

Status update

Beam-background for tracking

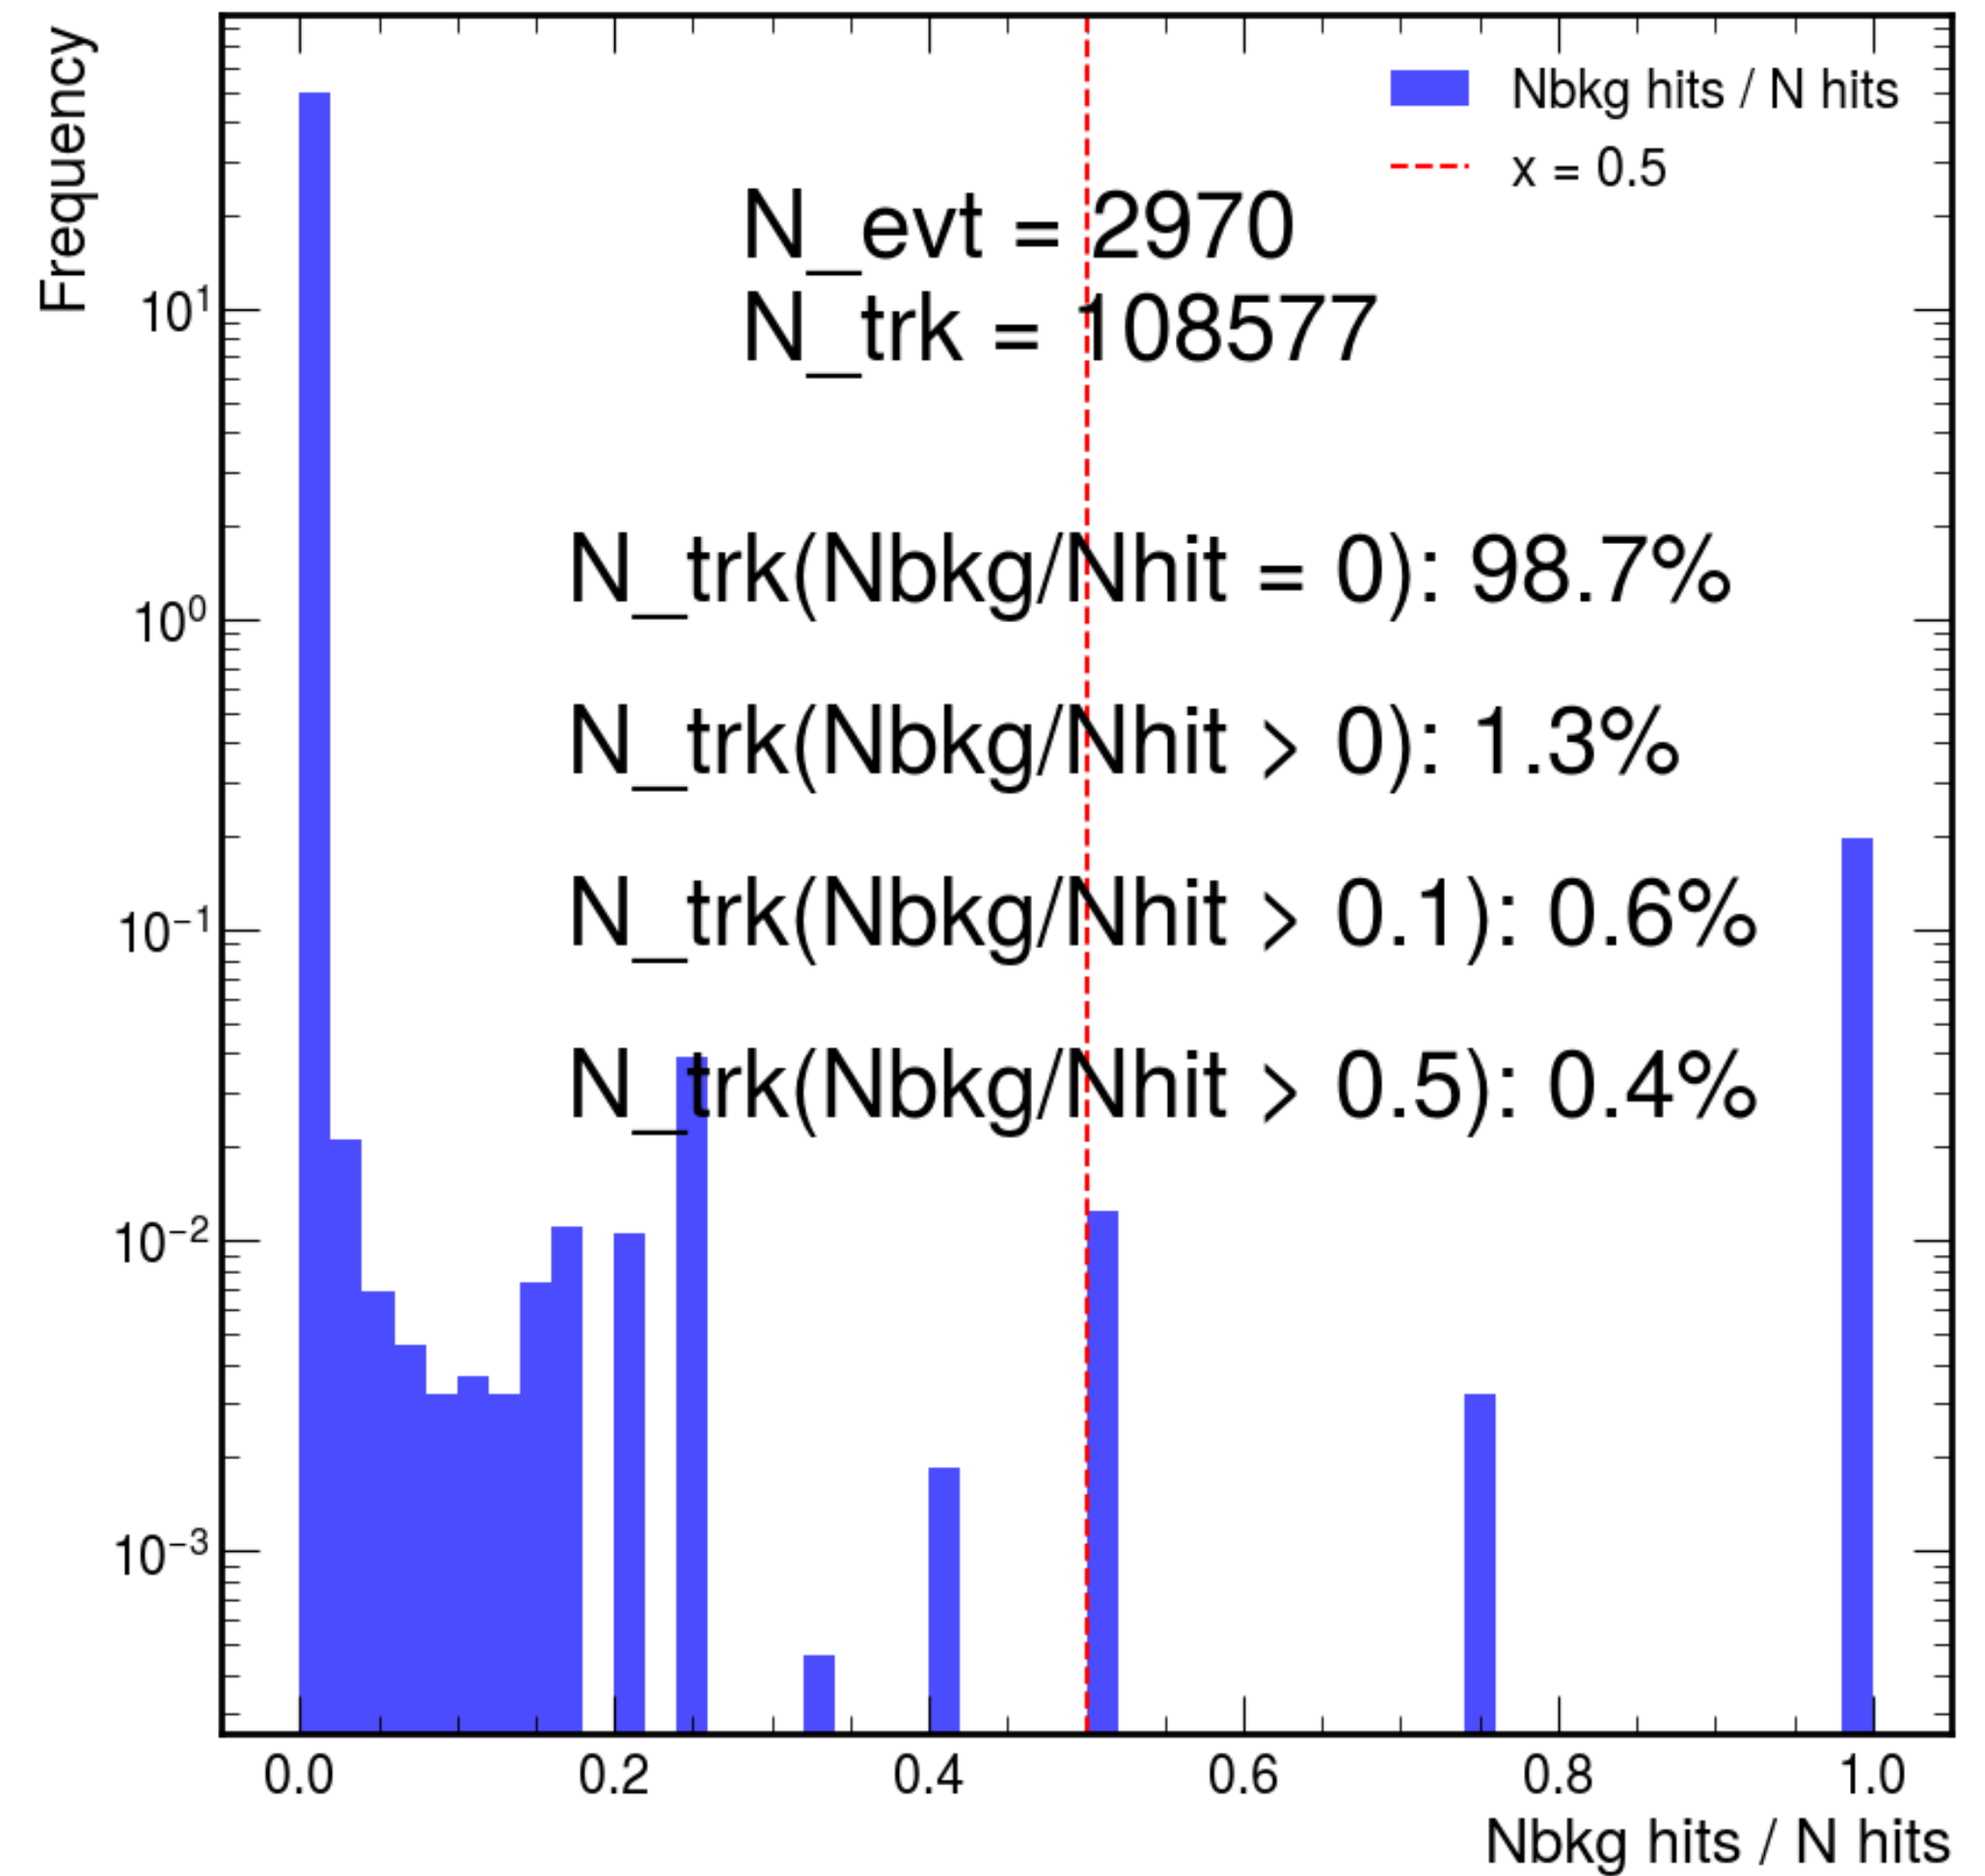

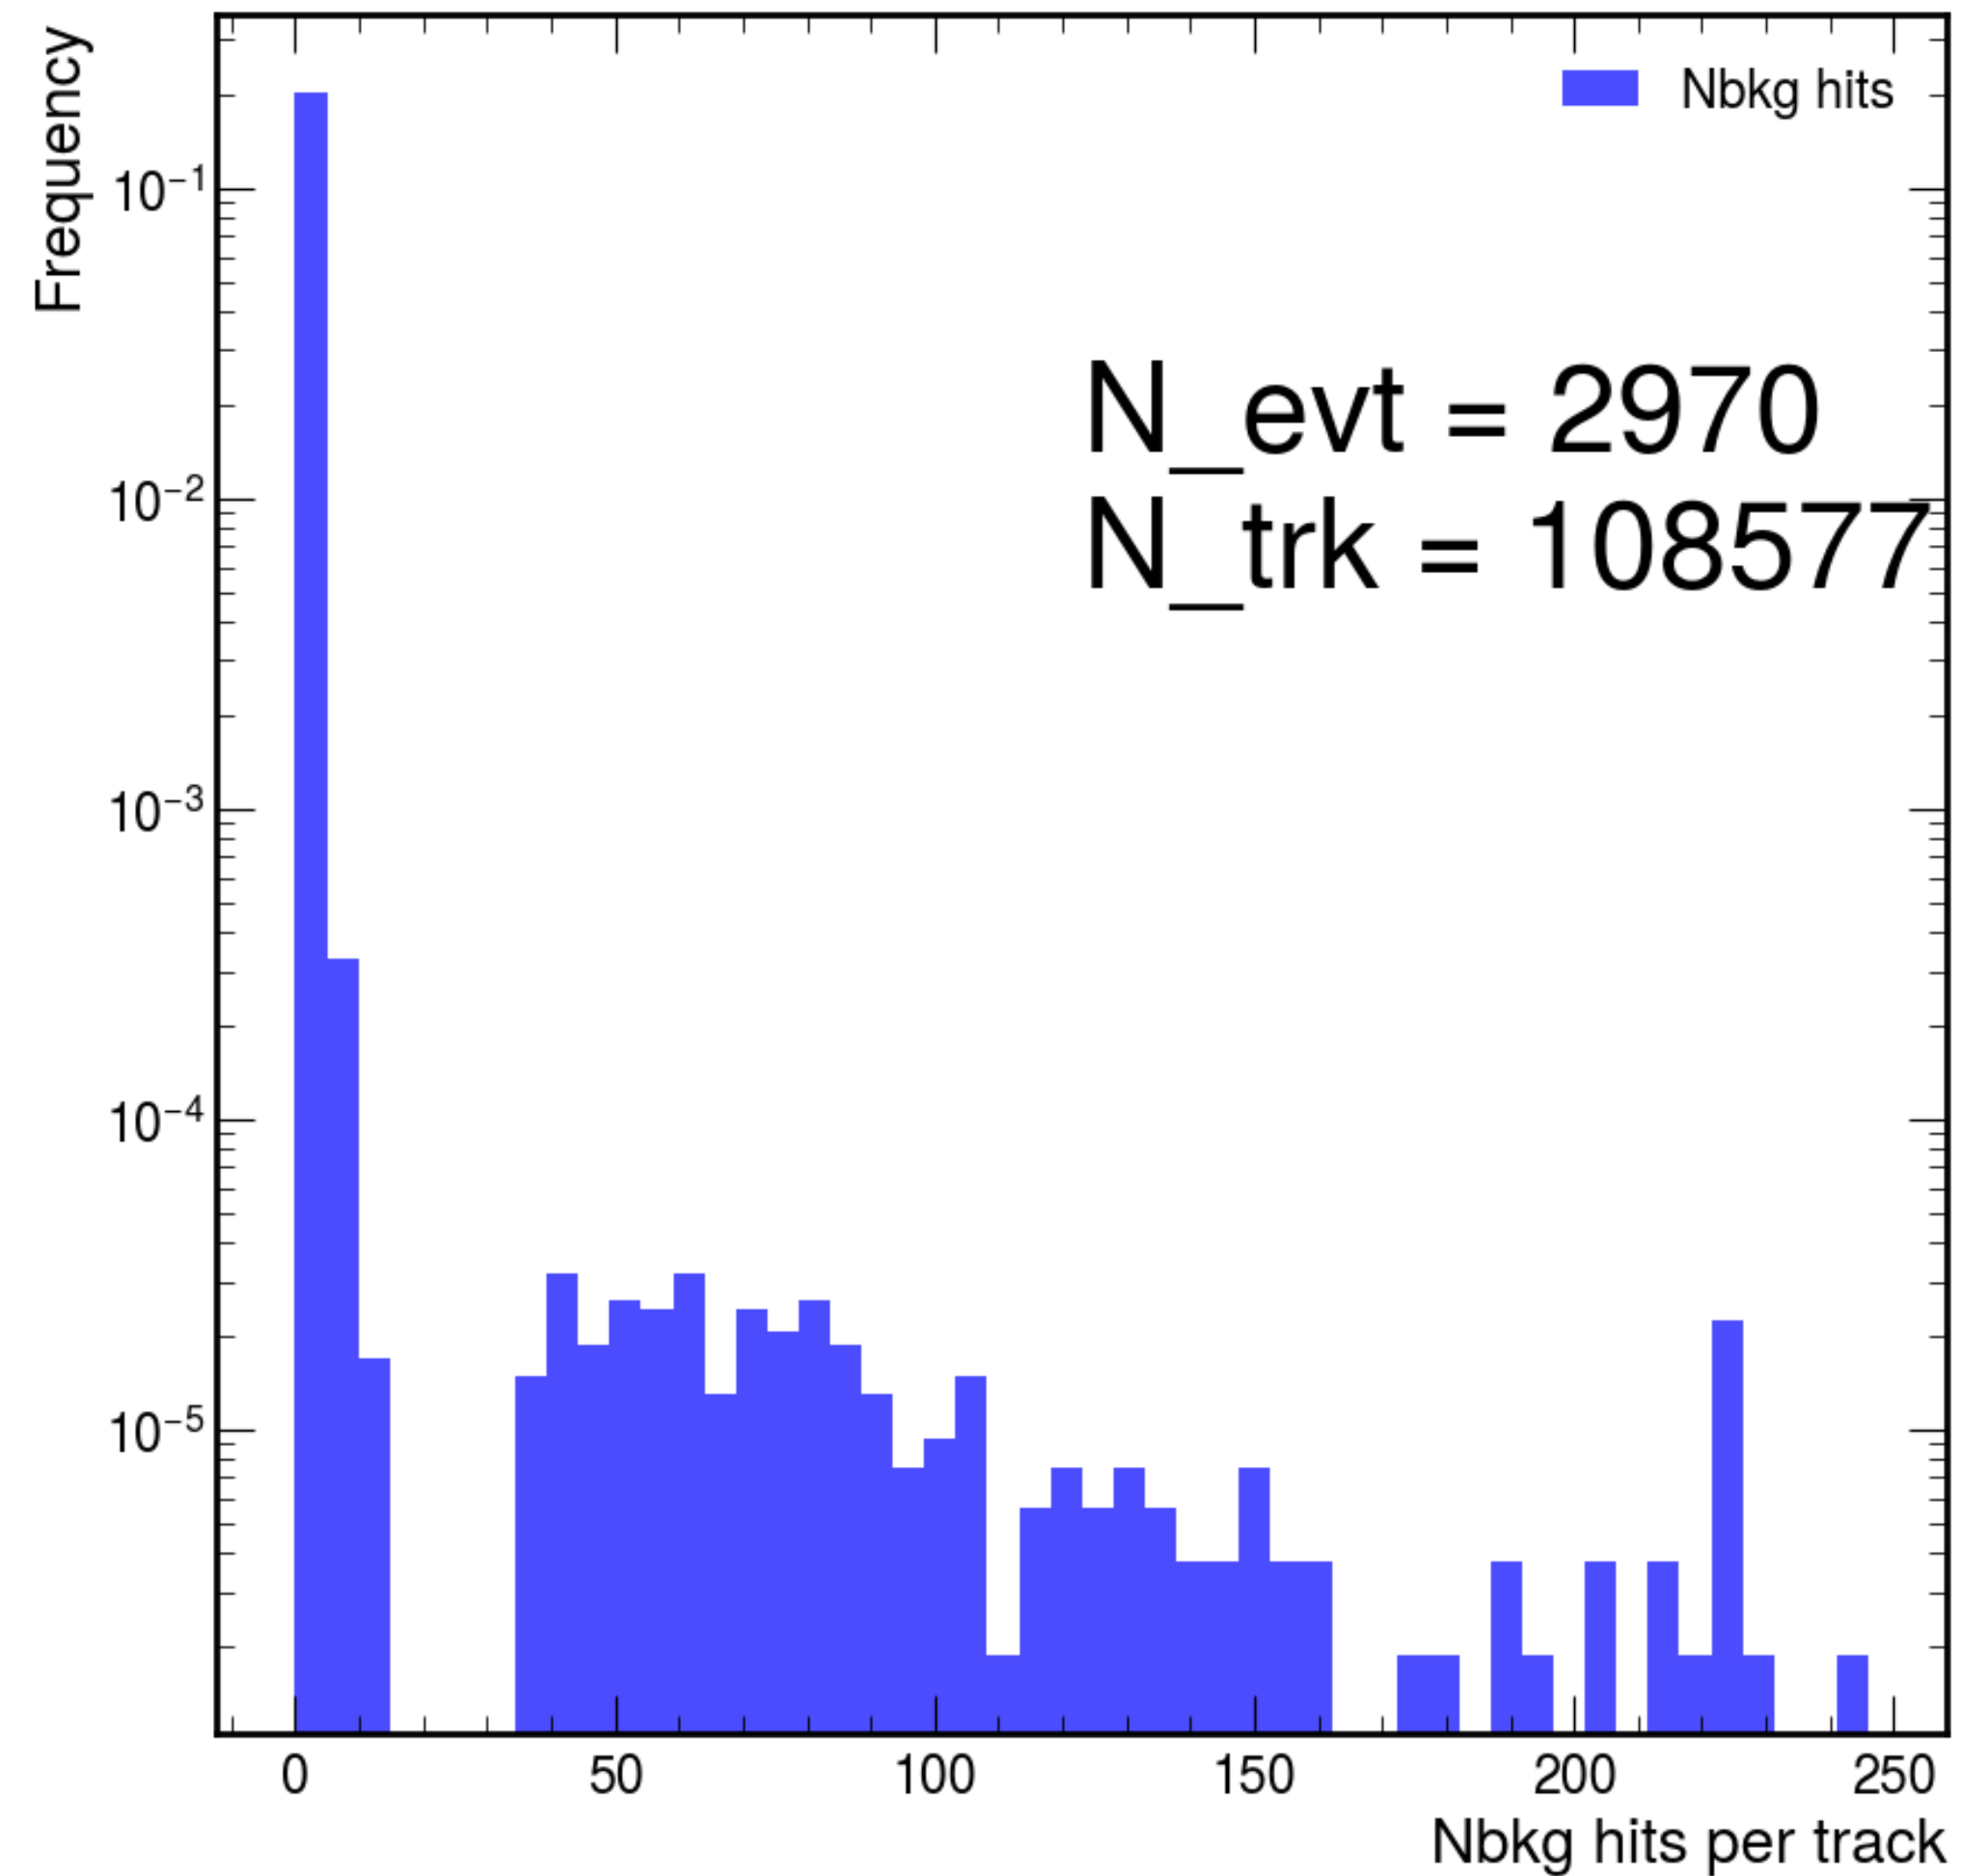

Chenguang Zhang / 16May2025

Overview

- The impact of beam-background at track-level is negligible
 - Background contaminates signal tracks with single hit
 - Tiny effects on signal track efficiency/purity
- Move to the event-level
 - Pure background track in signal events

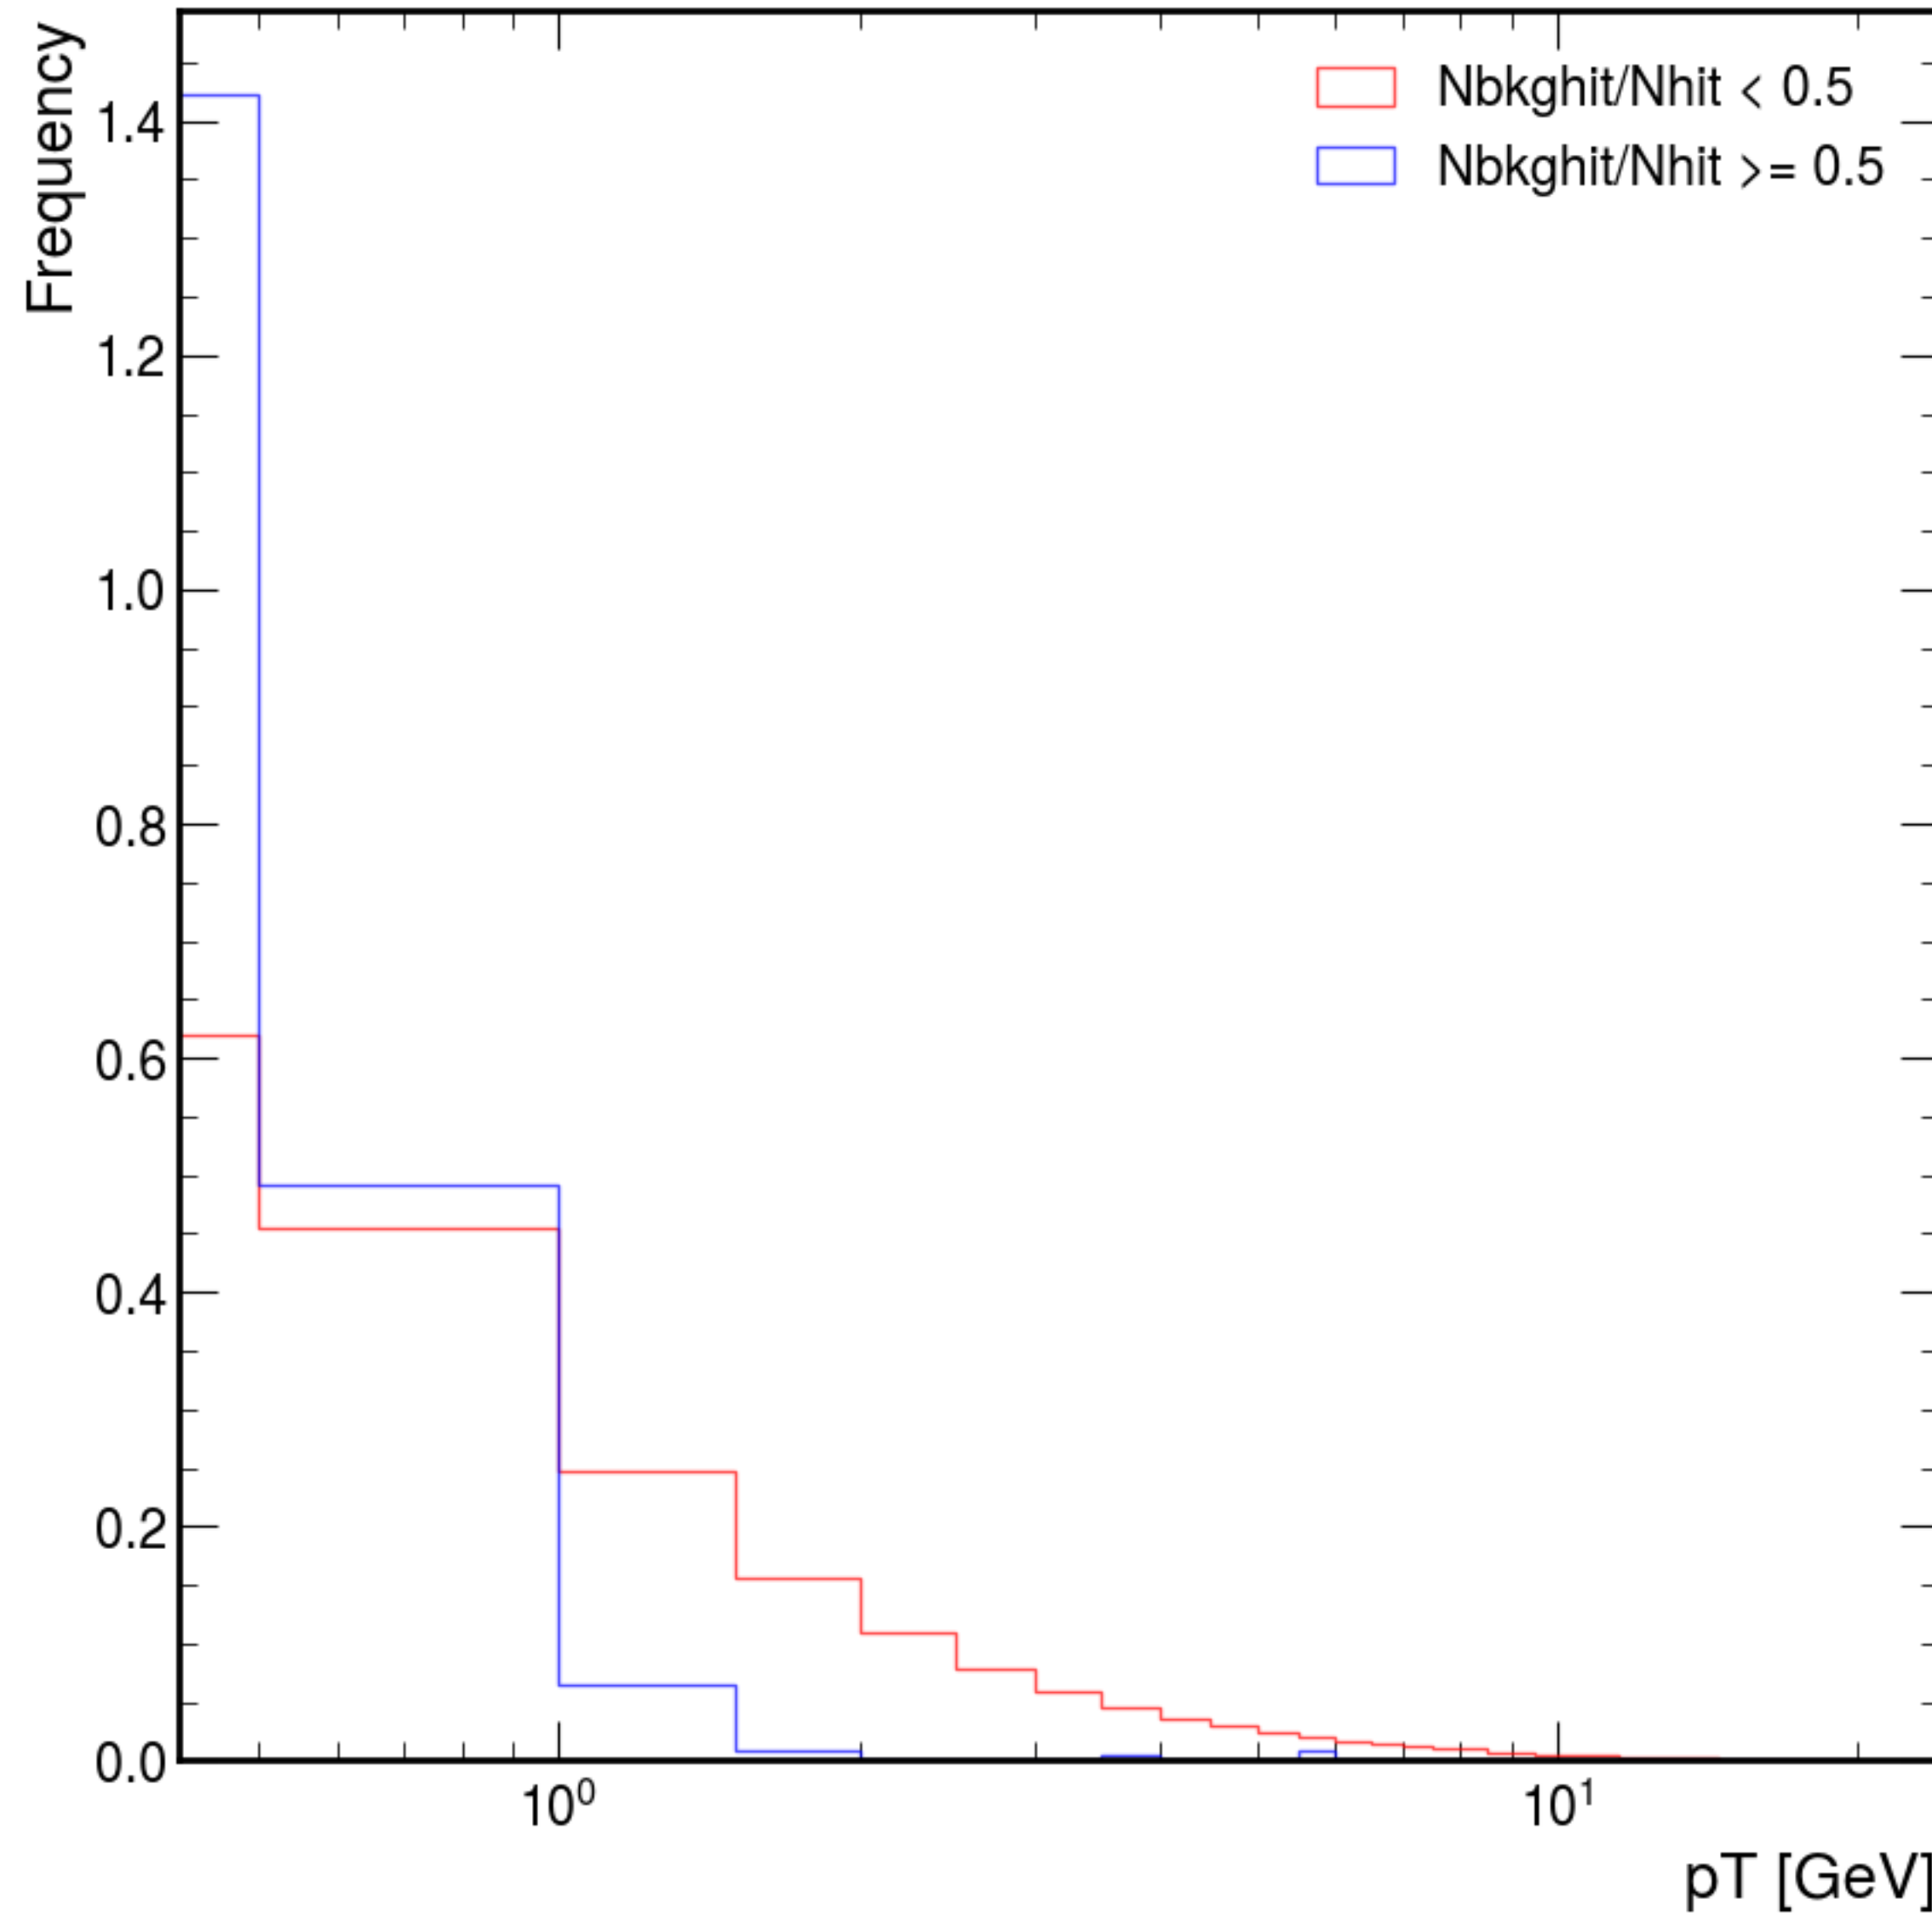

Baseline mixing configuration used

nnHgg + BKG

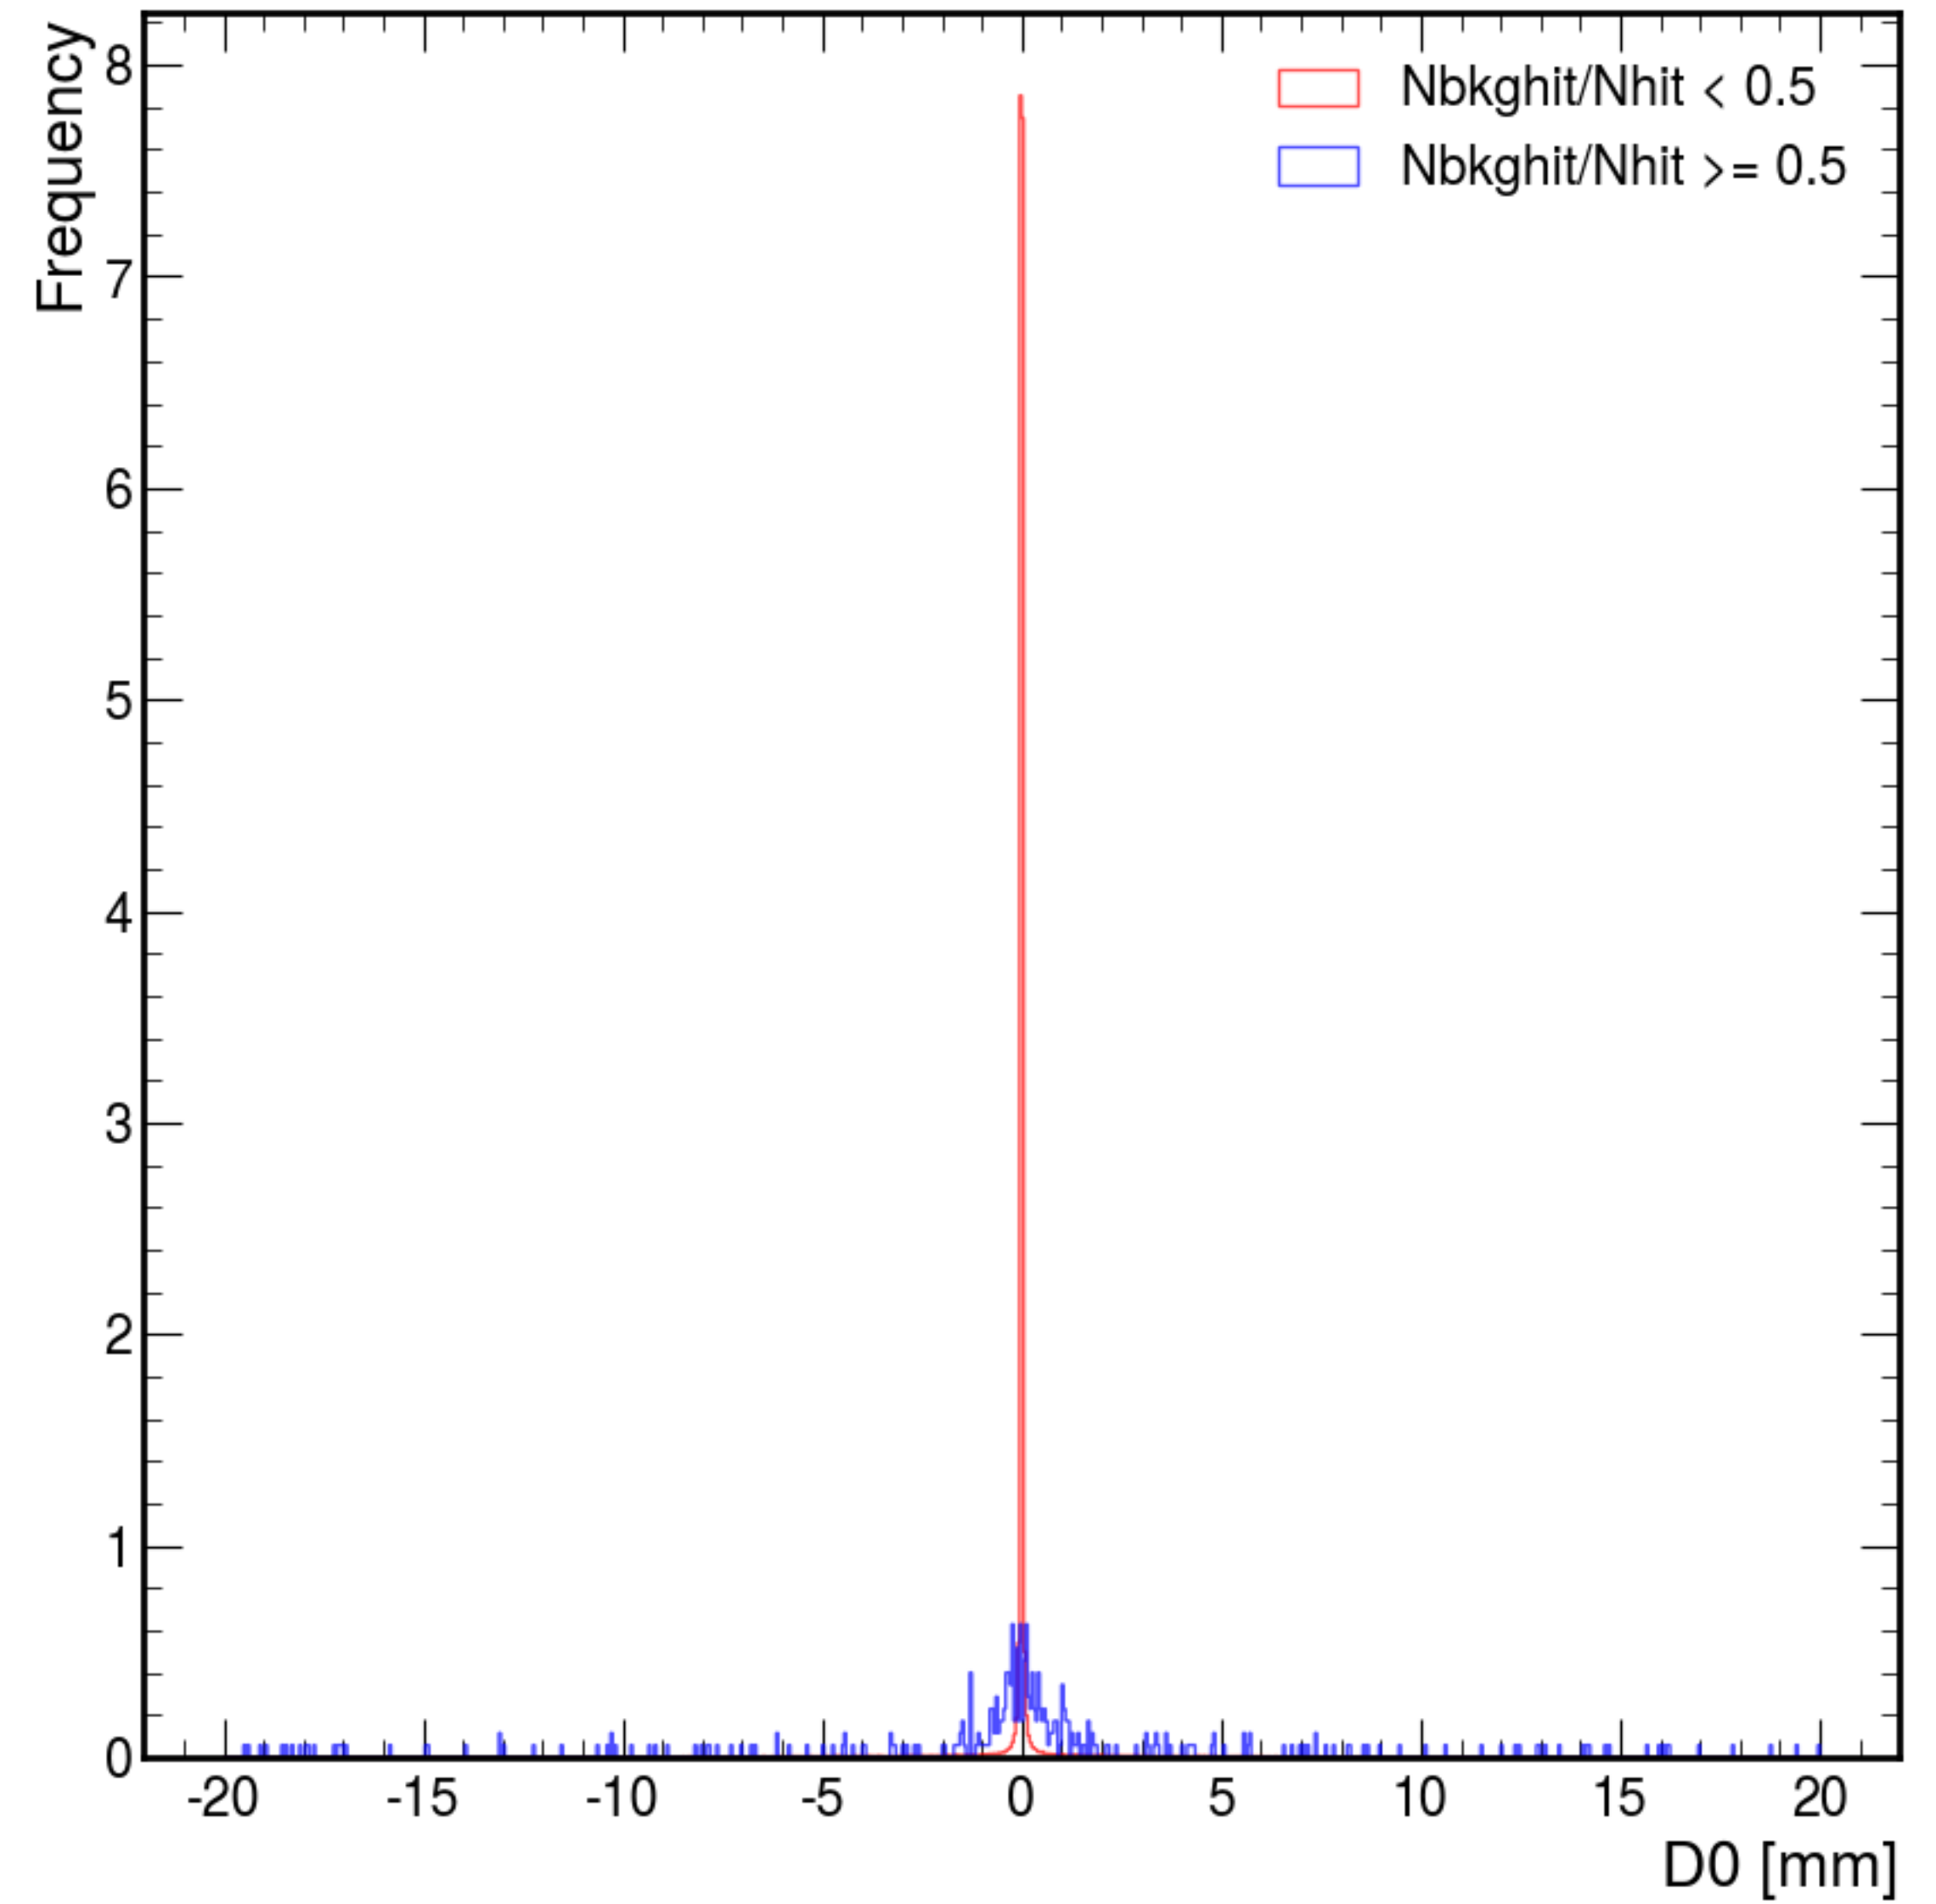

- $1\% \times 108577 / 2970 \sim 0.3$
- On average, there is one background track for every 3 events
