

## Valence parton distribution of pion from lattice QCD at physical point

*Sunday, 31 October 2021 14:30 (30 minutes)*

We present the first lattice calculation of pion valence parton distribution using matching formula at NNLO level. We use the Wilson-Clover fermion on three 2+1 flavor HISQ ensembles of lattice spacings  $a = 0.04, 0.06$  and  $0.076$  fm, with two pion mass including the physical one. Two unitary Domain-Wall calculations at physical point are also presented. This allows us to control the continuum limit, quark mass effects as well as the chiral symmetry. Our analysis use ratio-based schemes to renormalize the equal-time bilocal quark-bilinear matrix elements. We extract first few moments model independently and reconstruct the  $x$ -dependent PDF.
