

Polarised ^3He in neutron polarisation instrumentation at the European Spallation Source

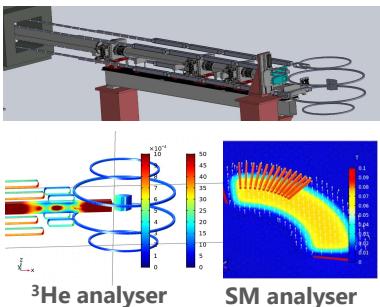

Wai Tung Lee, European Spallation Source

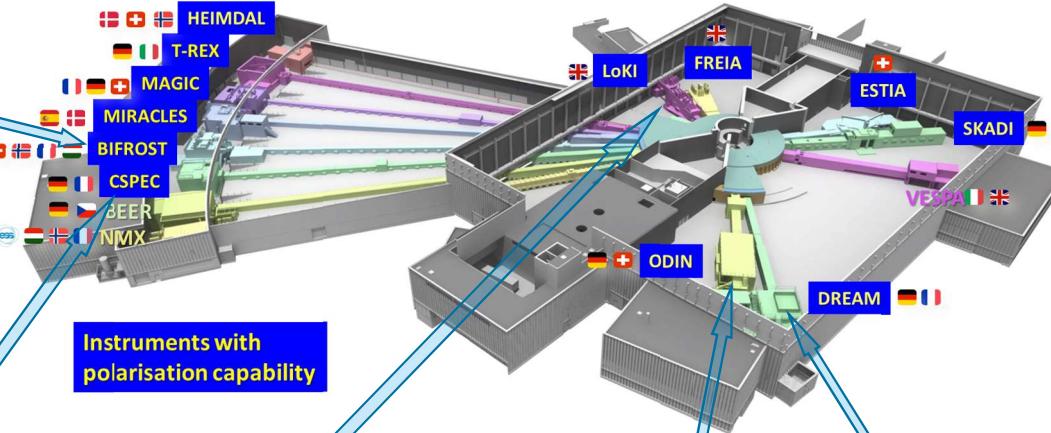

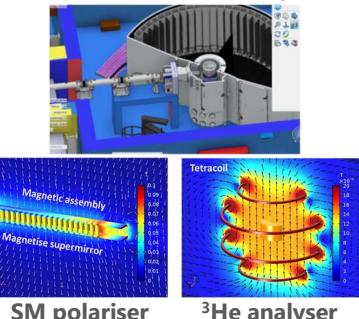

- Polarisation: 12 of 15 approved instruments. 7 of first-8 instruments. Beam-on-target 2024. User program 2025.
- Polarised ^3He : 10 of 15 approved instruments. 5 of first-8 instruments (shown below).
- 4 spectrometers, 2 diffractometers, 2 SANS, 1 reflectometer, 1 imaging.

Both MEOP and SEOP will be used.

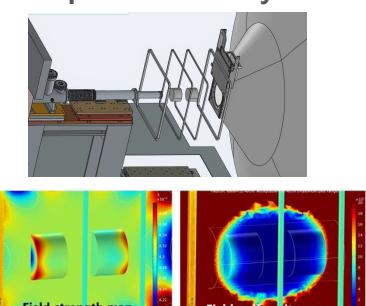

BIFROST (Spectroscopy) (1)
SM polariser, SM/ ^3He analyser

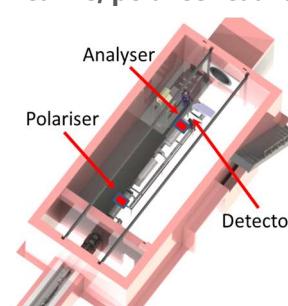

CSPEC (Spectroscopy) (1)
SM polariser, 3^{He} analyser

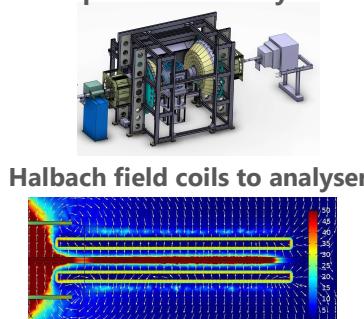

LoKI (SANS) (2)
3^{He} polariser & analysers

ODIN (Imaging) (2)
SM & 3^{He}, polariser & analyser

DREAM (Diffraction) (3)
3^{He} polariser & analysers

At present, we are

- Designing polarisation setup for instruments.
- Setting up Polarisation and Neutron Optics laboratory and other infrastructure.
- Building equipment prototypes.
- Making polarisation roll-out plans and establishing collaborations.

Deployments match to instrument schedules.
