

LHX liquid cooling solutions and multiple industry application scenarios

Monday, 15 September 2025 09:15 (30 minutes)

LHX is the cooling solution called **Liquid-to-Air Heat Exchanger**. LHX offers customers a differentiate cooling solution for electronic cabinets, enabling effective heat dissipation for high-performance electronic equipment. Whether deploying new equipment or upgrading existing equipment, it can quickly achieve high computing density and high-precision/high-speed measurement in a limited space. This article will introduce the basic concepts and system architecture of LHX and its application scenarios in multiple industries.
