- Percentage of Reco events in bin  $i$  from Gen events in bin  $j$  (i.e. row normalization)
- Eg. From all reconstructed events generated with 5 jets, 52% are indeed reconstructed with 5 jets, 32% with 4 jets, ...
- The response matrix is constructed using the selected events generated by MADGRAPH 5 (8 TeV) and AMC@NLO (13 TeV) MC generator

aMC@NLO+Pythia8 Resp. Matrix for Jet Multiplicity (excl.)
