Motivation

- The decays of the η/η' meson are of interest as probes of some aspects of the strong interaction, and also as sources of information on physics beyond the standard model.
- Many theorists have proposed many models to explain the decay mechanism of $\eta' \rightarrow 4\pi$ when η' was discovered. Within the framework of the quark model, the decay rate of $\eta' \rightarrow 4\pi$ (including $\eta' \rightarrow \pi^+\pi^-\pi^+\pi^-$ and $\eta' \rightarrow \pi^+\pi^-\pi^0\pi^0$) was predicted to be $\Gamma(\eta' \rightarrow 4\pi) = 2.4 \times 10^{-4} \text{ MeV}$ [1]. Experimentally CLEO Collaboration reported the branching fraction upper limits are presented to be $\mathcal{B}(\eta' \rightarrow \pi^+\pi^-\pi^+\pi^-) < 2.4 \times 10^{-4}$ and $\mathcal{B}(\eta' \rightarrow \pi^+\pi^-\pi^0\pi^0) < 2.6 \times 10^{-3}$, which contradicts the prediction of the quark model.
- A sample of $10047.9 \times 10^6 J/\psi$ events was collected with the BESIII detector since 2017, which allows us to search for $\eta' \rightarrow 4\pi$ with a higher sensitivity. We can compare that with previous measurements, The correctness of chiral perturbation theory and vector meson model to describe decay properties of $\eta' \rightarrow \pi^+\pi^-\pi^+\pi^-$ and $\eta' \rightarrow \pi^+\pi^-\pi^0\pi^0$ is further verified.

Data Samples and MC Simulation

➤BOSS version: 7.0.8

➤Data sample: 1312M J/ψ taken in 2009 and 2012

➤Inclusive MC: 1225M J/ψ Inclusive MC in 2009 and 2012

➤Signal MC:

2009 : 2012=1 : 5 total 300k for $J/\psi \rightarrow \gamma\eta'$, $\eta' \rightarrow \pi^+\pi^-\pi^+\pi^-$ and $J/\psi \rightarrow \gamma\eta'$, $\eta' \rightarrow \pi^+\pi^-\pi^0\pi^0$ respectively.

Analysis of $\eta' \rightarrow \pi^+ \pi^- \pi^+ \pi^-$

Initial Event selection

Good charged tracks

■ $|V_r| < 1.0\text{cm}, |V_z| < 10.0\text{cm}, |\cos\theta| < 0.93$

■ $N=4, N_p = N_m = 2$

PID for pion

■ $\text{Prob}(\pi) > \text{Prob}(K) \text{ and } \text{Prob}(\pi) > \text{Prob}(P)$

Good Photons

■ $E_{\text{barrel}} > 25\text{MeV}, |\cos\theta| < 0.8$

■ $E_{\text{endcap}} > 50\text{MeV}, |\cos\theta| \in (0.86, 0.92)$

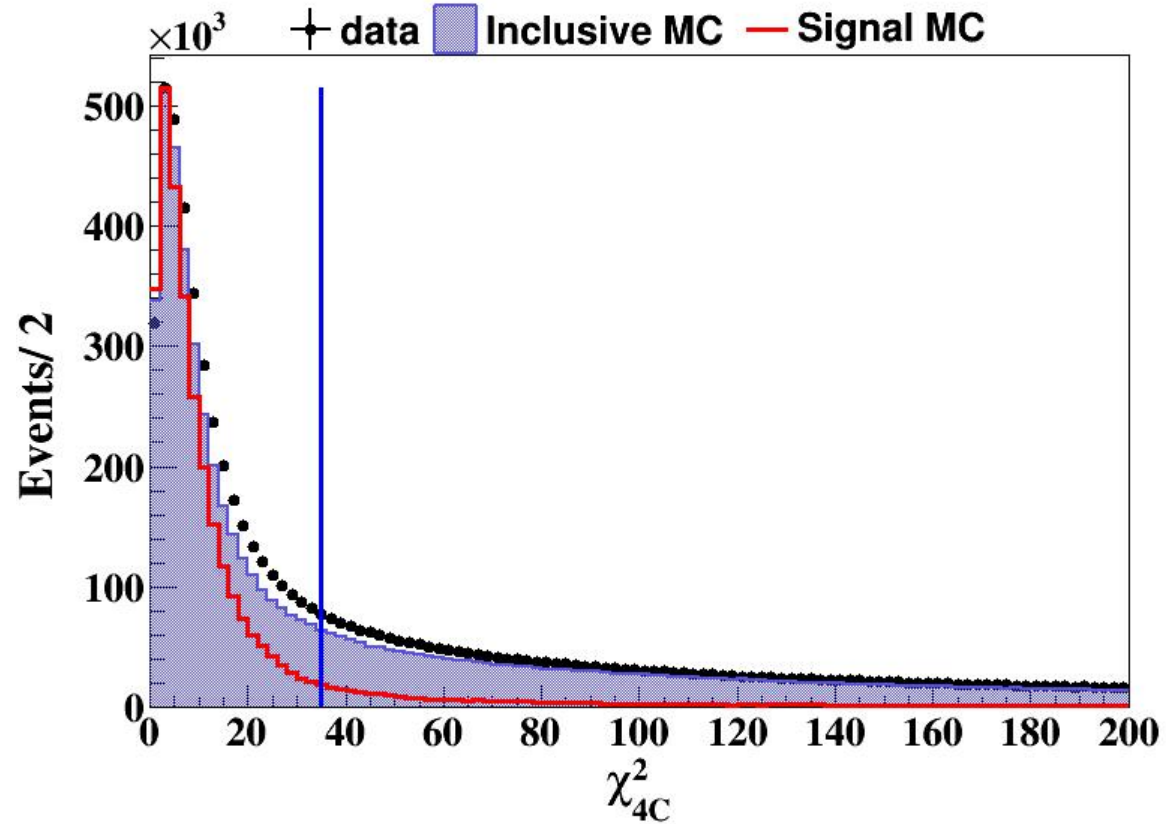

■ The Timing information from EMC: $0 \leq t \leq 14$

■ $N_\gamma \geq 1$

4C kinematic with $J/\psi \rightarrow \gamma\pi^+\pi^-\pi^+\pi^-$

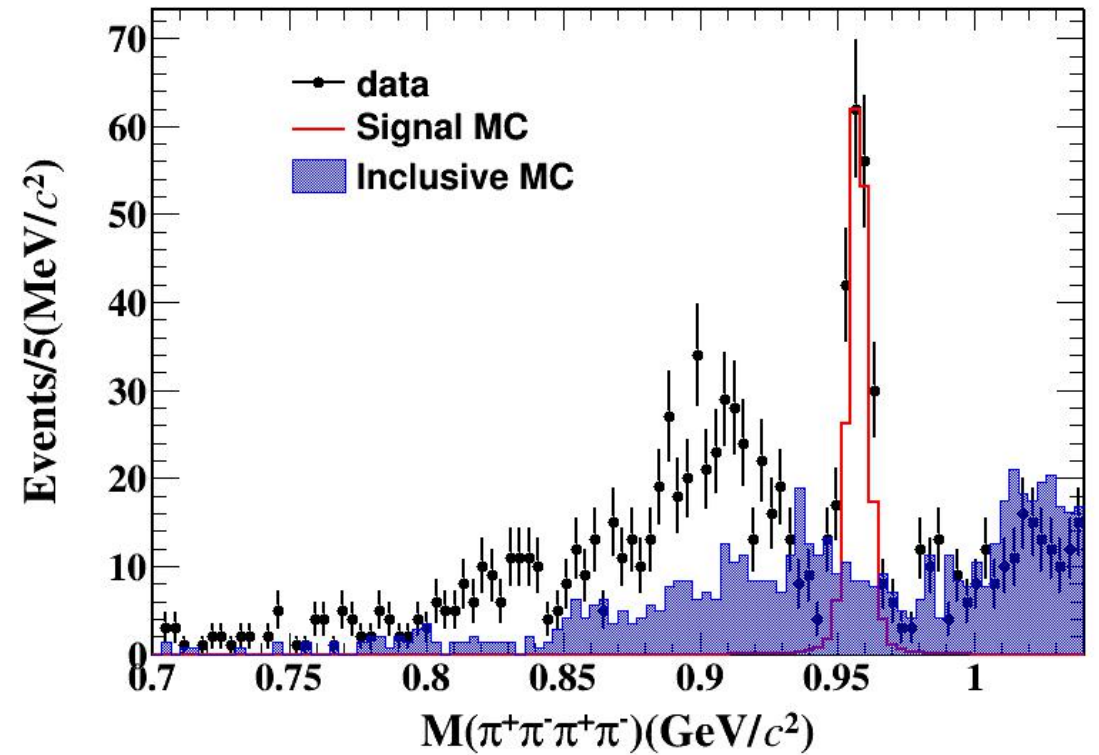

- Additional 4C Kinematic fit for $\gamma\gamma\pi^+\pi^-\pi^+\pi^-$ final states.

Event selection

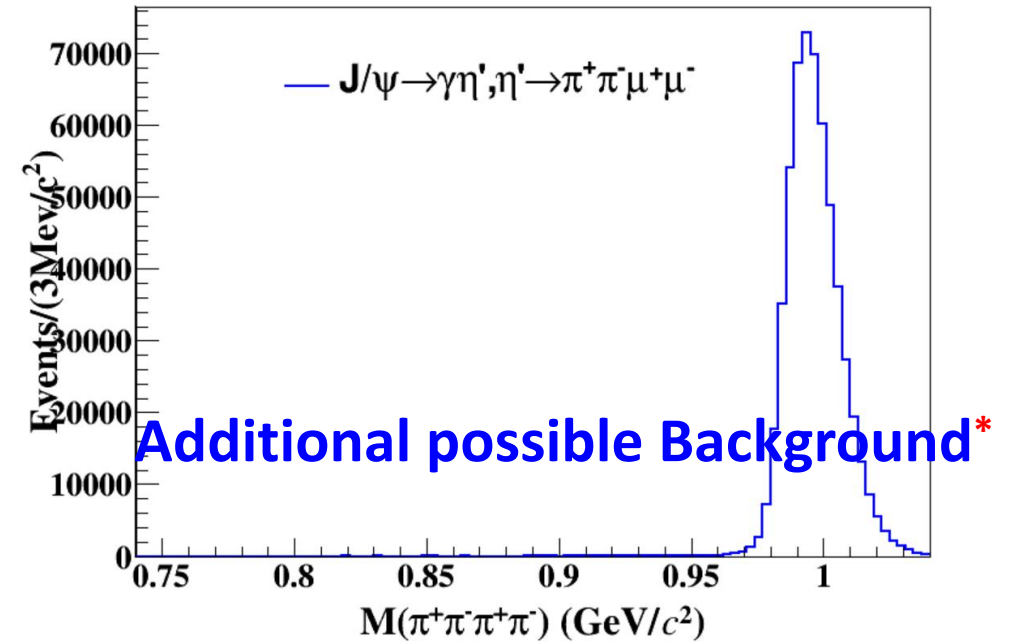

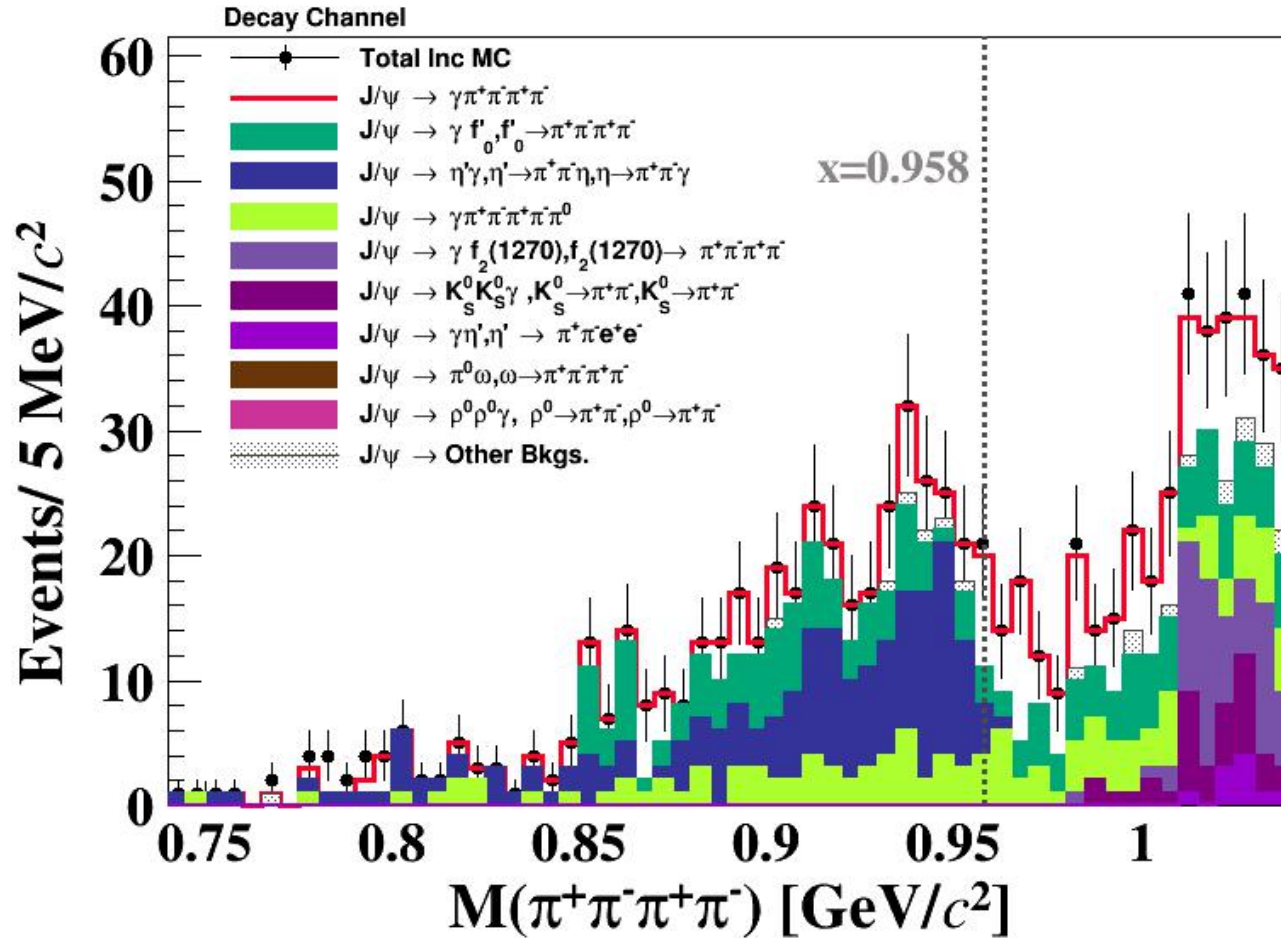

➤ $\chi^2_{4C} < 35$

➤ $\chi^2_{4C}(\gamma\pi^+\pi^-\pi^+\pi^-) < \chi^2_{4C}(\gamma\gamma\pi^+\pi^-\pi^+\pi^-)$

Background Study

Fitting result of $M(\pi^+\pi^-\pi^+\pi^-)$

□ Significance: 20.2σ

■ Signal: PDF shape

■ Background :

PDF shape of peak background($J/\psi \rightarrow \gamma\pi^+\pi^-\pi^+\pi^-$),

PDF shape of peak background($J/\psi \rightarrow \gamma\eta', \eta' \rightarrow \pi^+\pi^-\eta, \eta \rightarrow \pi^+\pi^-\gamma$),

PDF shape of peak background($J/\psi \rightarrow \gamma\eta', \eta' \rightarrow \pi^+\pi^-e^+e^-$),

PDF shape of peak background($J/\psi \rightarrow \gamma\eta', \eta' \rightarrow \pi^+\pi^-\mu^+\mu^-$)

fixed BW convolution Gaussian function of $f_2(1270)$.

$$\mathcal{B}(\eta' \rightarrow \pi^+\pi^-\pi^+\pi^-) = \frac{N_{sig}}{N_{J/\psi} \cdot \mathcal{B}(J/\psi \rightarrow \gamma\eta') \cdot \varepsilon}$$

Mode	N_{sig}	$\varepsilon(\%)$	$\mathcal{B}(\times 10^{-5})$
$\eta' \rightarrow \pi^+\pi^-\pi^+\pi^-$	187.3 ± 15.8	33.29	$8.35 \pm 0.70(stat)$

Analysis of $\eta' \rightarrow \pi^+ \pi^- \pi^0 \pi^0$

Initial Event selection

Good charged tracks

- $|V_r| < 1.0\text{cm}, |V_z| < 10.0\text{cm}, |\cos\theta| < 0.93$
- $N=2, N_p = N_m = 1$

PID for pion

- $\text{Prob}(\pi) > \text{Prob}(K) \text{ and } \text{Prob}(\pi) > \text{Prob}(P)$

Good Photons

- $E_{\text{barrel}} > 25\text{MeV}, |\cos\theta| < 0.8$
- $E_{\text{endcap}} > 50\text{MeV}, |\cos\theta| \in (0.86, 0.92)$
- The Timing information from EMC: $0 \leq t \leq 14$
- $N_\gamma \geq 5$

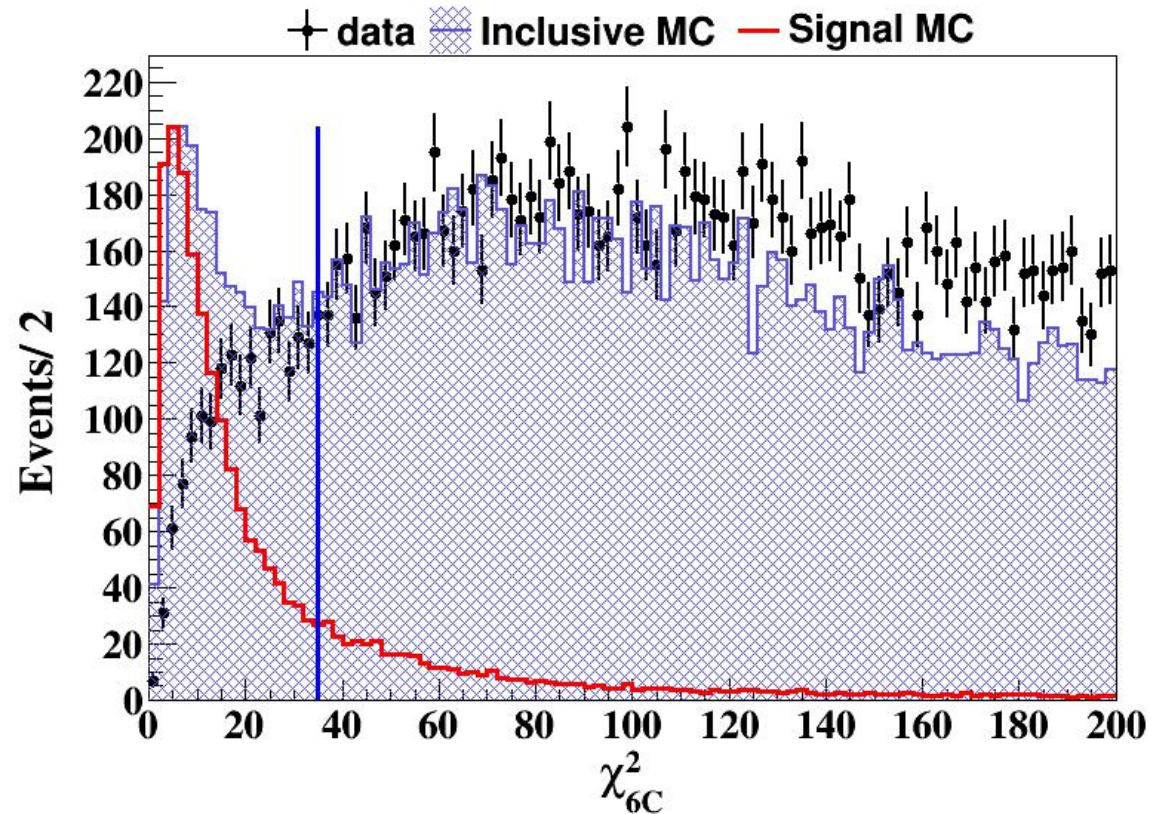

1C kinematic for π^0

A kinematic fit is performed on the selected photon pairs by constraining their invariant mass to the π^0 mass.

6C kinematic with $J/\psi \rightarrow \pi^+\pi^-\gamma\gamma\gamma\gamma$.

- Additional 6C Kinematic fit for $\gamma\pi^+\pi^-\pi^0\pi^0$ and $\gamma\gamma\pi^+\pi^-\pi^0\pi^0$ final states.

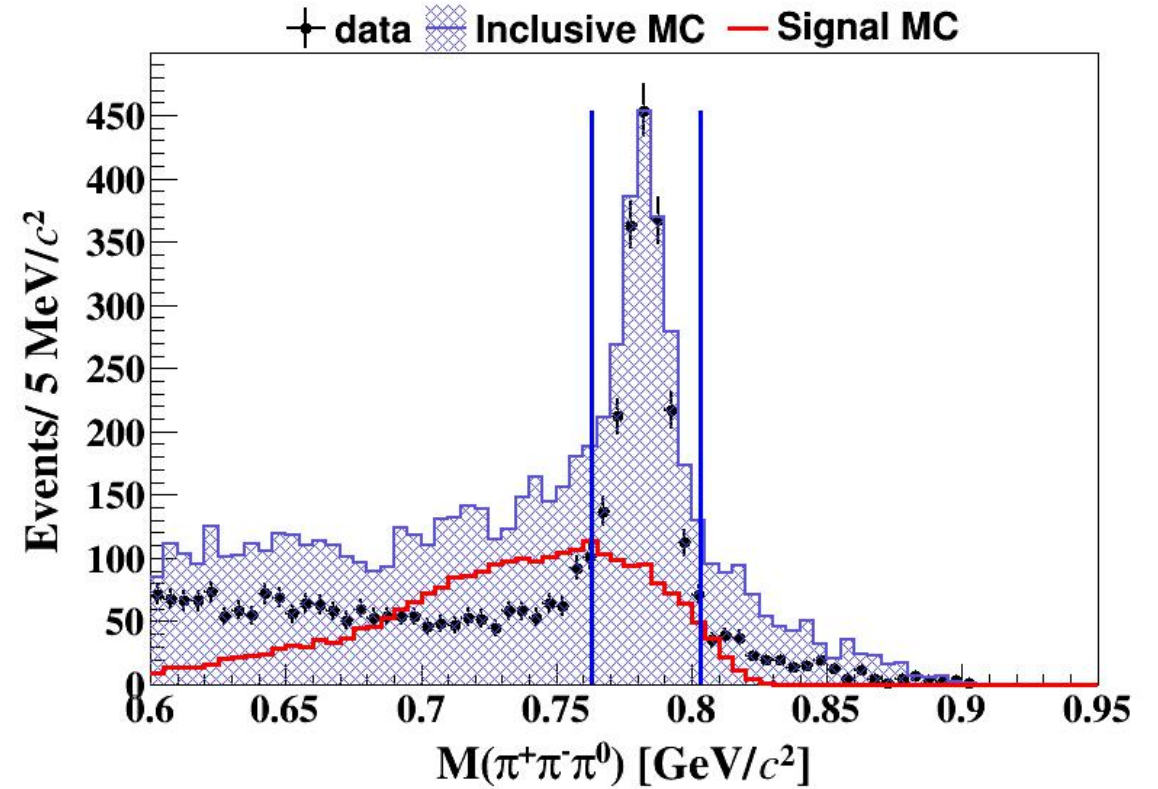

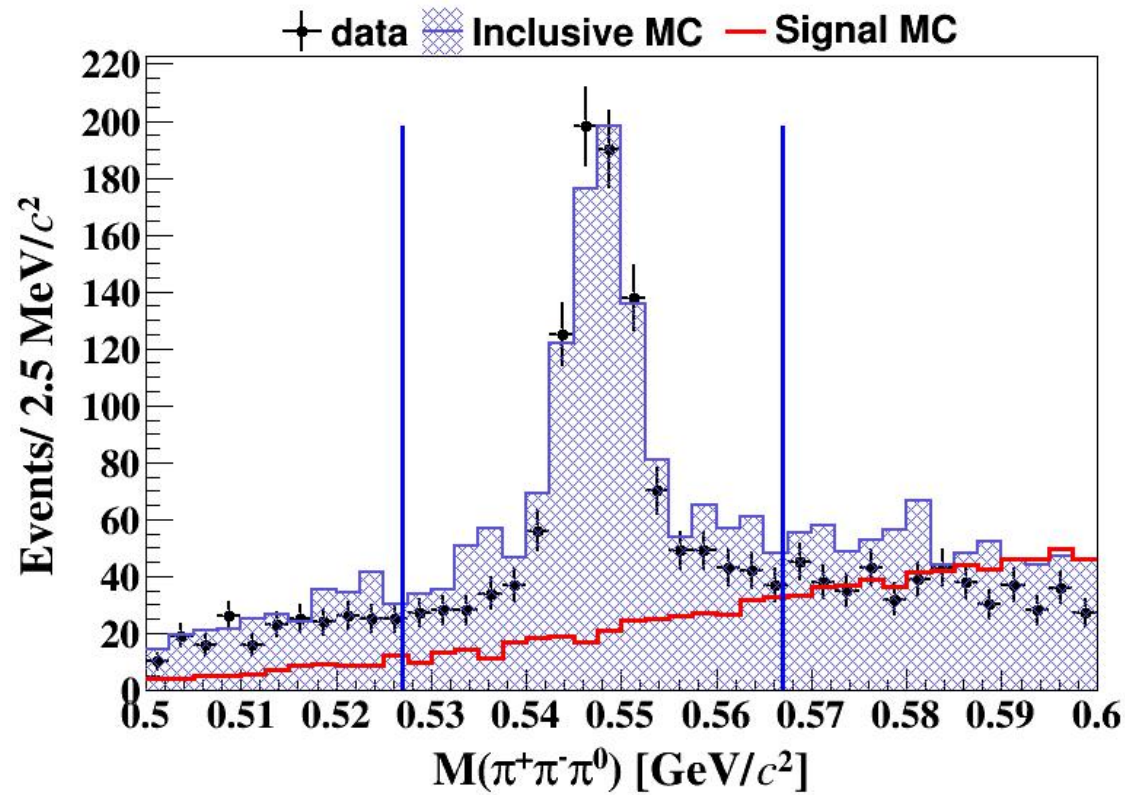

Further Event selection(I)

■ $\chi^2_{6C} < 35$

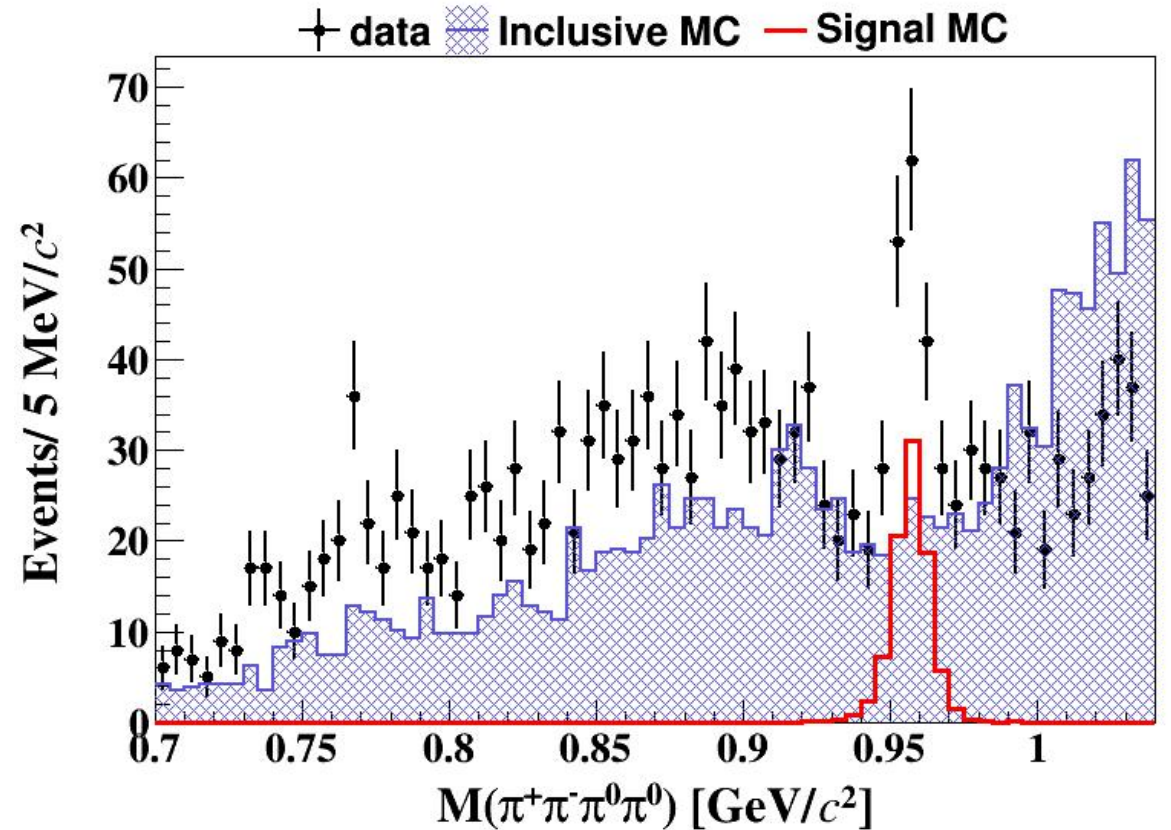

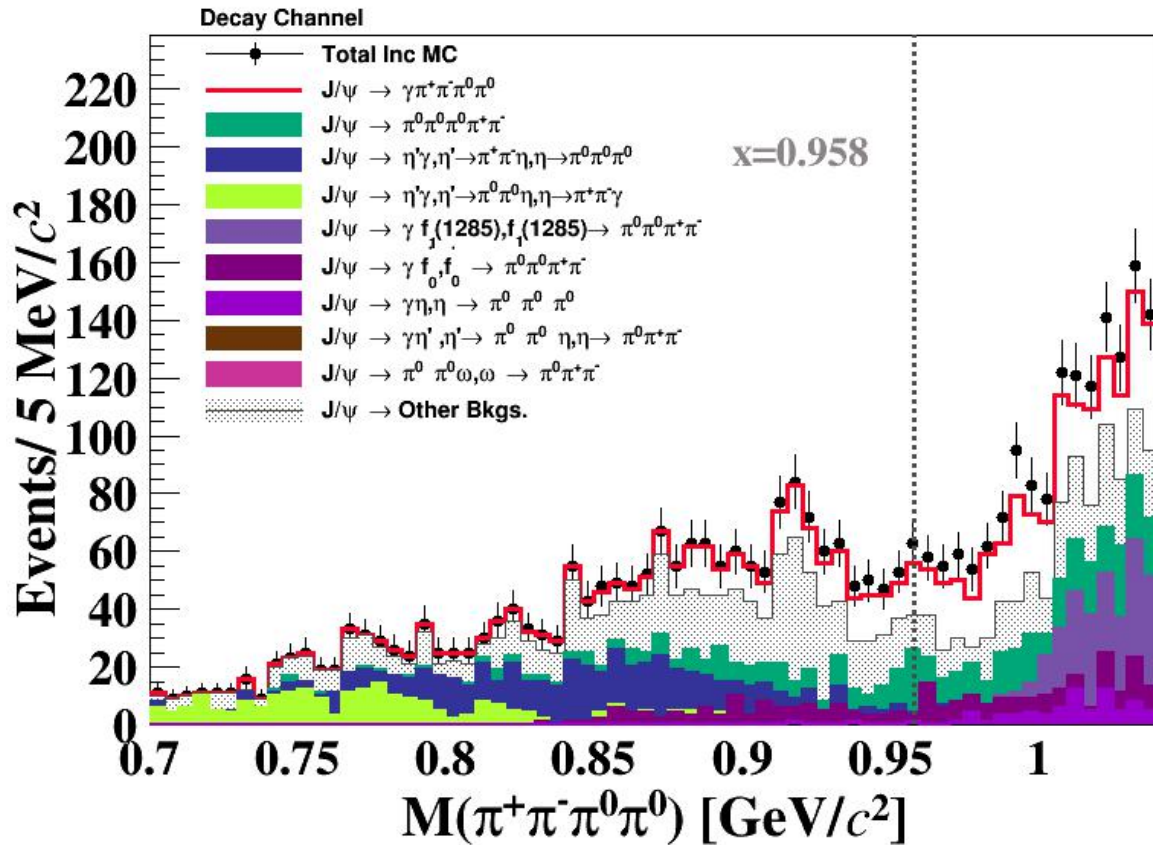

■ $\chi^2_{6C}(\gamma\pi^+\pi^-\pi^0\pi^0) < \chi^2_{6C}(\gamma\gamma\pi^+\pi^-\pi^0\pi^0)$

Further Event selection(II) Veto on $\eta/\omega \rightarrow \pi^+\pi^-\pi^0$

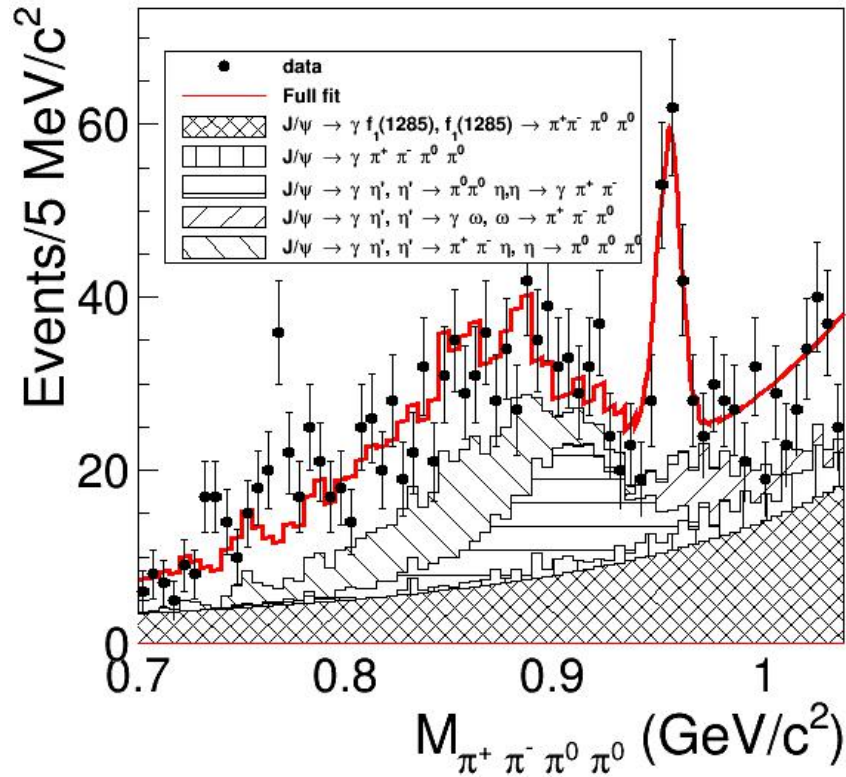

Background Study

➤ After all the selections, the rest of inclusive MC sample is listed:

Fitting result of $M(\pi^+\pi^-\pi^0\pi^0)$

Significance: 8σ

Background :

PDF shape of peak background ($J/\psi \rightarrow \gamma \pi^+\pi^-\pi^0\pi^0$), ($J/\psi \rightarrow \gamma \eta', \eta' \rightarrow \pi^+\pi^-\eta, \eta \rightarrow \pi^0\pi^0\pi^0$), ($J/\psi \rightarrow \gamma \eta', \eta' \rightarrow \pi^0\pi^0\eta, \eta \rightarrow \pi^+\pi^-\gamma$) and ($J/\psi \rightarrow \gamma \eta', \eta' \rightarrow \gamma \omega, \omega \rightarrow \pi^+\pi^-\pi^0$), fixed BW convolution Gaussian function of $f_1(1285)$.

$$B(\eta' \rightarrow \pi^+\pi^-\pi^0\pi^0) = \frac{N_{sig}}{N_{J/\psi} \cdot B(J/\psi \rightarrow \gamma \eta') \cdot \epsilon \cdot B(\pi^0 \rightarrow \gamma \gamma) B(\pi^0 \rightarrow \gamma \gamma)}$$

$$= \frac{103.9}{13.1254 \times 10^8 \times 0.075 \times 5.16 \times 10^{-3} \times 0.98^2}$$

Mode	N_{sig}	$\epsilon(\%)$	$B(\times 10^{-4})$
$\eta' \rightarrow \pi^+\pi^-\pi^0\pi^0$	103.9 ± 15.6	7.5	$2.12 \pm 0.31(stat)$

Summary & Next to do

Using 1312M J/ψ data sample collected at BESIII in 2009 and 2012

✓ The branching fraction of $\eta' \rightarrow \pi^+\pi^-\pi^+\pi^-$ and $\eta' \rightarrow \pi^+\pi^-\pi^0\pi^0$ is performed a measurement.

Mode	N_{sig}	$\varepsilon(\%)$	$Br(\eta' \rightarrow X)$ (this work)	Significance(σ)	$Br(\eta' \rightarrow X)^1$ (pre.result)
$\eta' \rightarrow \pi^+\pi^-\pi^+\pi^-$	187.3 ± 15.8	33.29	$(8.35 \pm 0.70(stat)) \times 10^{-5}$	20.2	$(8.41 \pm 0.68(stat)) \times 10^{-5}$
$\eta' \rightarrow \pi^+\pi^-\pi^0\pi^0$	103.9 ± 15.6	7.5	$(2.12 \pm 0.31(stat)) \times 10^{-4}$	8	$(1.90 \pm 0.36(stat)) \times 10^{-4}$

✓ The result is consistent with PDG value.

Next to do

- Add 2018 and 2019 J/ψ data samples
- Finish systematic uncertainty

THANKS!😊
