

Status at Feb 26

- Yesterday night ZHAO Jingzhou suggested to implement a filter of the FANOUT to guarantee that both CHECK and L1 signal are long at least 8 clock cycles
 - This is to limit the effect of the initial glitches
 - GEMROCs have already a filter to guarantee that the L1 has to be longer than 8 clock cycles
 - Q: what's the status of the MTI board now? We saw lot of work
- Angelo is working on the firmware modification necessary to implement it
 - First test done in the afternoon showed need of improvements that are being implemented now
- GEFI server in preparation:
 - Alberto set up the OS (UbuntuServer) and prepared the disks
 - From this morning the server is online thanks to the help of Tingxuan
