miDose Solutions Product Overview & Discussion

Tuesday, 22 October 2024 15:50 (20 minutes)

miDose Solutions is a growing Polish company established in 2018 following the development and patenting of innovative solutions at the Silesian University of Technology.

The Company was founded to provide a novel dose rate measurement systems, the μ DOSE system, and answer the needs and specific requirements of the trapped charge dating (TCD) community. After years of gained experience, we developed the enhanced μ DOSE+ system, as well as the just-released fully automated ^{14}C combustion and graphitization system, μ Graphiline, to further facilitate researchers and the dating community.

We proudly provide reliable equipment for accurate measurements, as we aim to advance the state of knowledge in environmental, earth and archeological sciences as a whole, and our μ DOSE and μ DOSE+ systems are currently used in laboratories worldwide, including Europe, Asia, Australia and the USA.
