## **Light Sterile Neutrinos at Neutrino Oscillation Experiments (remote)**

*Friday, July 7, 2023 2:00 PM (25 minutes)*

Neutrino oscillations as a phenomenon have been observed and measured over more than two decades, with datasets growing ever richer. As we enter a time of precision measurements, it is important to take stock of what new effects may be lurking in the data, waiting for us to discover them. In this talk, I will discuss such scenarios and how near-future experiments are well-suited for discovery.
