

Online mini-workshop on a detector concept with a crystal ECAL

Wednesday, 22 July 2020 - Thursday, 23 July 2020

Zoom

Scientific Programme

The scientific program covers a wide range of topics on the latest developments of crystals and readout schemes, as well as the progress on the studies of highly granular crystal calorimetry. We will also discuss possible options for other sub-systems (such as high-temperature superconducting solenoid, tracking detectors, etc.) as well as performance studies of particle-flow algorithms in physics benchmarks.
