# 4. Summary And Outlook

1.  $m_{PS,vv}$  and  $f_{PS,vv}$  have little difference under different ensembles with the same fermion action which can be ignored within the error.
2.  $m_{PS,vs}$  get a large discretization error which may have a linear relationship with  $m_{\pi,vv}^2$  and may be related to the lattice spacing.
3. Using  $m_{\pi,vv}^2, f_{\pi,vv}$  and the subtracted  $m_{\pi,vs,mix}^2$  (also other possible methods like low mode substitution), we will complete the fitting in the near future.
