23 May, 2016

Introduction

❖ sample status

- non-res: done!
- res: waiting for PMG approval;

❖ $hh \rightarrow 4W$

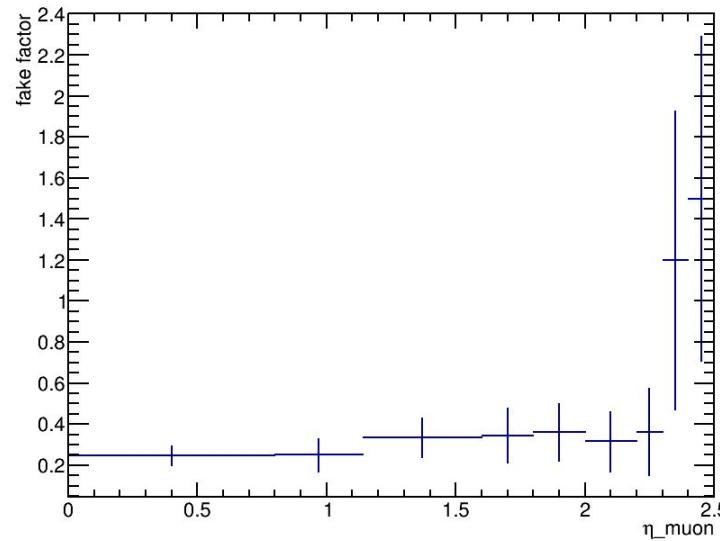

- fake factor closure test on mumu channel with MC;
- pheno side: almost final results given;

❖ Track seeding

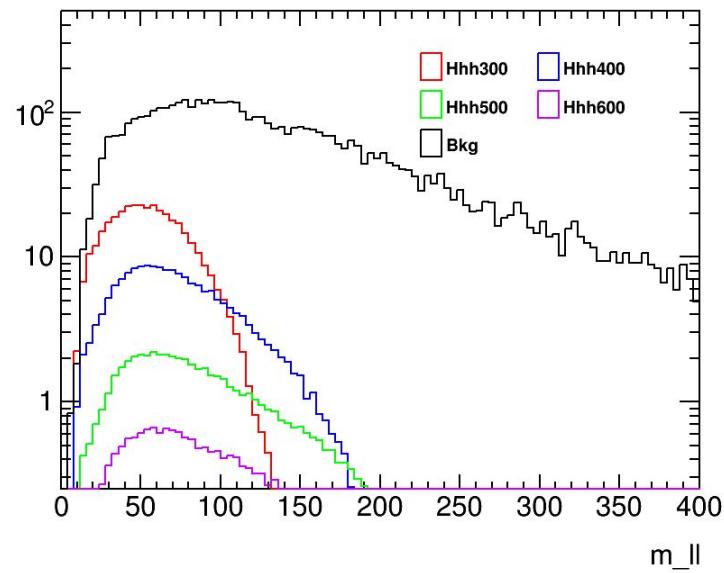

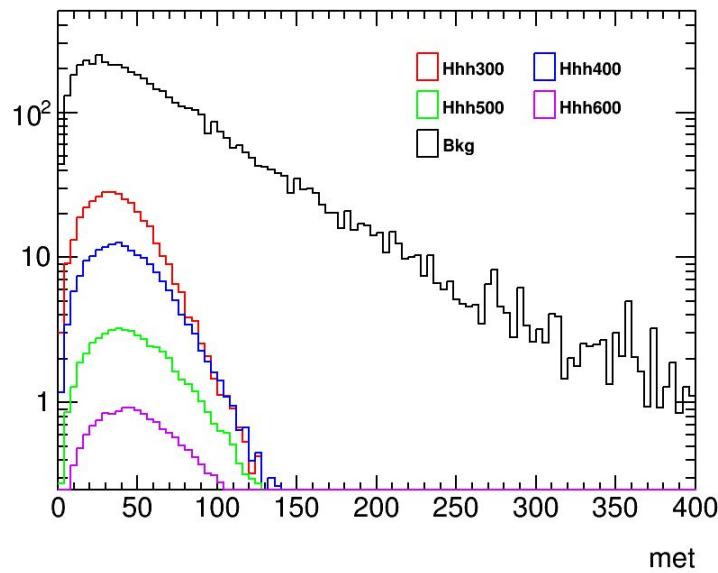

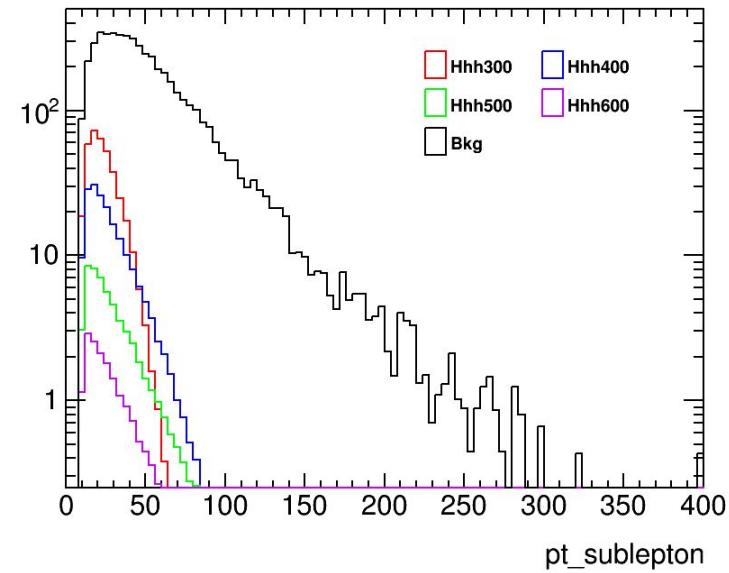

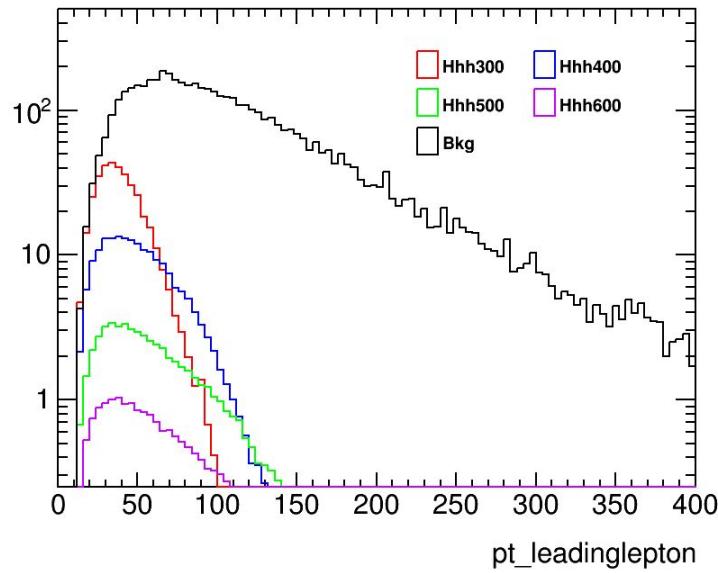

Closure test

- ❖ Perform the same procedure on ttbar samples for mumu channel, ignoring QmisID;
- ❖ Estimate fake factor from regions: $1 \leq N_{\text{jet}} < 3$;
- ❖ $\theta_\mu \text{ Sys: } 19.0\%$.

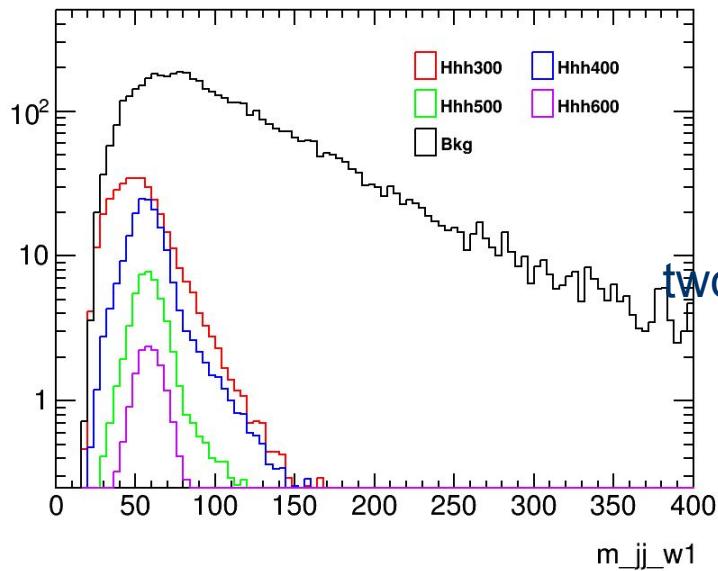

flavor	region	predicted	simulated	systematic
muon	==3 jet	127.23	103	19.0%

Track Seeding

- ❖ valid3 samples used;
- ❖ PPP in barrel;

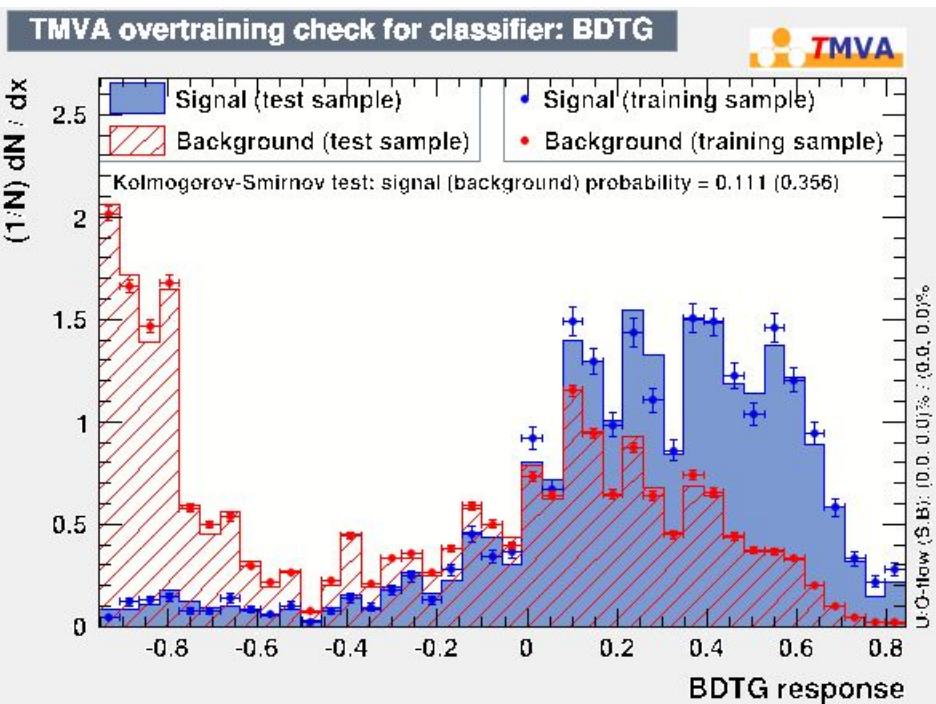

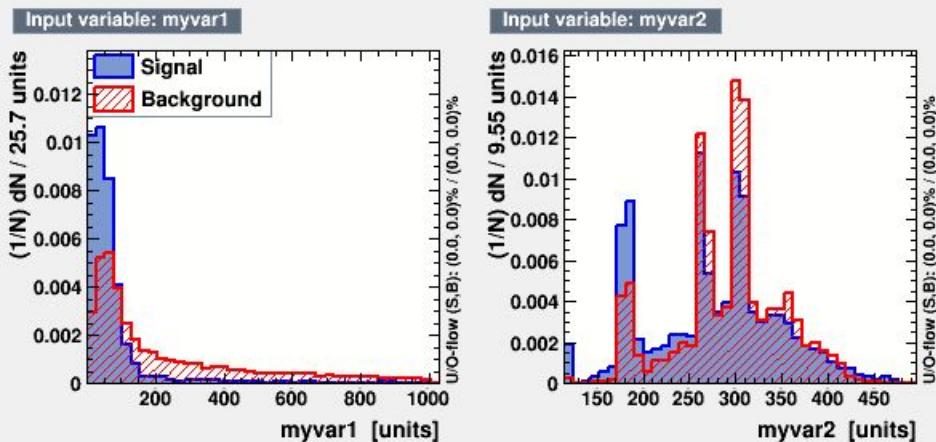

$$\text{var1} = \sqrt{(100d_0)^2 + (z_0)^2}$$

$$\text{var2} = \sqrt{r_1^2 + r_2^2 + r_3^2}$$

- update to new samples
- goodness of seeds:

$$G = \frac{f_{survival}}{f_{fake}} = \frac{N_{survival}^{good}}{N^{good}} \div \frac{N^{total} - N^{good}}{N^{total}}$$

- how many associated good seeds survived for per truth particle

To do list

- ❖ Non-res derivations, signal optimizations;
- ❖ Fix jet fakes excess in emu channel;
- ❖ Validate fake factor of electrons;
- ❖ Uncertainties.
