# AZh combination

- Asked for the second circulation
- electronic sign-off: all EB members
- many many thanks to all EB members and analyzers

# AZh - introduction

- Search for a **CP-odd Higgs boson** decaying to **Zh**

model independent

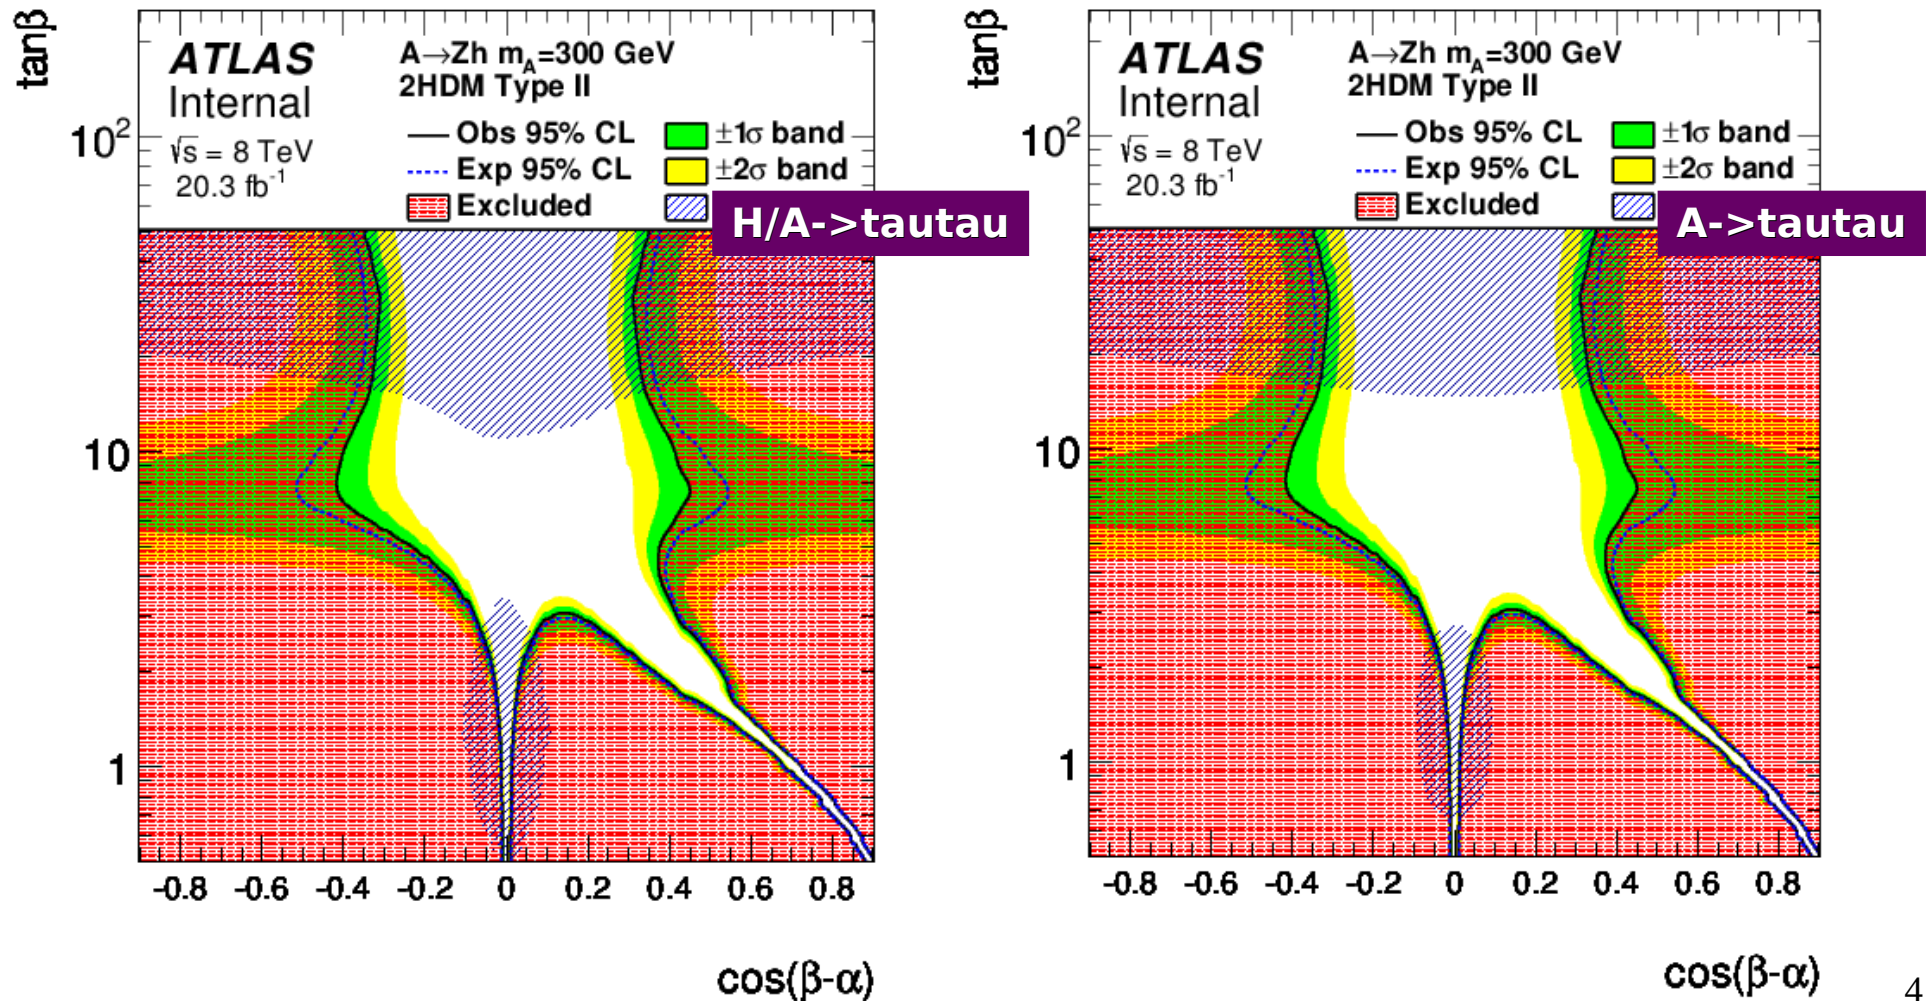

- To properly interpret our AZh results in 2HDM, one has to consider the following issues

model dependent

- $\text{BR}(h \rightarrow \text{tautau})$  and  $\text{BR}(h \rightarrow b\bar{b})$ , rescale in the same way in type I and II, but differently in type III and IV
- Natural width, since we assume resonance width is narrow
- $b\bar{b}A$  production, especially at high  $\tan\beta$  in type II and IV
- Type III and IV are newly added
- $A \rightarrow \text{tautau}$  interpretation in 2HDM is overlaid
- New transparent styles

# H/A -> tau tau effects

- Proposed by Marumi, the overlaid A->tautau exclusions are asked to be compared with H/A->tautau exclusions

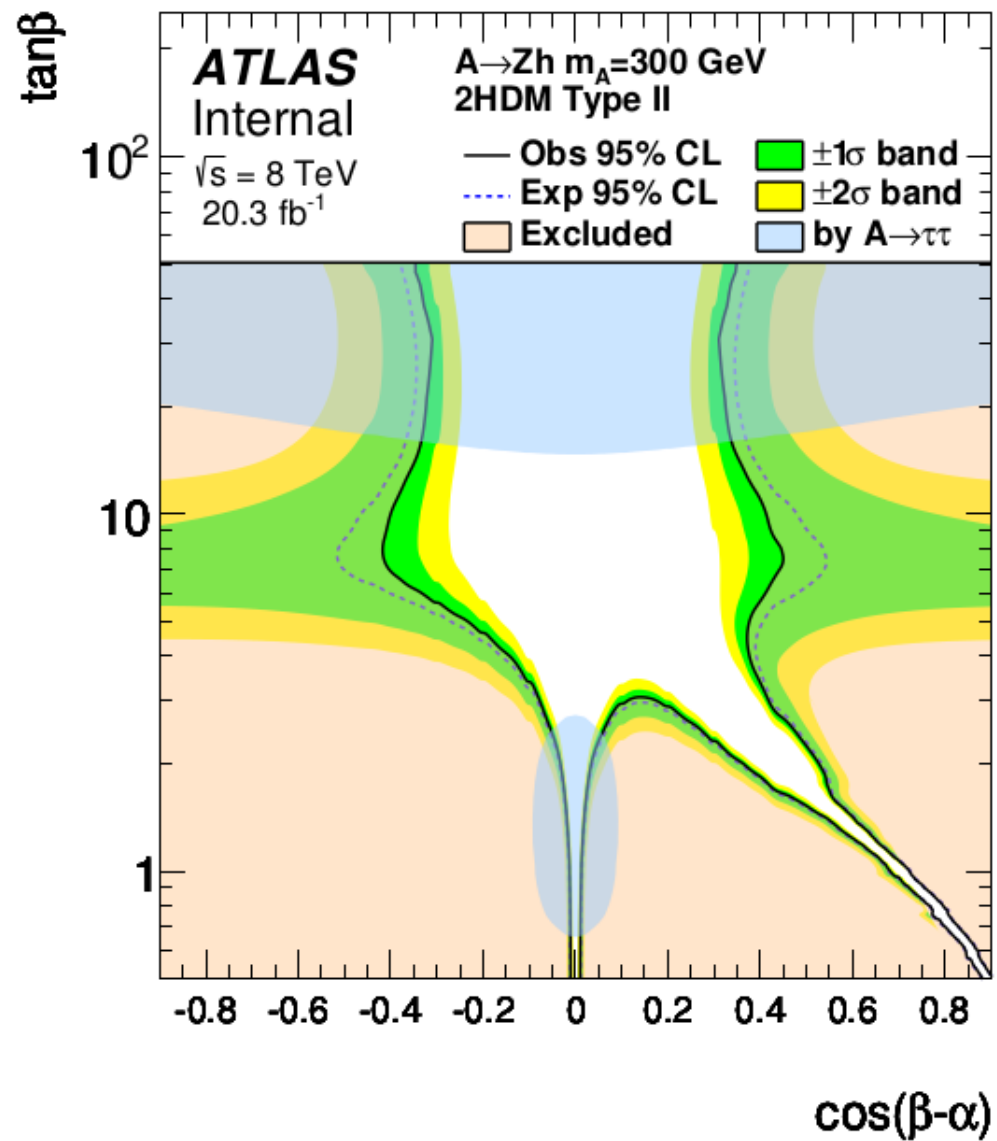

# New transparent style

- Proposed by Marumi, we are changing all the hatched styles into transparent styles and use pdf instead of eps

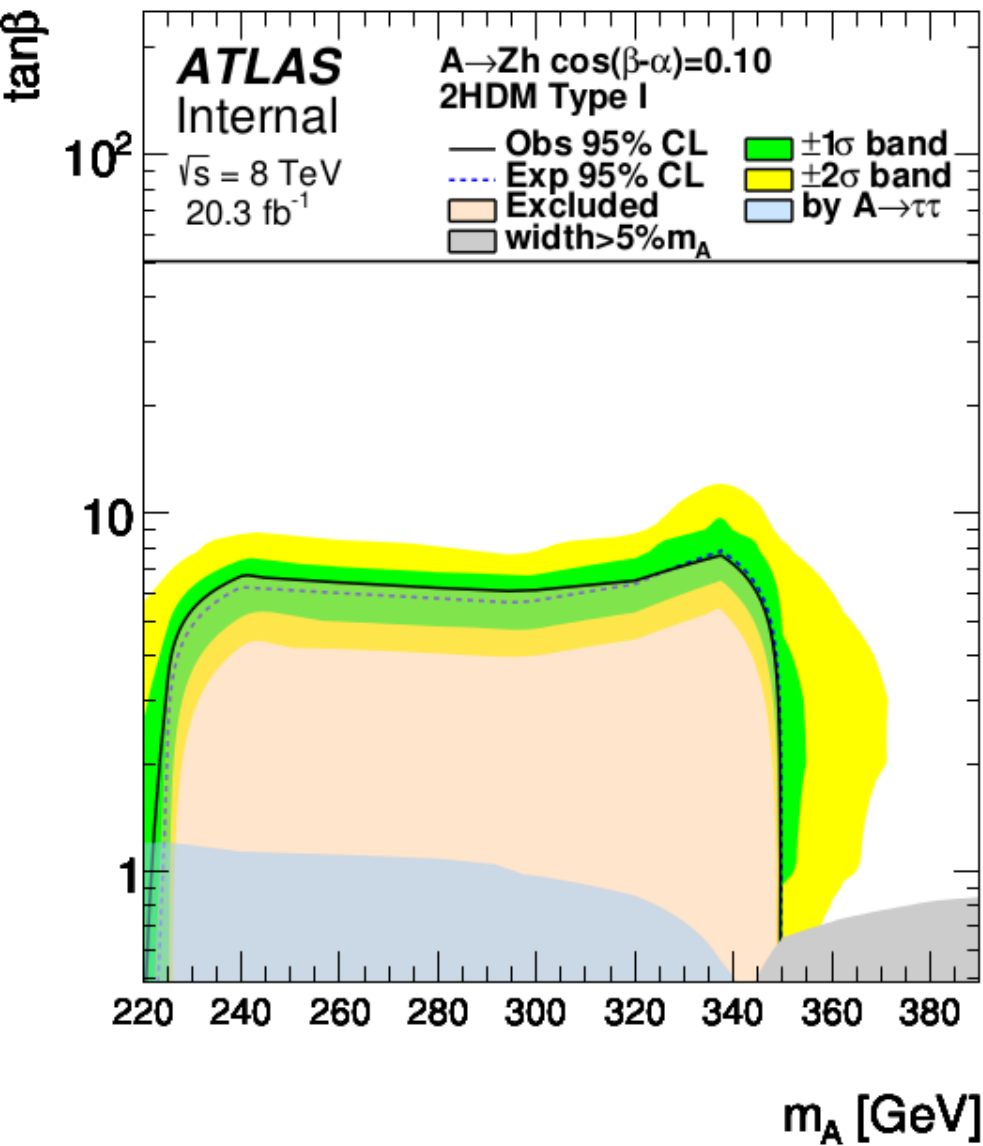

# 2HDM

# 2HDM

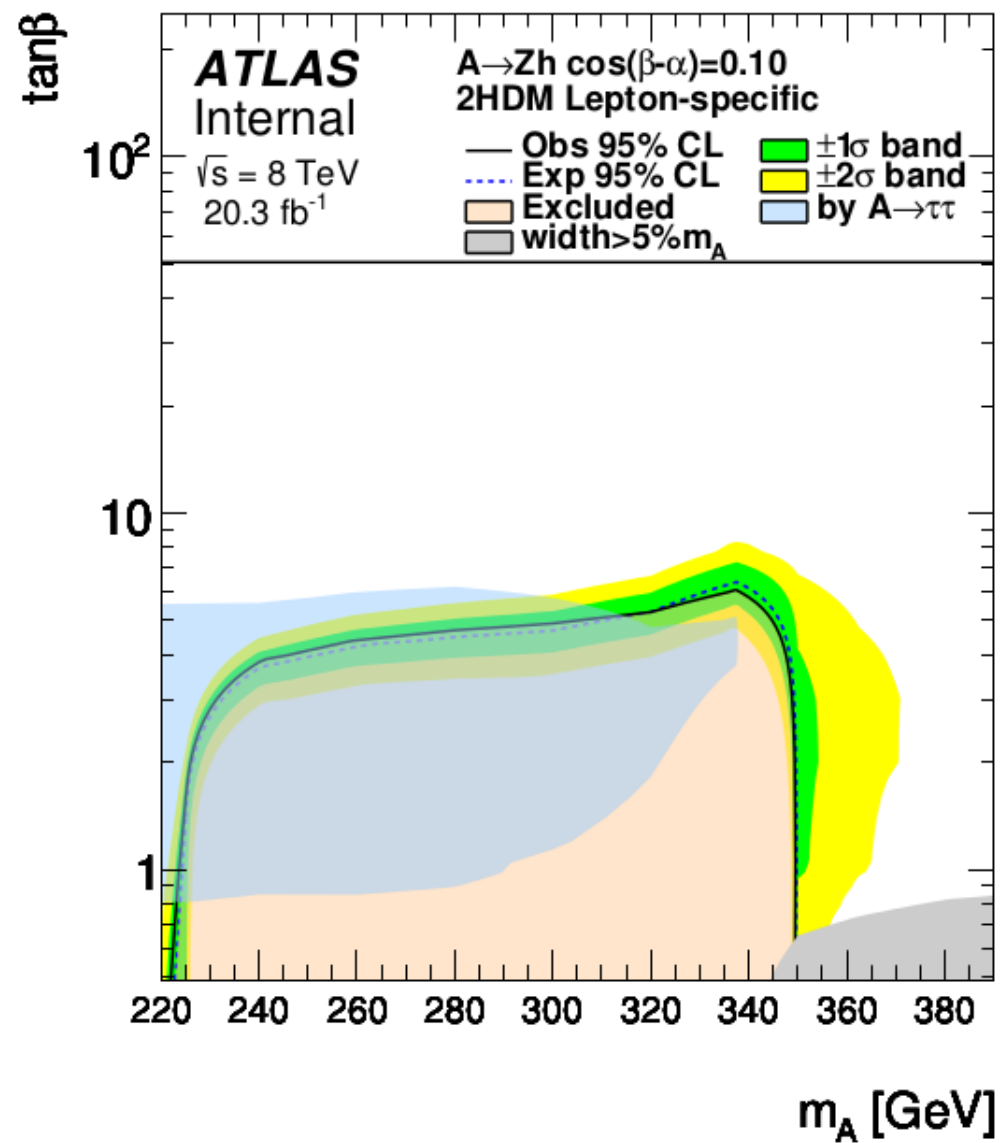

# 2HDM

# 2HDM

# AZh - summary

- 2HDM interpretation plots are made for 300 and 500 GeV, on the planes of  $\tan\beta$  vs  $\cos(b-a)$  and  $\tan\beta$  vs mass, covering type I, II, III (lepton-specific) and IV (flipped), all with final cosmetics ready in paper draft
- Branching ratio, width and bbA production effects are properly taken into account in the interpretation
- Only need to check bbA acceptance with the MC samples when they are ready
- 
- Quite recent:
- All plots 8 (main body) + 17 (auxiliary) are updated
- Asking for 2<sup>nd</sup> circulation Monday morning (CERN time)

# hh combination - updates

bbbb, bbyy  
bbtautau, wwyy

- Updated bbbb workspaces with all  $\mu$  set to 0, thanks to David
- Extending res combination 500, 800, 1000 GeV, including bbtatautau, wwyy and bbbb
- Many thanks to Liron and Junichi:
  - bbH samples request: JOs ready, validated, approved  
<https://its.cern.ch/jira/browse/ATLMCPROD-920>
  - VBF samples request: LHE & JOs ready, validated, approved  
<https://its.cern.ch/jira/browse/ATLMCPROD-957>
  - WWyy background samples, in preparation of LHE files  
<https://its.cern.ch/jira/browse/ATLMCPROD-974>

# hh combination - ws status

- A reminder of the workspace updates in last week:
  - bbbb: update with  $\mu=0$  in asimov
  - bbyy: no update
  - bbtatau: no update
  - wwyy: no update
- Thank all analyzers for providing the workspaces and welcome to any updates in them

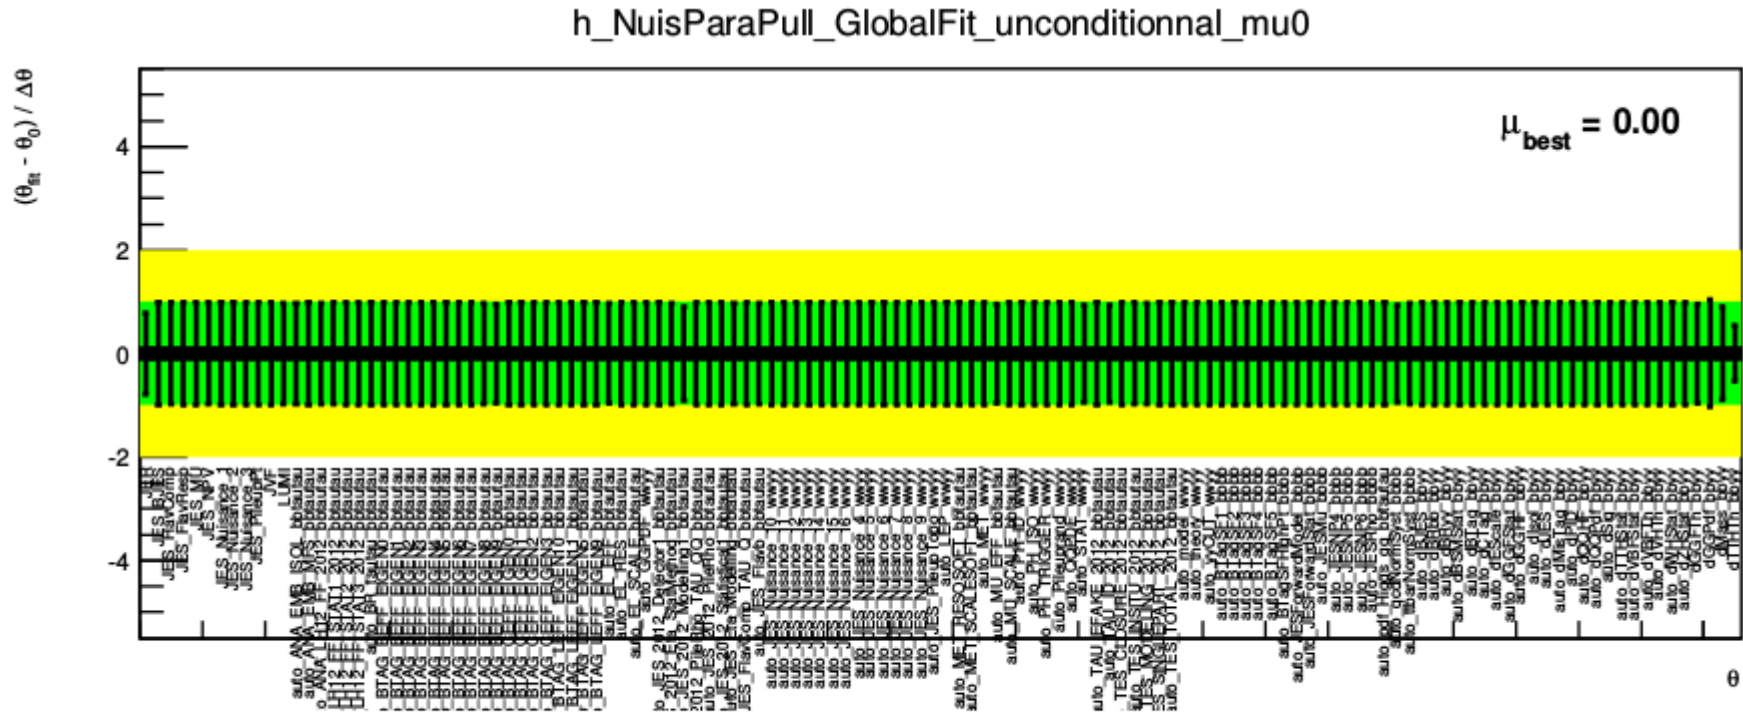

Figure 16: Nuisance parameter pull checks for non-resonance

# Pull check - bbyy

bbbb+bbby+bbtau+wwyy

look at bbyy-only workspace, tth theo nuisance parameter is constrained

h\_NuisParaPull\_GlobalFit\_unconditionnal\_mu0

	Cross		Scale	
	Section	up	down	
	[pb]	[%]	[%]	
ggh @ 125 GeV	19.27	+7.2	-7.8	
tth @ 125 GeV	0.1293	+3.8	-9.3	

Cross check with Jamie and Jahred, they also see smaller-than-one error from toys  
tth is the largest background in bbyy analysis and tth theo uncertainty is the asymmetrically the largest one  
it is possible to see the uncertainty is constrained

# Pull check - bbyy

bbbb+bbby+bbtau+wwyy

look at bbyy-only workspace, tth theo nuisance parameter is constrained

h\_NuisParaPull\_GlobalFit\_unconditionnal\_mu0

	Cross		Scale	
	Section		up	down
	[pb]		[%]	[%]
ggh @ 125 GeV	19.27		+7.2	-7.8
tth @ 125 GeV	0.1293		+3.8	-9.3

Cross check with Jamie and Jahred, they also see smaller-than-one error from toys  
tth is the largest background in bbyy analysis and tth theo uncertainty is the asymmetrically the largest one  
it is possible to see the uncertainty is constrained

# Nuis ranking - nonres

QCD norm bbbb

# Upper limits – nonres

- Expected upper limits [pb] are extracted
- Asymptotics is implemented

	OBS	EXP	+2sig	+1sig	-1sig	-2sig
bbbb	- <i>new</i>	0.594466	1.22212	0.853699	0.428346	0.319065
bbyy	- <i>new</i>	1.00546	2.39049	1.52719	0.724492	0.539658
wwyy	- <i>no change</i>	6.56869	15.034	9.85594	4.7331	3.52558
bbsautau	- <i>no change</i>	1.54221	3.41345	2.2871	1.11125	0.827747
combined	- <i>new</i>	0.440961	0.892447	0.631184	0.317737	0.236675

changes are slight due to the updates in bbbb workspace

# Pull check - 500 GeV

bbbb+bbyy+bbtau tau+wwyy

# Resonance

- Overview on nuisance parameters

	channel	syst nui	stat nui	total nui
updates	WWyy	37	1	38
	bbtatau	64	26	90
	bbyy	26	7	33
	bbbb	-	-	-
updates	comb	120	34	154

\* correlations:

all channels: lumi, JER  
wwyy and bbbb: JES\_FlavComp, JES\_FlavResp,  
JES\_Mu, JES\_NPV, JVF

# Correlation check - mH260

- check correlations in between each nuisance parameter

slight higher correlations come  
mainly from tautau individual nuisance parameters

# PLR curve check – mH260

- Check the profile likelihood ratio curve for individual channels

# Expected upper limits – res

# Interpretations

- Some thoughts in advance to the stage of interpretation
- 2HDM and others ...
- the branching ratios: light Higgs  $h \rightarrow \gamma\gamma/WW/bb/\tau\tau$
- the width effects:
- b-associated production: preparing JO for all channels
- overlay with  $AZh$  or  $A \rightarrow t\bar{t}$  or others from  $H \rightarrow WW/ZZ$  etc.

$y_{2\text{HDM}}/y_{\text{SM}}$	2HDM 1	2HDM 2	2HDM 3	2HDM 4
$HVV$	$c_{\beta-\alpha}$	$c_{\beta-\alpha}$	$c_{\beta-\alpha}$	$c_{\beta-\alpha}$
$HQu$	$c_{\beta-\alpha} - s_{\beta-\alpha}/t_\beta$	$c_{\beta-\alpha} - s_{\beta-\alpha}/t_\beta$	$c_{\beta-\alpha} - s_{\beta-\alpha}/t_\beta$	$c_{\beta-\alpha} - s_{\beta-\alpha}/t_\beta$
$HQd$	$c_{\beta-\alpha} - s_{\beta-\alpha}/t_\beta$	$c_{\beta-\alpha} + t_\beta s_{\beta-\alpha}$	$c_{\beta-\alpha} - s_{\beta-\alpha}/t_\beta$	$c_{\beta-\alpha} + t_\beta s_{\beta-\alpha}$
$HLe$	$c_{\beta-\alpha} - s_{\beta-\alpha}/t_\beta$	$c_{\beta-\alpha} + t_\beta s_{\beta-\alpha}$	$c_{\beta-\alpha} + t_\beta s_{\beta-\alpha}$	$c_{\beta-\alpha} - s_{\beta-\alpha}/t_\beta$
