# TMVA Setup

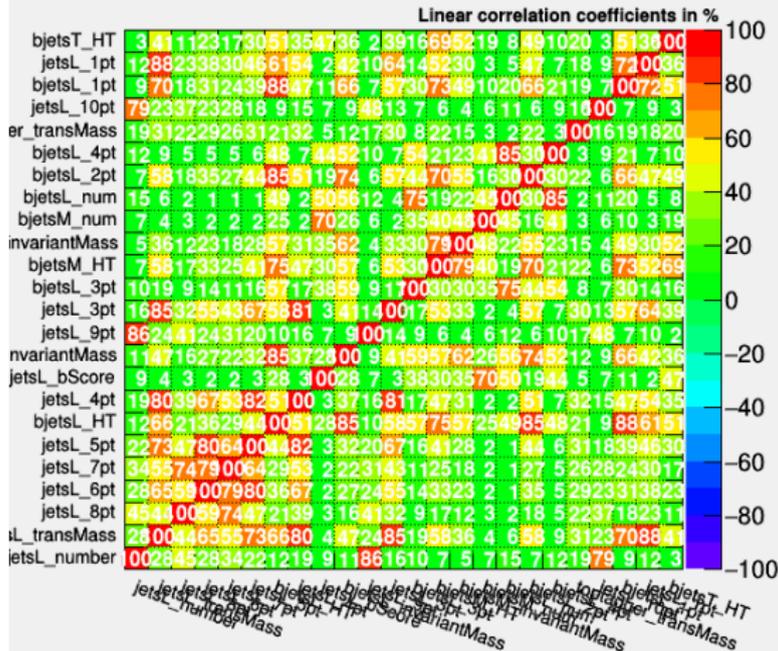

- ROOT6, TMVA4.3.0
- Signal: TTTT\_TuneCP5; Background: TTTo2L2Nu, TTToHadronic, TTToSemiLeptonic
- Global weight and event weight same in event yield calculation
- Input Variables: 24, same as before

# Input Variable Correlation

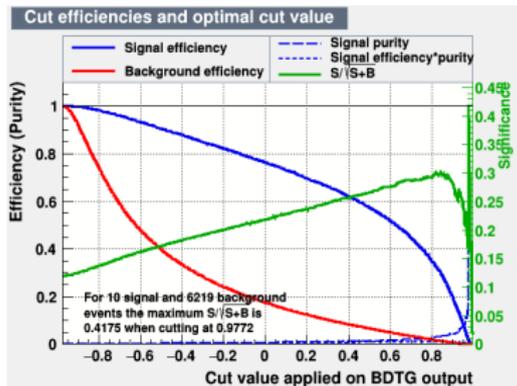

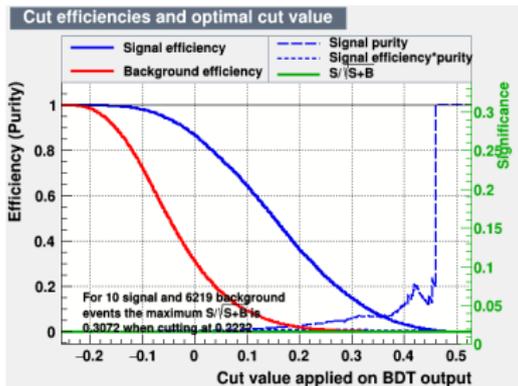

# Input Variable Correlation

## Correlation Matrix (background)

# Significance

- because I am using ROOT6 now, the TMVA interface is a bit different than root5
- Significance plot seems strange, don't know how to fix this yet .
- here only TT bg is considered, should add other bg especially QCD.
