The 29th International Workshop on Weak Interactions and Neutrinos

Contribution ID: 203

Type: Poster

## **Invariant Theory and Leptonic CP Violation**

Monday, 3 July 2023 15:30 (1 hour)

The invariant theory provides a systematic method to construct quantities that are invariant under group action in terms of model parameters. So far, it has a lot of applications in particle physics. In this talk, I will introduce the basic ingredients of invariant theory and Hilbert series. The application of invariant theory in neutrino physics, and particularly in describing leptonic CP violation, will be discussed.
