

# 第十届 (2015)TeV 物理工作组学术研讨会

Saturday, August 8, 2015 - Sunday, August 9, 2015

Beijing

## Book of Abstracts

# Contents

Opening . . . . .	1
The Progress of Chinese ATLAS Group . . . . .	1
The Progress of Chinese CMS Group . . . . .	1
The Progress of Chinese LHCb Group . . . . .	1
Top Quark As Partons . . . . .	1
Heavy quarkonium production from top quark decay at the LHC . . . . .	1
Determining $V_{tb}$ at $e^+e^-$ collider . . . . .	1
Supersymmetry explanation of the Fermi Galactic Center excess and its test at LHC run II	2
Heavy colored SUSY partners from deflected anomaly . . . . .	2
Searching for Top Squarks in the Compressed Scenario . . . . .	2
Split Supersymmetry Under GUT and Current Dark Matter Constraints . . . . .	2
Approach to High Precision Higgs Production . . . . .	2
extra Higgs bosons in the alignment . . . . .	2
The Higgs boson profile . . . . .	3
Disentangling the new physics via the correlation of the single Higgs and double Higgs productions . . . . .	3
The simple non-Abelian extensions and Diboson excesses at the LHC . . . . .	3
Di-boson Resonance Searches at CMS . . . . .	3
Low Scale Composite Higgs and 2 TeV Di-boson Excess . . . . .	3
Precision calculations of semileptonic B decays . . . . .	3
Dark matter signals at future high energy colliders . . . . .	3
Search for dark matter at colliders . . . . .	4
Possible large CP violation in three body decays of heavy baryon1 . . . . .	4

LHC phenomenology of the type II seesaw: Observability of neutral scalars in the nondegenerate case . . . . . 4

11

## **Opening**

**Corresponding Author:** wangq@mail.tsinghua.edu.cn

12

## **The Progress of Chinese ATLAS Group**

**Corresponding Author:** jins@ihep.ac.cn

13

## **The Progress of Chinese CMS Group**

**Corresponding Author:** maoyj@pku.edu.cn

14

## **The Progress of Chinese LHCb Group**

15

## **Top Quark As Partons**

**Corresponding Author:** than@pitt.edu

16

## **Heavy quarkonium production from top quark decay at the LHC**

**Corresponding Author:** gang.li@uah.edu

17

## **Determining $V_{tb}$ at $e^+ e^-$ collider**

Corresponding Author: binyan@pku.edu.cn

18

## **Supersymmetry explanation of the Fermi Galactic Center excess and its test at LHC run II**

Corresponding Author: jmyang@itp.ac.cn

19

## **Heavy colored SUSY partners from deflected anomaly**

20

## **Searching for Top Squarks in the Compressed Scenario**

Corresponding Author: kechen@ihep.ac.cn

21

## **Split Supersymmetry Under GUT and Current Dark Matter Constraints**

Corresponding Author: wywang@mail.itp.ac.cn

22

## **Approach to High Precision Higgs Production**

23

## **extra Higgs bosons in the alignment**

Corresponding Author: yunjiang@ucdavis.edu

24

## **The Higgs boson profile**

Corresponding Author: chenms@ihep.ac.cn

25

## **Disentangling the new physics via the correlation of the single Higgs and double Higgs productions**

26

## **The simple non-Abelian extensions and Diboson excesses at the LHC**

Corresponding Author: qinghongcao@pku.edu.cn

27

## **Di-boson Resonance Searches at CMS**

28

## **Low Scale Composite Higgs and 2 TeV Di-boson Excess**

Corresponding Author: jshu@itp.ac.cn

29

## **Precision calculations of semileptonic B decays**

Corresponding Author: yuming.wang@tum.de

31

## **Dark matter signals at future high energy colliders**

32

**Search for dark matter at colliders**

33

**Possible large CP violation in three body decays of heavy baryon**

34

**LHC phenomenology of the type II seesaw: Observability of neutral scalars in the nondegenerate case**
