# Lattice QCD study of the hidden-charm pentaquark states

#### The 7th Symposium on "Symmetries and the emergence of structure in QCD Shandong, July 19-22,2023

#### Liuming Liu IMP, CAS

### P<sub>c</sub> Pentaquarks

## P<sub>c</sub> Pentaquarks

#### Lüscher's finite volume method:

#### Scattering on lattice

#### M. Lüscher, Nucl. Phys. B354, 531(1991)

Resonances/bound states are formally defined as poles in scattering amplitudes.

#### Scattering on lattice

# Finite volume spectrum: construct the matrix of correlation function:

 $C_{ij} = \langle 0 | \mathcal{O}_i \mathcal{O}_j^{\dagger} | 0$ 

- ◆ Solve the generalized eigenvalue problem(GEVP):  $C_{ii}v_i^n(t)$
- Eigenvalues:  $\lambda_n(t) \sim e^{-E_n t} (1 + e^{-\Delta E t})$

 $\Omega_n =$ 

## Scattering on lattice

 $\bullet$  build large basis of operators { $\mathcal{O}_1, \mathcal{O}_2, \cdots$ } with desired quantum numbers,

$$0 > = \sum_{n} Z_i^n Z_j^{n*} e^{-E_n t}$$

$$= \lambda_n(t) C_{ij}^0 v_j^n(t)$$

• Optimal linear combinations of the operators to overlap on the n'th state:

$$= \sum_{i} v_i^n \mathcal{O}_i$$

Lattice spacing	Volume( $L^3 \times T$ )	$M_{\pi}$ (MeV)

 $\Sigma_c \overline{D}$  and  $\Sigma_c \overline{D}^*$  scattering $(J^P = \frac{1}{2})$ :

 The finite-volume energies lie below the free energies, indicating rather strong attractive interactions.

Scattering amplitude:  

$$T \sim \frac{1}{p \cot \delta - ip}$$

Bound state pole:

$$p = i |p_B|$$

Effective range expansion:

$$pcot\delta(p) = \frac{1}{a_0} + \frac{1}{2}r_0p^2 + \cdots$$

$$\Sigma_c \bar{D} : P_c(4312)$$
  
 $a_0 = -2.0(3)(2)$   
 $E_B = 6(2)(2)$ 

Luscher's formula:

$$pcot\delta(p) = \frac{2Z_{00}(1;(\frac{pL}{2\pi})^2)}{L\sqrt{\pi}}$$

$$\Sigma_c \bar{D}^* : P_c(4440)$$
  
 $a_0 = -2.3(5)(E_B = 7(3)(1)M$ 

#### Results

#### Coupled channels: $\eta_c N, J/\psi N, \Lambda_c N$

 $\bigstar$  15 operators for the L = 32 ensemble:  $\mathcal{O}_{1,2,3} = N(\mathbf{p})\eta_c(-\mathbf{p}) \ (\mathbf{p}^2 = 0,1,2)$  $\mathcal{O}_{4.5} = N(\mathbf{p})J/\psi(-\mathbf{p}) \ (\mathbf{p}^2 = 0,1)$  $\mathcal{O}_{6,7,8} = \Lambda_c(\mathbf{p})\bar{D}(-\mathbf{p}) \ (\mathbf{p}^2 = 0,1,2)$  $\mathcal{O}_{9,10} = \Lambda_c(\mathbf{p})\bar{D}^*(-\mathbf{p}) \ (\mathbf{p}^2 = 0,1)$  $\mathcal{O}_{11,12,13} = \Sigma_c(\mathbf{p})\overline{D}(-\mathbf{p}) \ (\mathbf{p}^2 = 0,1,2)$  $\mathcal{O}_{14,15} = \Sigma_c(\mathbf{p})\bar{D}^*(-\mathbf{p}) \ (\mathbf{p}^2 = 0,1)$ 

$$\bar{D}, \Lambda_c \bar{D}^*, \Sigma_c \bar{D}, \Sigma_c \bar{D}^*$$

+23 operators for the L = 48 ensemble:  $\mathcal{O}_{1,2,3,4,5} = N(\mathbf{p})\eta_c(-\mathbf{p}) \ (\mathbf{p}^2 = 0,1,2,3,4)$  $\mathcal{O}_{7,8,9,10} = N(\mathbf{p})J/\psi(-\mathbf{p}) \ (\mathbf{p}^2 = 0,1,2,3)$  $\mathcal{O}_{10,11,12,13,14} = \Lambda_c(\mathbf{p})\overline{D}(-\mathbf{p}) \ (\mathbf{p}^2 = 0,1,2,3,4)$  $\mathcal{O}_{15,16,17,18} = \Lambda_c(\mathbf{p})\bar{D}^*(-\mathbf{p}) \ (\mathbf{p}^2 = 0,1,2,3)$  $\mathcal{O}_{19,20,21} = \Sigma_c(\mathbf{p})\overline{D}(-\mathbf{p}) \ (\mathbf{p}^2 = 0,1,2)$  $\mathcal{O}_{22,23} = \Sigma_c(\mathbf{p})\bar{D}^*(-\mathbf{p}) \ (\mathbf{p}^2 = 0,1)$ 

#### $N - \eta_c(J/\psi)$ spectrum:

mass dependence will also be explored.

#### • Single channel analysis indicates bound states in $\Sigma_c \overline{D}$ and $\Sigma_c \overline{D}^*$ channel at $m_{\pi} \sim 300$ MeV. Coupled channel analysis is onging. Pion
