

Some remarks on $Y(4260)$

Monday, 16 August 2021 16:50 (20 minutes)

Reviewing the experimental and theoretical status of $Y(4260)$, the presentation will discuss the nature of $Y(4260)$ from five aspects: mass predicted by potential model, OZI-suppressed/-allowed decays, non-peak in R scan, leptonic width, and radiative width. In the end, we are going to give a brief summary and prospect.
