IHEP

zhangkl@ihep.ac.cn

- New Release ready today(?)
- Ecal 10mm - 15mm
- Expect N_PFO 100% reduce, to ~120% of truth.
 - Most Hcal single hit are merged.
- New samples to check.
- MCParticle Pointer issue solved;
 - Sim hit information will not be kept after digi to reduce size.

Bump for E=70GeV -0.2

DeltaE of jet at 70~80GeV

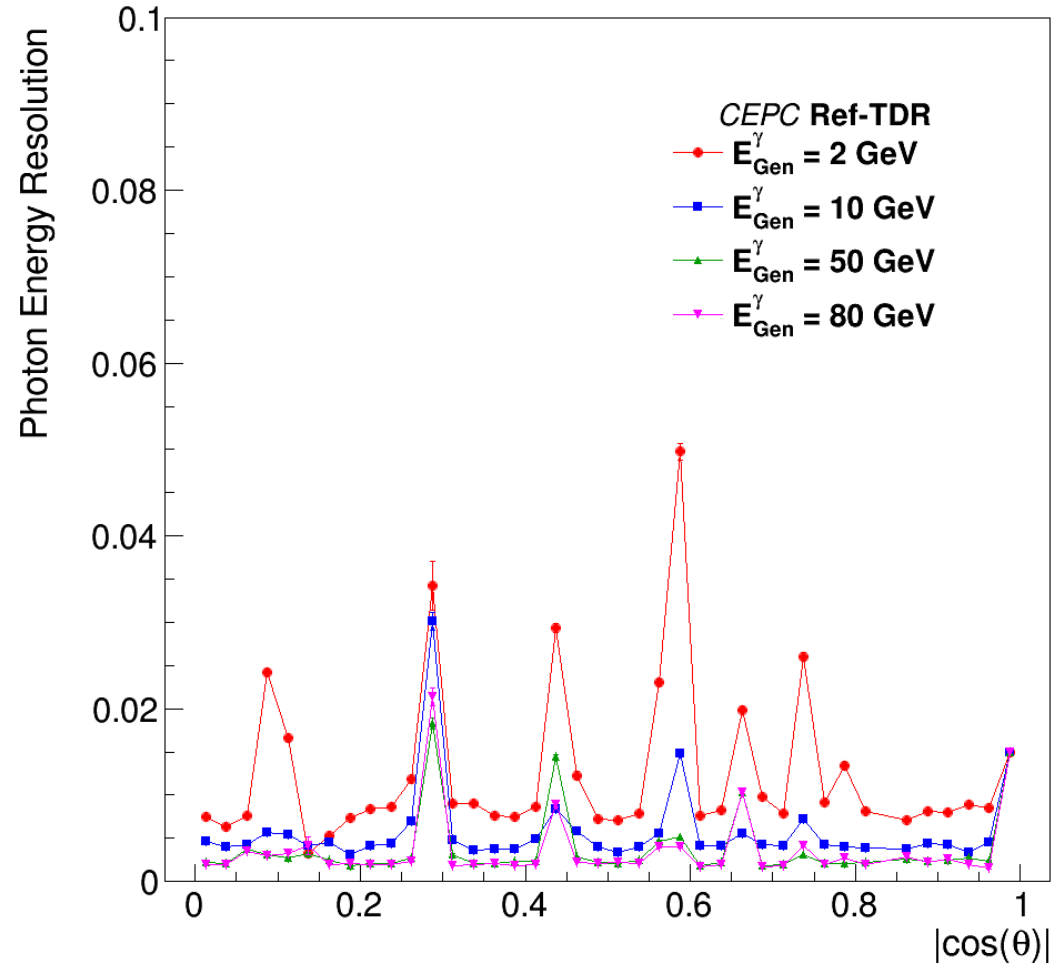

ZZ->vvqq results consistent with ZH->vvqq.

Diphoton

@Reda

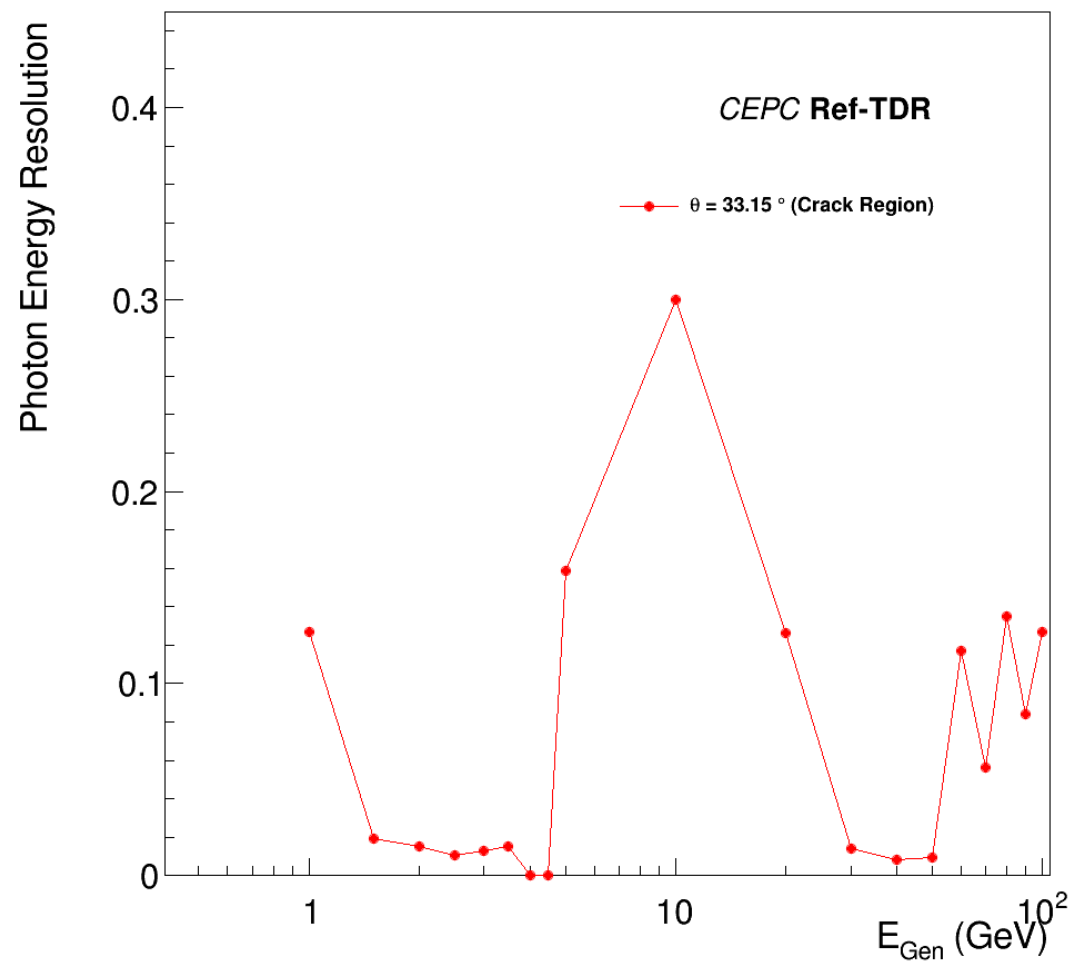

Costheta ~ 0.83 Barrel/Endcap crack region showing strange behavior. Not shown in plot.

Crack region

Occasionally in crack region no single peak can be constructed.
 Despite crack region, photon reco eff is 100% when $E > 2$ GeV.

For TDR Charged only ParT training, Yongfeng and Zuofei gives 2 independent result with different framework.
Best Metric: 0.5245.

TDR/CDR Charged/Neutral

CDR All: 0.52836

CDR Charged:0.50146

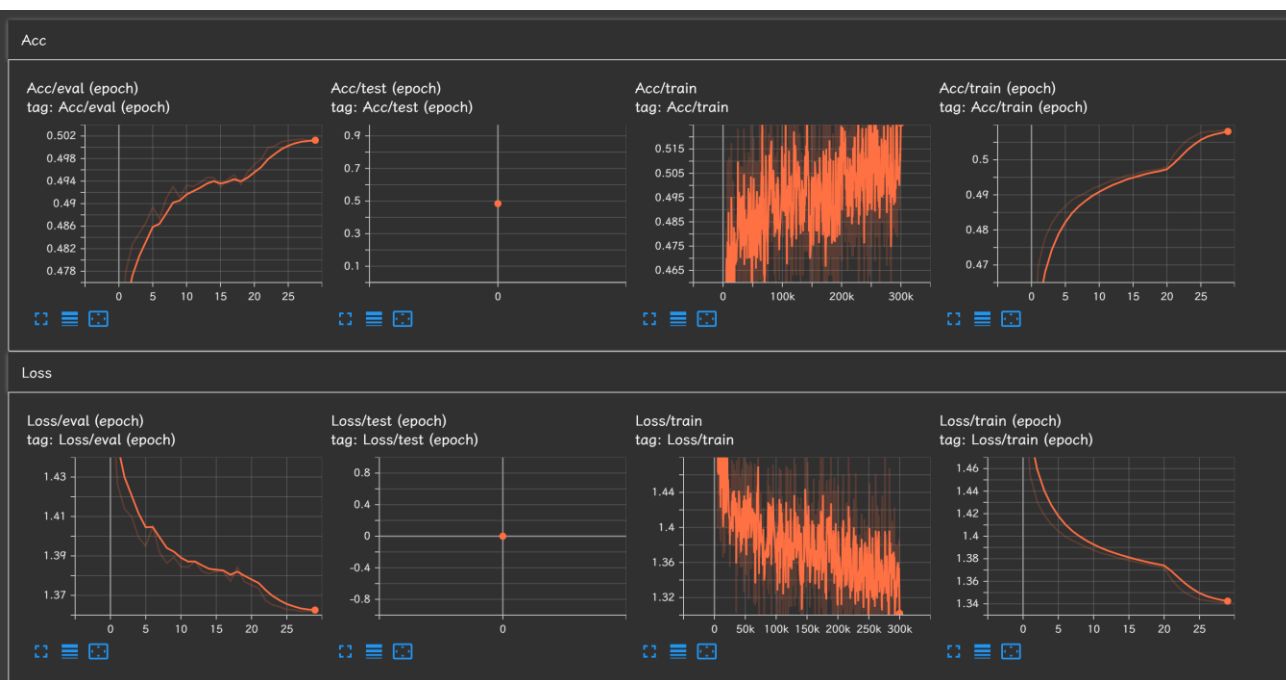

TDR Charged:0.52457

- Charged only results, TDR better a bit but worse than CDR all particles.
- Reason under check.
- New samples can even better.

Training Hyper parameters

Using config from Zuofei/Yongfeng, no overtraining.

Run ↑	Value	Step	Relative
Metric_loss_train	1.4209	59	9.303 hr
Metric_loss_val	1.3832	59	9.303 hr

Loss vs epochs
Train and validation

Run ↑	Value	Step	Relative
Metric_acc_train	0.4839	59	9.303 hr
Metric_acc_val	0.4969	59	9.303 hr

Acc vs epochs
Train and validation

Roc Curve

Basically, current TDR JOI are ready for TDR document.
For application, tomorrow, we have one JOI jumping start tutorial.

Event size

```
zhangkl@lxlogin003 zhangkl/test » ll -rt *.root
-rw-r--r-- 1 zhangkl atlas 53M Feb 28 13:49 sim_E91.2_eebb_00002.root

```

```
Out_ana.filename = "/cefs/higgs/zhangkl/test/rec_E91.2_eebb_00002.root"
Out_ana.outputCommands = [
  "drop *",
  "keep MCParticle",
  "keep CyberPFO",
  "keep CyberPFOPID",
  "keep CompleteTracks"
]
```

- This size for 5 events.
- Sim: 10.6MB per event.
 - (For E240, SimHits~15MB.)
- Drop SimHits: dig: 600k per event
- +tracking: 1.1M per event
- +reco: 1.2M per event
- (ana.root has all info of dig.root and trk.root, which can be deleted.)
- For analysis purpose only:
 - 50k per event.
- Plan to use 1MB per event to estimate the event size.

TDR/CDR D0/Z0 check
