## Three-body bound state of $DD^*\bar{K}$ system in lattice effective field theory

Tuesday, 24 September 2024 15:50 (20 minutes)

Currently, the  $DD^*$ ,  $D\bar{K}$  and  $D^*\bar{K}$  systems are studied from both theoretical and experimental sides. The three hadronic molecules  $T_{cc}^+$ ,  $D_{s0}^*(2317)$  and  $D_{s1}(2460)$  are found in the above three two-body systems. We consider chiral effective field theory, get the interactions of  $DD^*$ ,  $D\bar{K}$ ,  $D^*\bar{K}$  systems on lattice, find a model-independent three-body bound state in  $DD^*\bar{K}$  system.
