64. Scalar Mesons below 1 GeV

Revised August 2023 by T. Gutsche (Tübingen U.), C. Hanhart (FZ Jülich), R.E. Mitchell (Indiana U.) and S. Spanier (Tennessee U.).

$$\sqrt{s_{\text{Pole}}}^{a_0(980)} = (970 - 1020) - i(30 - 70) \text{ MeV}$$

Conventional scalar $q\bar{q}$ states:

S. Godfrey and N. Isgur, Phys. Rev. D 32, 189-231 (1985).

D. Morgan and M. R. Pennington, Phys. Rev. D 48, 1185-1204 (1993).

N. A. Tornqvist and M. Roos, Phys. Rev. Lett. 76, 1575-1578 (1996).

Tetraquarks, composed of four quarks $qq\bar{q}\bar{q}$ states:

R. L. Jaffe, Phys. Rev. D 15, 267 (1977).

J. D. Weinstein and N. Isgur, Phys. Rev. Lett. 48, 659 (1982).

N. N. Achasov, Nucl. Phys. A 728, 425-438 (2003).

Molecular state, composed of $K\bar{K}$:

B. S. Zou and D. V. Bugg, Phys. Rev. D 50, 591-594 (1994).

G. Janssen, B. C. Pearce, K. Holinde and J. Speth, Phys. Rev. D 52, 2690-2700 (1995).

J. A. Oller and E. Oset, Nucl. Phys. A 620, 438-456 (1997) [erratum: Nucl. Phys. A 652, 407-409 (1999)].

M. P. Locher, V. E. Markushin and H. Q. Zheng, Eur. Phys. J. C 4, 317-326 (1998).

J. A. Oller, E. Oset and J. R. Pelaez, Phys. Rev. Lett. 80, 3452-3455 (1998).

$$D^0 \rightarrow K^+ K^- \eta, \quad \pi^+ \pi^- \eta$$

$$D^0 \rightarrow \pi^+ \pi^- \eta, \quad D^+ \rightarrow \pi^+ \pi^0 \eta$$

M. Ablikim et al. [BESIII], Phys. Rev. D 110, L111102 (2024)

What can we learn from the invariant mass distributions of the experimental measurement?

§2. Formalism

(1) Coupled channel interaction from the chiral unitary approach

- **Chiral Unitary Approach**: solving Bethe-Salpeter equations, which take on-shell approximation for the loops.

$$T = V + V G T, \quad T = [1 - V G]^{-1} V$$

D. L. Yao, L. Y. Dai, H. Q. Zheng
and Z. Y. Zhou, Rept. Prog. Phys.
84, 076201 (2021)

where **V** matrix (potentials) can be evaluated from the interaction Lagrangians.

$I = 0$ sector

$$\pi^+ \pi^-, \pi^0 \pi^0, K^+ K^-, K^0 \bar{K}^0, \eta \eta$$

$I = 1$ sector

$$K^+ K^-, K^0 \bar{K}^0, \pi^0 \eta$$

$I = 1/2$ sector

$$K^+ \pi^-, K^0 \pi^0, K^0 \eta$$

J. A. Oller and E. Oset, Nucl. Phys. A
620 (1997) 438

E. Oset and A. Ramos, Nucl. Phys. A
635 (1998) 99

J. A. Oller and U. G. Meißner, Phys.
Lett. B 500 (2001) 263

G is a diagonal matrix with the loop functions of each channels:

$$G_{ll}(s) = i \int \frac{d^4 q}{(2\pi)^4} \frac{1}{(P-q)^2 - m_{l1}^2 + i\varepsilon} \frac{1}{q^2 - m_{l2}^2 + i\varepsilon}$$

The coupled channel scattering amplitudes **T matrix satisfy the unitary** :

$$\text{Im } T_{ij} = T_{in} \sigma_{nn} T_{nj}^*$$

$$\sigma_{nn} \equiv \text{Im } G_{nn} = - \frac{q_{cm}}{8\pi\sqrt{s}} \theta(s - (m_1 + m_2)^2)$$

To search the poles of the resonances, we should extrapolate the scattering amplitudes to the second Riemann sheets:

$$G_{ll}^{II}(s) = G_{ll}^I(s) + i \frac{q_{cm}}{4\pi\sqrt{s}}$$

(2) Final state interaction

$$T = [1 - VG]^{-1} V$$

S-wave

The final state interaction at the hadron level

The weak decay process at the quark level

$$\begin{aligned}
 H^{(1a)} &= V_P V_{cd} V_{ud} \{ (u\bar{d} \rightarrow \pi^+) [\underline{d\bar{u} \rightarrow d\bar{u} (u\bar{u} + d\bar{d} + s\bar{s})}] \\
 &\quad + (d\bar{u} \rightarrow \pi^-) [\underline{u\bar{d} \rightarrow u\bar{d} (u\bar{u} + d\bar{d} + s\bar{s})}] \} \\
 &= V_P V_{cd} V_{ud} \{ (u\bar{d} \rightarrow \pi^+) [M_{21} \rightarrow (M \cdot M)_{21}] \\
 &\quad + (d\bar{u} \rightarrow \pi^-) [(M \cdot M)_{12}] \},
 \end{aligned}$$

$$\begin{aligned}
 H^{(2a)} &= \beta V_P V_{cd} V_{ud} \left[\left(d\bar{d} \rightarrow -\frac{1}{\sqrt{2}} \pi^0 \right) [\underline{u\bar{u} \rightarrow u\bar{u} (u\bar{u} + d\bar{d} + s\bar{s})}] \right. \\
 &\quad + \left(d\bar{d} \rightarrow \frac{1}{\sqrt{6}} \eta \right) [\underline{u\bar{u} \rightarrow u\bar{u} (u\bar{u} + d\bar{d} + s\bar{s})}] \\
 &\quad + \left(u\bar{u} \rightarrow \frac{1}{\sqrt{2}} \pi^0 \right) [\underline{d\bar{d} \rightarrow d\bar{d} (u\bar{u} + d\bar{d} + s\bar{s})}] \\
 &\quad \left. + \left(u\bar{u} \rightarrow \frac{1}{\sqrt{6}} \eta \right) [\underline{d\bar{d} \rightarrow d\bar{d} (u\bar{u} + d\bar{d} + s\bar{s})}] \right] \\
 &= \beta V_P V_{cd} V_{ud} \left[\left(d\bar{d} \rightarrow -\frac{1}{\sqrt{2}} \pi^0 \right) [M_{11} \rightarrow (M \cdot M)_{11}] \right. \\

§4. Summary

- We use the chiral unitary approach to dynamically generate the state $a_0(980)$
- Taking the data from Belle, we fit the invariant mass distributions of the decays $D^0 \rightarrow K^+ K^- \eta, \pi^+ \pi^- \eta$
- Taking the data from BESIII, we fit the invariant mass distributions of the decays $D^0 \rightarrow \pi^+ \pi^- \eta, D^+ \rightarrow \pi^+ \pi^0 \eta$
- Indicating the molecular nature of the $a_0(980)$

Thanks for your attention!
