

ATLAS measurements of CP violation and rare decays processes with beauty mesons

Friday, 29 October 2021 17:20 (20 minutes)

The ATLAS experiment has performed measurements of B-meson rare decays proceeding via suppressed electroweak flavour changing neutral currents, and of mixing and CP violation in the neutral B_s meson system. This talk will focus on the latest results from the ATLAS collaboration, such as rare processes $B_s \rightarrow \mu\mu$ and $B^0 \rightarrow \mu\mu$, and CP violation in the $B_s \rightarrow J/\psi \phi$ decays. In the latter, the Standard Model predicts the CP violating mixing phase, ϕ_s , to be very small and its SM value is very well constrained, while in many new physics models large ϕ_s values are expected. The latest measurements of ϕ_s and several other parameters describing the $B_s \rightarrow J/\psi \phi$ decays will be reported.

Please choose the session this abstract belongs to

Particle physics

Primary author: ATLAS, speaker to be assigned (ATLAS)

Presenter: BONA, Marcella (Queen Mary University of London)

Session Classification: Session 2
