Trigger studies

F. lemmi

Introduction

UL2016_pre-
VFP

UL2016_postVFP

Conclusions

- Goal is to **repeat previous trigger studies**
- Hopefully no major changes when switching to UL
- **UL2016 pre/postVFP** are downloaded and ready $\implies$ start from them
- Today's **plots** are **almost final**
- **Apply** needed **SFs**:
 - Muon ID
 - **No ele ID**: select events with $== 1$ leptons, $== 1$ muon
 - Tau ID
 - b tagging
 - Evt weight, PU weight, prefiring weight
- **Missing ingredients**:
 - Applying BTagShapeCalibration SF, should be FixedWP instead
 - Apply ttbb correction
 - **Bug in reading of JSON file** spotted by ZhangYu. Fixed, thanks!

Trigger studies

F. Lemmi

Introduction

UL2016_pre-
VFP

UL2016_postVFP

Conclusions

Pre-UL results

- nJets vs H_T trigger efficiency
- Left: data/MC efficiency ratio; right: corresponding errors
- **Add $H_T > 400$ GeV cut to analysis selection** to make trigger efficient
- Use these histograms as **trigger efficiency scale factors and uncertainties**

Introduction

UL2016_pre-
VFP

UL2016_postVFP

Conclusions

UL2016 preVFP

1D trigger efficiency plots

- Trigger choice: unchanged wrt preUL
- OR of:
 - HLT_PFHT450_SixJet40_BTagCSV_p056
 - HLT_PFHT400_SixJet30_DoubleBTagCSV_p056
 - HLT_PFJet450
- Reference triggers: OR of
 - HLT_IsoMu24
 - HLT_IsoMu27
- Selection:
 - Preselection
 - $== 1 \ell, == 1 \mu$
 - Designed to have reference firing

Trigger studies

F. lemmi

Introduction

UL2016_pre-VFP

UL2016_postVFP

Conclusions

2D plots: checking the reference trigger

- nJets vs H_T trigger efficiency
- Left: MC/MCtruth efficiency ratio; right: corresponding errors
- The reference is unbiased in 2D too above 400/500 GeV

Trigger studies

F. lemми

Introduction

UL2016_pre-VFP

UL2016_postVFP

Conclusions

2D plots: trigger efficiency in data

- nJets vs H_T trigger efficiency in data
- Left: trigger efficiency; right: corresponding errors
- Some bins have low efficiency

Trigger studies

F. lemми

Introduction

UL2016_pre-VFP

UL2016_postVFP

Conclusions

2D plots: trigger efficiency in MC

- nJets vs H_T trigger efficiency in data
- Left: trigger efficiency; right: corresponding errors
- Efficiency higher in MC

Trigger studies

F. lemми

Introduction

UL2016_pre-VFP

UL2016_postVFP

Conclusions

2D plots: data/MC efficiency ratio

- nJets vs H_T data/MC efficiency ratio
- Left: trigger efficiency; right: corresponding errors
- Not very different from previous results
- Somehow bigger errors and a bit more spiky (lower data stats?)

Summary and next step

Trigger studies

F. Lemmi

Introduction

UL2016_pre-VFP

UL2016_postVFP

Conclusions

- **Results** look **simila to** what we saw in **pre-UL**
- Plots **a bit more spiky** and having bigger uncertainties
 - Most likely due to splitting of data samples
 - Also, bug when reading JSON: I think we are loosing some data! Fixing it will probably help
- **Plans:**
 - **Update** that couple of open items (b tag SFs, ttbb)
 - **Run on fixed data**
 - Do not expect dramatic changes
 - **2018** is ready: submit jobs and **repeat study** there
