# **CEPC Silicon Drift Chamber Tracker**

#### Xin Shi

Gang Li, Ryuta Kiuchi, Mingyi Dong, Jianchun Wang

CEPC Physics and Detector Plenary Meeting - 2020.09.16

#### Motivation for Silicon Drift chamber Tracker (SDT)

- Explore a different tracker option for CEPC
- Capable for both tracking and particle ID (flavor, JES, jet flavor,...)
- Combine the Silicon technology (strip, CMOS) and Drift chamber technology (IDEA, dE/dx, cluster counting, ...)
- Provide concrete platform to integrate smaller crystal ECAL
- Open path for better particle ID with future timing layer (LGAD) between SDT and crystal ECAL

#### CEPC SDT v1.0 recap

- Based on the baseline Silicon + TPC
- Replace TPC layers with two drift chamber layers
  - SIT 3&4 set at R=1.0m / larger cell size of DC than TPC

#### SDTv1.0: Momentum and recoil mass resolution

• < 1.6 degradation for momentum resolution

• ~12% increase for recoil mass resolution

#### SDT v2.0

- Switch to CEPCSW: <u>https://github.com/cepc/CEPCSW</u>
  - Implement SDT basic configuation
  - Straight cell structure along beam axis
  - Extract dE/dx & PID sepration

#### Hit map for pion with $\theta = 85^{\circ}$ and B = 3T

Dots represent hits for VXD (Black), SIT (Red), MDC1/2 (Green), SET (Blue)

# Simulation Settings

- Tracker: VXD SIT1/2 MDC1 SIT3/4 MDC2 SET
- Drift chambers:
  - 10 cell height
  - no stereo angle
  - stacking around center
  - gas: Ar/iC<sub>4</sub>H<sub>10</sub>(95%/5%) "TDR for TPC gas"
- Particle injection:
  - polar angle=85° for pion and kaon
  - particle gun momentum: 0.5, 0.75, 1, 3, 5, 10, 50, 100 GeV
  - 2000 events for each setting

#### dE/dx distribution

• Energy deposit per unit length (=10mm)

Figure 35.15: Energy deposit versus momentum measured in the ALICE TPC.

Energy deposition from GEANT4 with 90% truncation ratio

#### Resolution of dE/dx

• Resolution defined by (Gaussian)sigma/Mean

### S-value (PID performance)

• S-value distribution for K/ $\pi$  case

## Summary and Plan

- First look of dE/dx of SDT (two drift chambers) using the CEPCSW
- Obtained distributions silmilar with references

- Next:
  - Merge the existing code into CEPCSW master
  - Smaller tracker volume (R=1.5)
  - Signal digitization effect, Cluster counting, GarField
  - 2% dE/dx
  - More layers of silicon for better momentum resolution
