## Prospects

- The Belle II has taken $423 \mathrm{fb}^{-1}$ of data, ~ equaling BaBar sample. Detector works well, many analysis in progress.
- Belle II results is directly competitive with previous B factories $\checkmark$ Improvements in detector and trigger
$\checkmark$ Powerful analysis strategies
$\checkmark$ Fruitful results with early Belle II data

## $\mathbf{X}(3872)$

- Strange $\mathbf{X}(\mathbf{3 8 7 2})$
$\checkmark$ Narrow, very close to DD* threshold $\checkmark$ No place @ charmonium potential model
