

# Learn CEPCSW

中国科学院高能物理研究所  
*Institute of High Energy Physics  
Chinese Academy of Sciences*

WU Kewei

2021/02/26

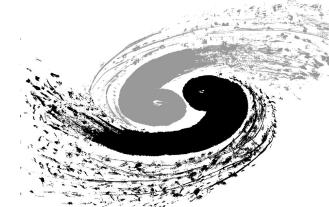

# Quick Start

- Source code: <https://github.com/cepc/CEPCSW>
- Installation:
  - tip: clean up your personal environment variables before installation.

SSH to lxslc7 (CentOS 7).

Before run following commands, please make sure you setup the CVMFS:

```
$ git clone git@github.com:cepc/CEPCSW.git
$ cd CEPCSW
$ git checkout master # branch name
$ source setup.sh
$ ./build.sh
$ ./run.sh Examples/options/helloalg.py
```

# Tutorials

- Web: <https://cepc.github.io/CEPCSW/tutorial.html>
- Indico: <https://indico.ihep.ac.cn/event/12341/>

**New CEPCSW Tutorial and detector study**

17-18 September 2020  
New Building  
Asia/Shanghai timezone

**My Conference**

After the CDR was released in 2018, the CEPC is moving towards its technical design steadily. A new software framework is under developing and various new detector concepts were proposed, which need validation, intensive and sophisticated simulation study, and optimization. The new CEPCSW is designed to meet all these requirements.

This workshop is going to focus on the new CEPCSW. The new software is based on a more generic framework and modern event data model and within very broad international collaboration, which could provide all aspects support for the CEPC to perform R&D and physics study.

This workshop is going to introduce the new software to new comers and help them get involve detector and physics study more smoothly, which is going to cover detector geometry and material implementation, simulation, reconstruction, and a little bit analysis.

**Starts Sep 17, 2020 08:00**  
**Ends Sep 18, 2020 18:00**

# Simulation Framework

- The simulation chain is driven by Gaudi.
- Detector description is from DD4hep.
- Event Data Model is in EDM4hep format.
- Detector response is done by Geant4.

from Lin Tao

# Source Code Framework

- Detector description: See [/Detector](#)
- Event generator interface: See [/Generator](#)
- Detector simulation: See [/Simulation](#)
  - DetSimInterface: Gaudi Tool interface
  - DetSimCore: integrate Gaudi and Geant4
  - DetSimGeom: integrate with DD4hep
  - DetSimAna: collect data from Geant4
  - DetSimSD: detector response
- Job options: See [/Examples/options](#)

from Lin Tao

# Job Option

- Command: \$ ./run.sh Examples/options/tut\_detsim.py
- Services  
([https://github.com/cepc/CEPCSW/blob/master/Examples/options/tut\\_detsim.py](https://github.com/cepc/CEPCSW/blob/master/Examples/options/tut_detsim.py)) :
  - Random Number Service
  - Event Data Service and PODIO writer
  - Geometry Service (geometry\_option = "CepC\_v4-onlyVXD.xml")
  - Physics generator algorithm
  - Detector simulation algorithm
  - Save detector response into ROOT file
  - Control how many events to be simulated
- Visualization: detsimalg.VisMacs = ["\$PATH/vis.mac"]  
(<https://geant4-userdoc.web.cern.ch/UsersGuides/ForApplicationDeveloper/html/Visualization/visualization.html>)

from Lin Tao

# Detector description

➤ Tracker([https://github.com/cepc/CEPCSW/blob/master/Detector/DetCEPCv4/src/tracker/VXD04\\_geo.cpp](https://github.com/cepc/CEPCSW/blob/master/Detector/DetCEPCv4/src/tracker/VXD04_geo.cpp))

➤ DD4hep construction:

- Compact file (xml) to input geometry parameters
- Object prepare
- Parameters input
- Volume placement
- Sensitive detector
  - <readouts>
  - <readout name="TPCCollection">
  - <id>system:5,side:2,layer:9,module:8,sensor:8</id> </readout>
  - </readouts>

➤ Extension output

## Solids

dd4hep	ROOT	Geant4
Box	TGeoBBox	G4Box
Tube	TGeoTube, TGeoTubeSeg	G4Tubs
CutTube	TGeoCutub	G4CutTubs
