

ML at IHEP ATLAS: Status and plans

Yaquan Fang (IHEP) on behalf of IHEP ATLAS team

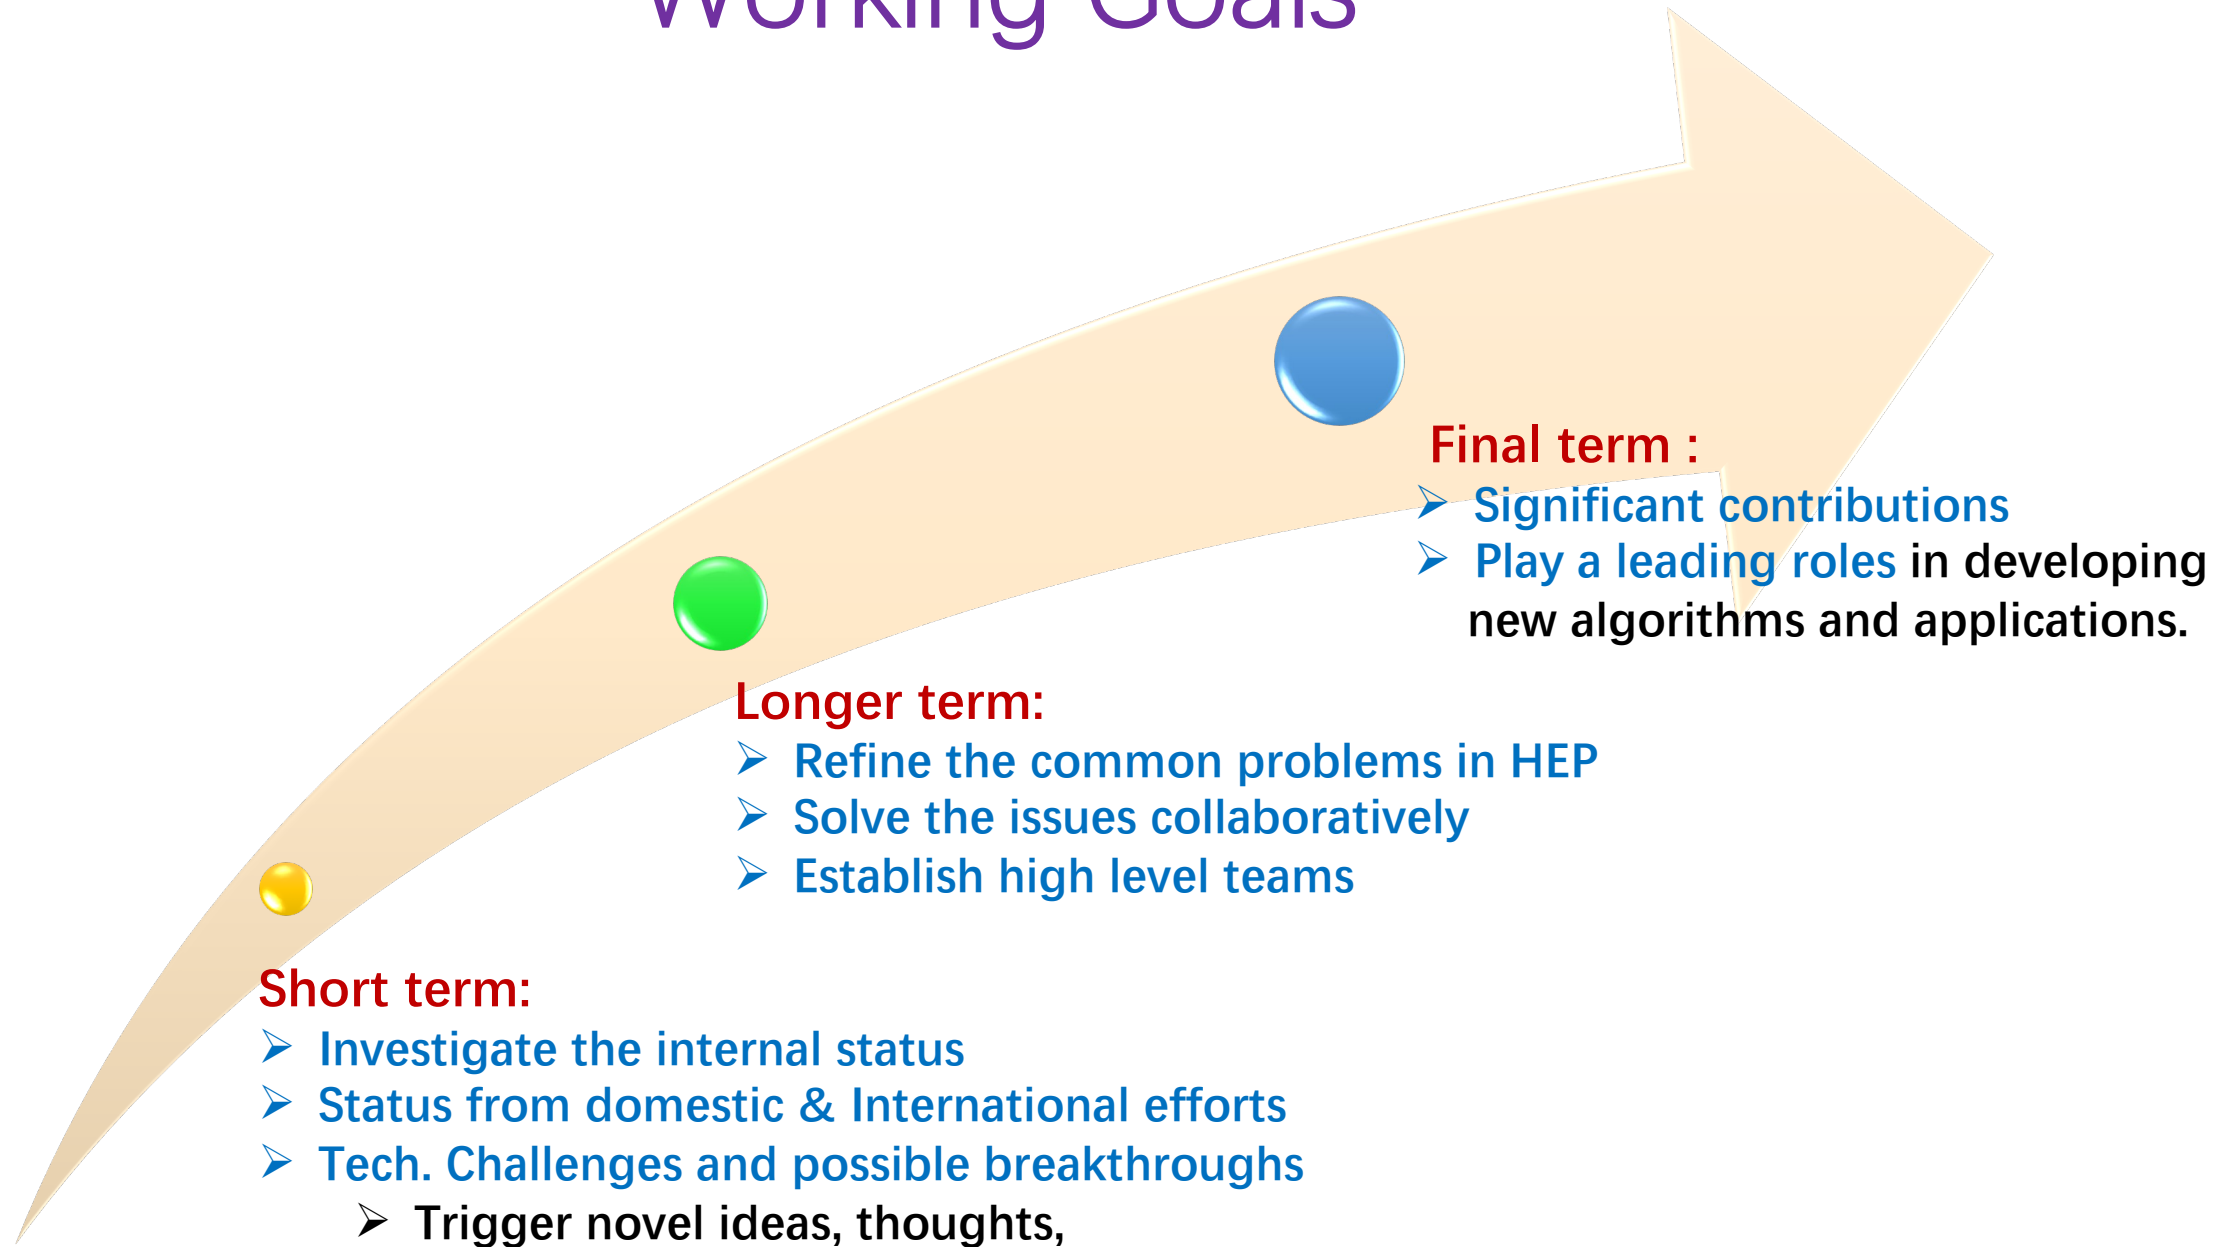

机器学习技术在高能物理中的应用研讨会

September 18th, 2022

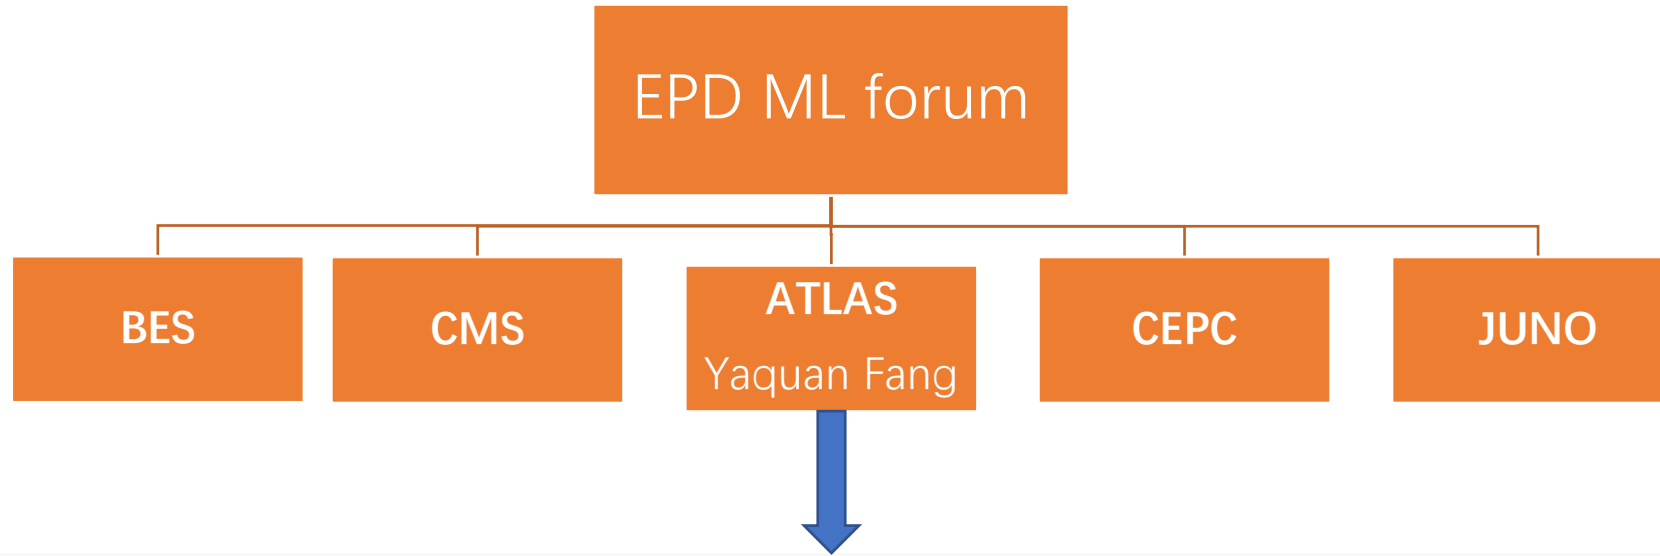

Motivation

- **Various developments and progresses are distributed in different projects (e.g. LHC, BES, Juno ...).**
 - However, the efforts are scattering.
- **Is it possible to work together to solve the common needs systematically for each project?**
 - Identify the frontiers of ML in particle physics, especially in the facilities of the big sciences?
 - Are there any common issues & technologies?
- **Can we play a leading role/roles in ML/AI applications in high energy physics?**
 - So far, we are mostly following
 - What can we do to make significant scientific contributions to ML/AI at the worldwide level?
 - How to quantify our leaderships?

Working Goals

Plan to establish the efforts

Participate the discussions:

- ✓ Identify physics issues.
- ✓ Human resources : welcome junior faculties, postdocs and students.
- ✓ Computing resources needed.
- ✓ Cooperation with ATLAS ML forum.
- ✓ Cooperation with other ML societies.
- ✓ Others

Mattermost: <https://mattermost.ihep.ac.cn/atlas/channels/machine-learning>

ATLAS Machine Learning Forum (AML)

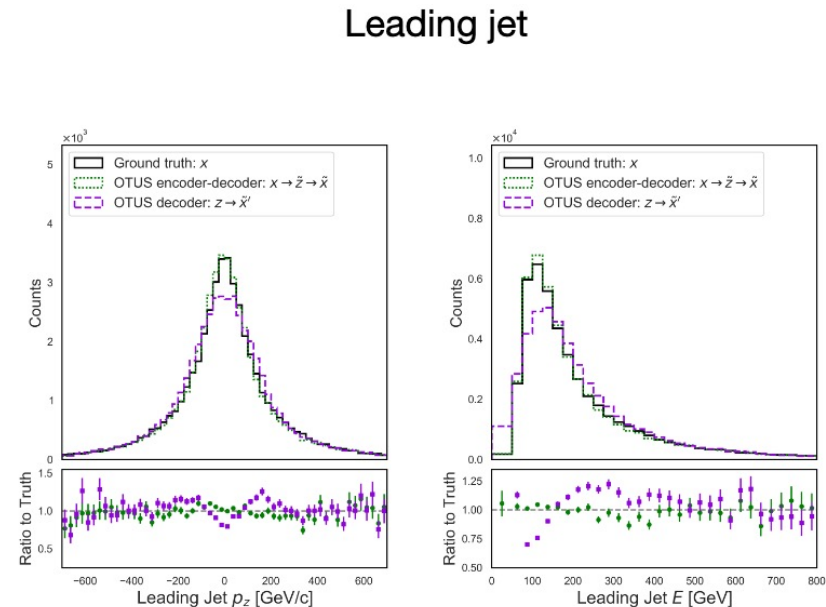

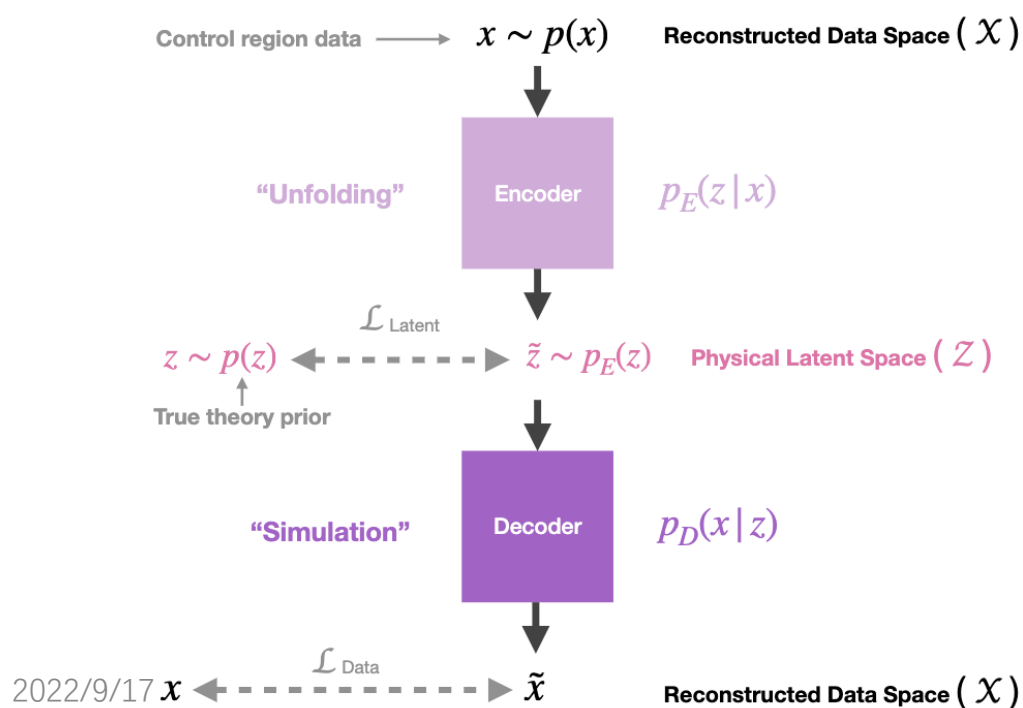

- **This forum is jointly organized by Software and Computing (S&C) and Physics and Computing Coordinators for the goals of:**
 - Communications and liaisons inside/outside ATLAS:
 - **Organizing ML workshops every year and the bi-week meetings.**
 - **Topics in the bi-weekly meetings: Reports from physics group liaisons; specific applications.**
 - **Organizing tutorials for ATLAS users.**
 - **Liaising with other groups inside and outside ATLAS, facilitating collaboration with Machine Learners.**
 - **Forum for all ATLAS people: atlas-talk, twiki.**
 - Supporting ML tools and techniques:
 - **Coordinating development of common ML tools.**
 - **Establishing standards where useful.**
 - **Providing advice on new ML tools and best tools for specific applications.**

Machine Learning application (ATLAS)

- **Method and packages: encourage people to use non-HEP tools [\[twiki\]](#).**
 - Interexperimental Machine Learning [Pages](#) and [resource lists](#).
- **Do NOT recommend running trainings within analysis environment, but:**
 1. Produce a minimal "flat" dataset using the standard ATLAS workflow
 2. Run training in a stand-alone environment
 3. (Optionally) port trained algorithms back to Analysis/Reconstruction releases via [ONNXruntime](#). [\[tutorial\]](#)
- **Computing resources at CERN:**
 - Tools for flat dataset production: [HDF5Utils](#) for DAOD/AOD and uproot for [ntuples](#).
 - For distributed training: [intelligent Data Delivery Service](#).
 - Docker images: [ATLAS Machine Learning docker](#), [minimalist images](#).
 - GPU and notebook: [JupyterHub at CERN](#) and [GPU queues](#).

ML application in ATLAS (1)

- Optimal Transport based Unfolding and Simulation ([OTUS](https://arxiv.org/abs/2101.08944)) [arxiv: 2101.08944](https://arxiv.org/abs/2101.08944)
 - A data-driven ML simulator with altering Variational Auto-encoders (VAEs): predict the **reco-level data (X)** from **parton interactions (Z)**. GANs only mimic the X but not learn the transformation $Z \rightarrow X$
 - Design the loss: Latent loss + Data loss + any additional physically motivated constraints.
 - Extra bonus: unfolding mapping from data to truth.

$pp \rightarrow t\bar{t}$

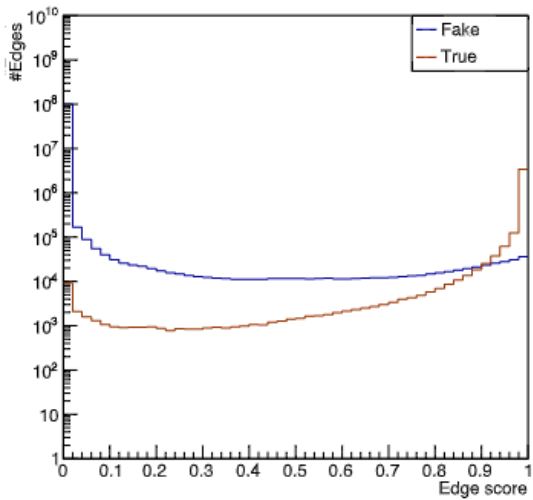

ML application in ATLAS (2)

- Track reconstruction algorithm with GNN in HL-LHC:
 - Connect the hits and select the truth track from all connections (edge in graph).
 - Reduce the connections with detector module maps and geometric cuts for less memory.

[arXiv:2103.0091](https://arxiv.org/abs/2103.0091)

[arXiv:2003.11603](https://arxiv.org/abs/2003.11603)

Edges classification score
(on a test dataset)

Track reconstruction efficiency vs. η

Track reconstruction efficiency vs. p_T

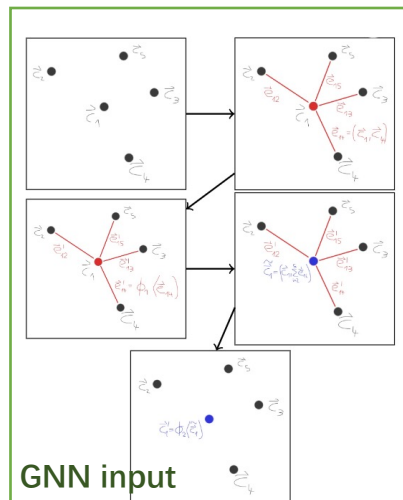

ML application in ATLAS (3)

- Object identification with ML:
 - Electron ID with [high level features + DNN](#), low level features + [CNN/GNN](#).
 - Jet tagging for [b-jet](#), [c-jet](#), [di-tau](#), [gluon](#) and [bosons](#).
 - Similar procedure: select the input information and proper method, tune it and get the result.
 - Take e-ID as example:
 - High level info + multi-class: DNN.
 - Low level cell info (hit maps): CNN.
 - Low level cell info (hit structure): GNN.

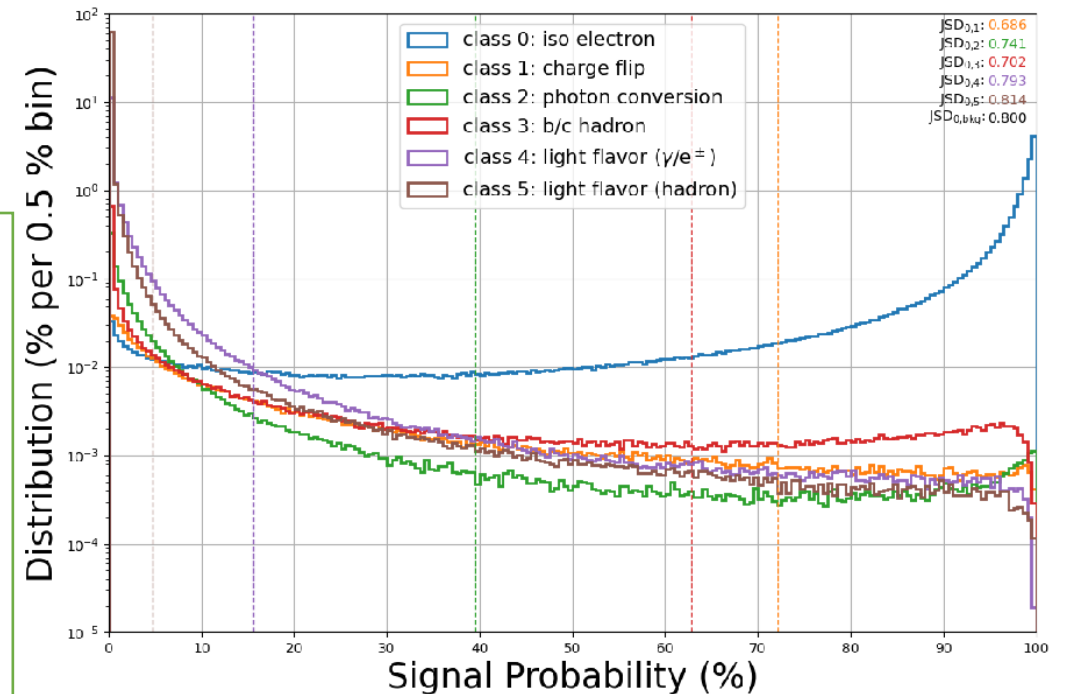

Scalars				
E_{ratio} (1)	$\Delta\phi_{res}$ (6)	f_3 (11)	qd0Sig (16)	E/p_T (21)
R_η (2)	ndof (7)	sct wt charge (12)	n_{Tracks} (17)	E/p (22)
R_{had} (3)	$\Delta p/p$ (8)	w_{p2} (13)	Nb of SCT hits (18)	w_{stot} (23)
$R_{had(1)}$ (4)	$\Delta\eta_1$ (9)	d_0 (14)	η (19)	n_{Pixel} (24)
R_ϕ (5)	f_1 (10)	$d_0/\sigma(d_0)$ (15)	p_t (20)	TRTPID (25)

CNN classification performance

Activities

IHEP ATLAS ML kickoff meeting

<https://indico.ihep.ac.cn/event/17736/> Sep 13th

IHEP ATLAS ML kick off meeting (多学科618房间)		
Tuesday Sep 13, 2022, 2:00 PM → 4:40 PM Asia/Shanghai		
Description https://mattermost.ihep.ac.cn/atlas/channels/machine-learning		
Zoom number: 5368708448		
2:00 PM → 2:05 PM	Introduction Speaker: Yaquan FANG Yaquan (高能所)	5m
2:10 PM → 2:30 PM	Status of the ML studies in ATLAS Speaker: Fangyi Guo	20m
2:30 PM → 2:50 PM	Computing resources for ML Speakers: 京燕石 (高能所), 晓飞 Yan (IHEP)	20m
2:50 PM → 3:05 PM	particleNet in CEPC Higgs tagging and plan for ATLAS Speaker: Shudong Wang (高能所)	15m
3:05 PM → 3:25 PM	Status of Quantum ML with Wuyan and Simulators Speakers: Abdulazem Mohammed (Institute of High Energy Physics), Qiyu Sha	20m
3:25 PM → 3:40 PM	ML in physics analysis Speaker: Bo Liu (IHEP)	15m
3:40 PM → 3:55 PM	ML in ITK hardware related work Speaker: Zhan Li (IHEP)	15m
3:55 PM → 4:10 PM	ML in physics analysis Speaker: Jiarong Yuan (南开大学)	15m

Tutorial of particleNet Sep 12th

particleNet tutorial		
Monday Sep 12, 2022, 2:00 PM → 3:30 PM Asia/Shanghai		
Description https://mattermost.ihep.ac.cn/atlas/channels/machine-learning		
Zoom number: 5368708448		
2:00 PM → 3:00 PM	particleNet tutorial Speaker: Shudong Wang (高能所)	1h

Mattermost channel:

<https://mattermost.ihep.ac.cn/atlas/channels/machine-learning>

Some thoughts and plans (Need to be expanded by you)

- **ML with low statistics.**
 - VBF Higgs $\rightarrow \gamma\gamma$ analysis
- **Quantum ML** ([talk from Abdualazem/Qiyu](#))
 - Hardware vs Simulator
 - Develop effective algorithms
- **Implementation of latest ML methods to particle tagging** ([talk from Sudong](#))
- **Add more ideas at the Mattermost.**
 -
 -
- **Hardware related ML** ([talk from Zhan](#))
- **Computing resources** ([talk from Jingyan](#))

Plan for boson tagger

Shudong Wang

- **Get in touch with jet tagging conveners (done)**
 - Request for useful information (data samples, standard procedure, current situation, etc.)
- **Get familiar with related works in the past (on-going)**
 - boson taggers in the past used in both ATLAS & CMS
 - newly released ATLAS note about constituent-based top tagger
 - ...
- **Get started to work on it**
 - Understand physics behind the samples and data structure of them
 - Use ParticleNet or even more powerful & state-of-the-art techs (e.g. Particle Transformer) to explore the performance of these tools on boson tagging tasks
 - ...
- **Get involved in ATLAS ML community**
 - Participate the meetings, forums
 - ...
- **Get it used in $\gamma\gamma WW$ (hadronic decay) / $\gamma\gamma ML$ analyses**

ATLAS event display: candidate pair of Higgs bosons decay in ATLAS

Boosted $X \rightarrow bb$

Talk from Bo Liu

- Double bjet tagging in boosted regime
- Reject top and QCD events

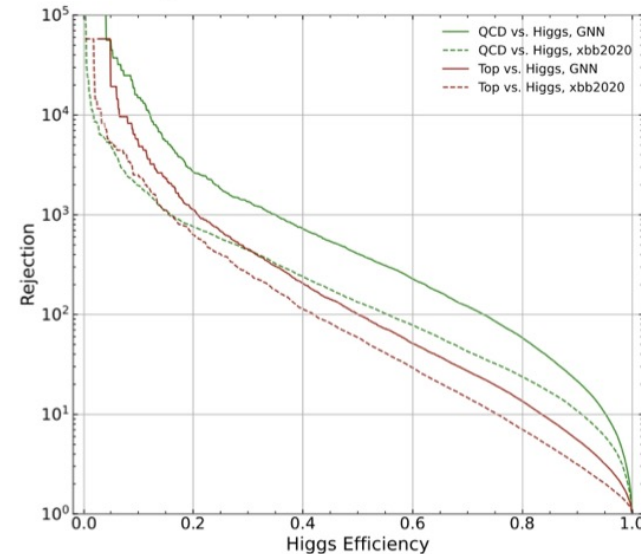

$$D_{Xbb} = \ln \frac{P_{\text{Higgs}}}{f_{\text{top}} \cdot p_{\text{top}} + (1 - f_{\text{top}}) \cdot p_{\text{multijet}}}$$

<https://indico.cern.ch/event/1132691/timetable/#b-457079-tagging-techniques>

For future: GNN

✓ An overall better performance

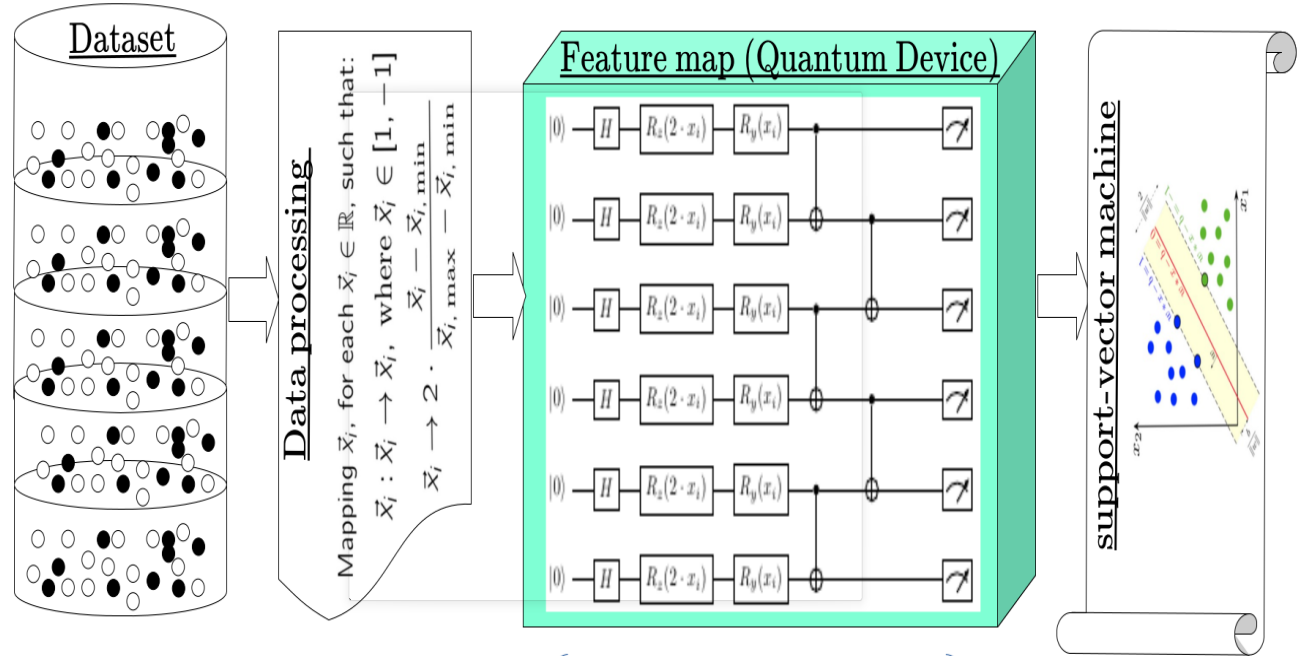

Quantum Machine Learning

Abdualazm Fadol
Qiyu Sha

IBM

QM hardware

Wuyuan

Quantum Kernel estimation

$$k(\vec{x}_i, \vec{x}_j) = \left| \langle \Phi(\vec{x}_i) | \Phi(\vec{x}_j) \rangle \right|^2$$

CEPC signatures

- ✓ Use CEPC $H \rightarrow \gamma\gamma$ as an example.
- ✓ QSVM is used as ML algorithm.
- ✓ Try both Simulator and Hardware (IBM/Wuyuan).

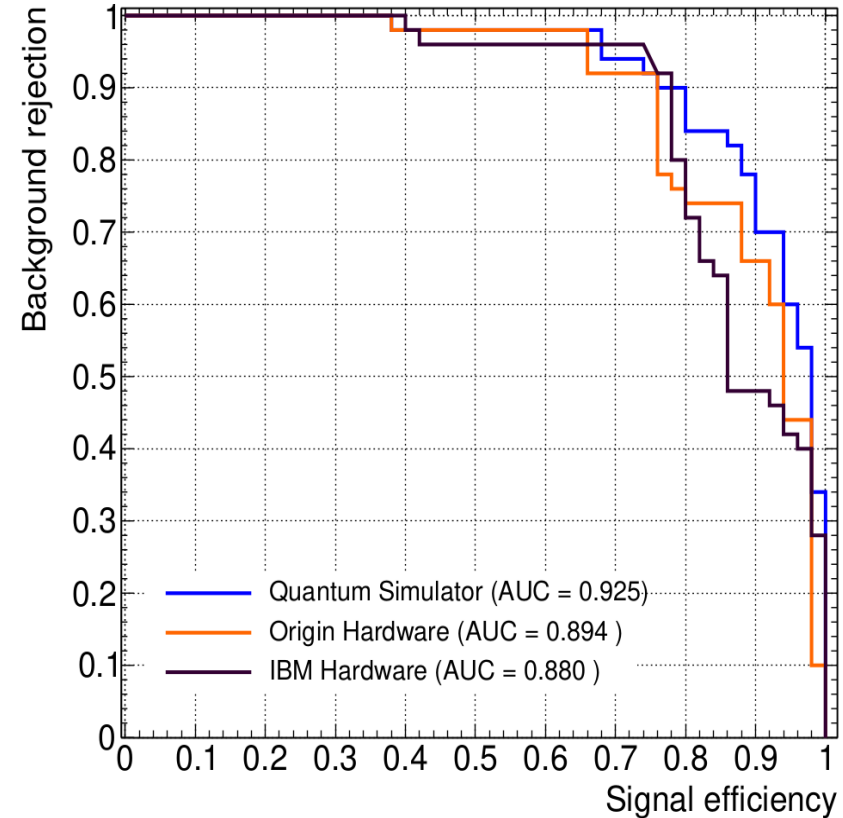

- Use Monte Carlo simulation for the signal and backgrounds:
 - Signal process $e^+e^- \rightarrow ZH \rightarrow \gamma\gamma q\bar{q}$
 - Backgrounds $e^+e^- \rightarrow (Z/\gamma^*)\gamma\gamma$
- The samples are generated with the CEPC configurations;
- at a centre-of-mass energy of 240 GeV with an integrated luminosity of 5.6 ab^{-1} .
- Up to 25k signal and background events are used.
- Six variables are used in both SVM and QSVM (6 qubits).

$$\vec{x}_i \rightarrow 2 \cdot \frac{\vec{x}_i - \vec{x}_{i, \min}}{\vec{x}_{i, \max} - \vec{x}_{i, \min}}$$

The results for simulator and quantum hardware

- Using 12000 events for training and testing datasets for the simulator (left).
- This is compared to the classical support-vector machines.
- And only 100 events are tested on Wuyuan and IBM hardware (right).

Identify Defects for ATLAS ITK Sensors with ML

Zhan Li

➤ So far, use microscope and scan over the sensor with eyes. Future, take a picture and inspect with ML algorithms.

➤ Different algorithms can be tried :

- ✓ LAD
- ✓ U-net
- ✓ Colour-Based Segmentation

➤ Check the difference between one point and its neighborhoods.

➤ Our IHEP ATLAS ITK team is going to have massive Production of the ITK chips and can use these mthodes

Future Activities and plans

- **A kickoff meeting at the Lab level in one week (done) .**
 - Tutorial on particleNet (done)
 - Tutorial on Quantum ML
- **Workshop : Half a year**
- **Monthly meeting**
 - have one before EPD ML Forum?
- **Invitation of experts to present ML talks.**
 - Both from industry and high energy physics community.
- **Active communication with ATLAS ML forum**
 - learn how to run the efforts efficiently.
 - Latest progresses and hot topics.
- **Short terms: Choose some topics, e.g. particleNet in ATLAS, QML etc..**
- **How to play leading roles: novel algorithms, new implementations...**
- **Manpower : so far 5-7 students and a couple of postdocs show interests, it has to be improved.**
- **Some Needs to be discussed.**
 - GPU resources and platform to do studies (See the [talk](#) from Jingyan)?
 - Fundings for machine usage?

backups

ATLAS Machine Learning Forum (AML)

Thanks to Fangyi Guo

- **This forum is jointly organized by Software and Computing (S&C) and Physics and Computing Coordinators for the goals of:**
 - Communications and liaisons inside/outside ATLAS:
 - **Organizing ML workshops every year and the bi-week meetings.**
 - **Topics in the bi-weekly meetings:** Reports from physics group liaisons; specific applications.
 - **Organizing tutorials for ATLAS users.**
 - **Liaising with other groups inside and outside ATLAS, facilitating collaboration with Machine Learners.**
 - **Forum for all ATLAS people: atlas-talk, twiki.**
 - **Supporting ML tools and techniques:**
 - Coordinating development of common ML tools.
 - Establishing standards where useful.
 - Providing advice on new ML tools and best tools for specific applications.

Machine Learning application (ATLAS)

- **Method and packages: encourage people to use non-HEP tools [\[twiki\]](#).**
 - Interexperimental Machine Learning [Pages](#) and [resource lists](#).
- **Do NOT recommend running trainings within analysis environment, but:**
 1. Produce a minimal "flat" dataset using the standard ATLAS workflow
 2. Run training in a stand-alone environment
 3. (Optionally) port trained algorithms back to Analysis/Reconstruction releases via [ONNXruntime](#). [\[tutorial\]](#)
- **Computing resources at CERN:**
 - Tools for flat dataset production: [HDF5Utils](#) for DAOD/AOD and uproot for [ntuples](#).
 - For distributed training: [intelligent Data Delivery Service](#).
 - Docker images: [ATLAS Machine Learning docker](#), [minimalist images](#).
 - GPU and notebook: [JupyterHub at CERN](#) and [GPU queues](#).

VH(cc)

ATLAS: [EPJC 82, 717 \(2022\)](#)
 CMS: [arXiv:2205.05550](#)

- Three lepton channels: $ZH \rightarrow vvcc$ (0-lep), $WH \rightarrow lvcc$ (1-lep), $ZH \rightarrow llcc$ (2-lep)

VH (full Run2)	ATLAS	CMS	
$H \rightarrow cc$ reconstruction	resolved	boosted	resolved
c-tagging	DL1, a deep neural network	ParticleNet, a graph neural network DGCNN	DeepJet
Categorization	2 p_T^V bins x (1-c-tag and 2-c-tag)	BDT x 3 cc-tagging regions	
Fitting discriminants	m_{Hcc}	m_{Hcc}	BDT

ATLAS uses a c-tagger that includes a b-tag veto on MV2c10@70% to establish **orthogonality with VH(bb)** and allows the **combination**

CMS ParticleNet tagger:
 ~5x better $H \rightarrow bb$ rejection
 ~5x better V +jet rejection
>2x improvement in the final sensitivity

Some thoughts (Need to be expanded by you)

- **ML with low statistics.**
 - Meet in VBF Higgs $\rightarrow \gamma\gamma$ analysis
- **Quantum ML**
 - Hardware vs Simulator
 - Develop effective algorithms
- **Please feel free to add more now or later at the Mattermost.**
 -
 -

ML Applications in physics (ATLAS)

- **Interesting topics about ML we can do:**

Many general topics are still remaining:

- Event generation and simulation: GAN ...
- Jet identification/quark-gluon tagging: CNN, GNN ...
- Modeling: Gaussian Processes, DNN...
- Event classification: all kinds of ML methods.

- **Fresh topics:**

- Unsupervised learning for new physics.
- Tools for ML: feature extraction, hyper-parameter optimization, robustness quantification, etc.
- Hardware-based ML.
- Quantum computing and quantum ML.
