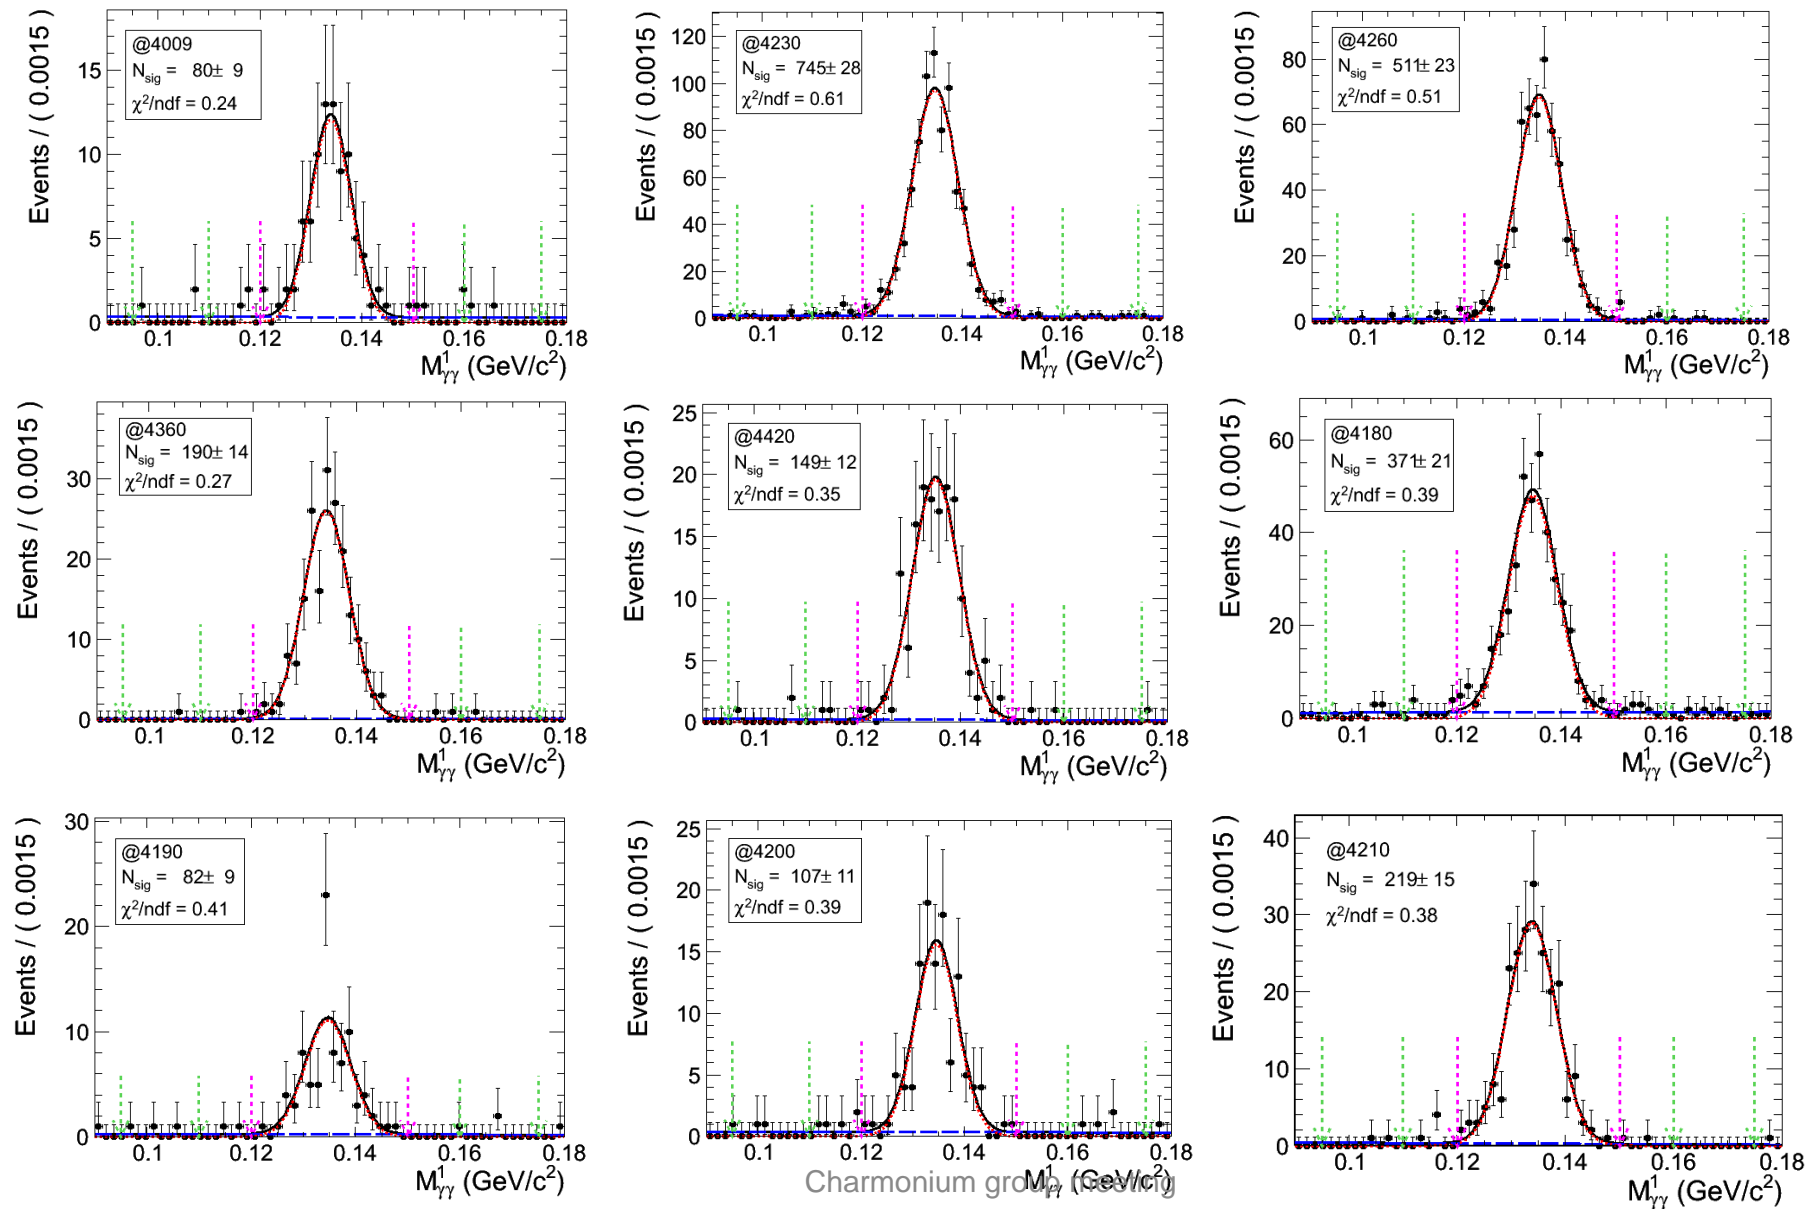

- Old data
- 4180
