

Light Meson decays at BESIII

Wednesday, 17 August 2022 18:05 (10 minutes)

The world's largest sample of J/ψ events accumulated at the BESIII detector offers a unique opportunity to investigate η and η' physics via two body J/ψ radiative or hadronic decays. In recent years the BESIII experiment has made significant progresses in η/η' decays. A selection of recent highlights in light meson spectroscopy at BESIII are reviewed in this report, including the observation of $\eta \rightarrow \pi^+\pi^-\mu^+\mu^-$, observation of the cusp effect in $\eta \rightarrow \pi^0\pi^0\eta$, search for CP-violation in $\eta \rightarrow \pi^+\pi^-e^+e^-$, as well as the precision measurement of the branching fraction of η decays.
