

Requests for CGEM Installation

Giulio Mezzadri on behalf of the working group

2024/09/16 - BESIII upgrade meeting

Additional Laser Measurements before Insertion

To check alignment of these holes between the two sides

Support during the Installation

- Request for on-site support from IHEP's mechanical workshop for part production and adjustment for the duration of the installation
 - Priority or even walk-in access would be ideal
 - Help in passing requests/technical details
- Request for support in urgent purchases of tools and materials
 - Help in finding technical articles and translating product information
 - Help in dealing with customer support when necessary
 - Help in performing purchases and obtaining reimbursement for minor expenses

Some More Questions

- Who is going to install the EAST flange after inserting the CGEM-IT?
- Is the EAST flange solely held by screws or is it glued as well?
- Who is going to position the central section of the beam pipe?

All these operations require operating very close to the detector, can you provide procedures to evaluate risks to the detector?
