Recent results from Daya Bay

Friday, July 7, 2023 5:50 PM (25 minutes)

Utilizing powerful nuclear reactors as anti-neutrino sources, high mountains to provide ample shielding from cosmic rays in the vicinity, and functionally identical detectors with large target volume for near-far relative measurement, the Daya Bay Reactor Neutrino Experiment has achieved unprecedented precision in measuring the neutrino mixing angle θ_{13} and the neutrino mass squared difference $|\Delta m_{ee}^2|$. I will report the latest Daya Bay results on neutrino oscillations and the evolution of the reactor antineutrino flux and spectrum.
