

Exotic quarkonium-like states and spectroscopy at Belle

Friday, 1 September 2017 14:25 (25 minutes)

We report the recent results on the measurement of charmonium-like and bottomonium-like resonances at Belle. The report includes the first observation of $Z_b(10610) \rightarrow B\bar{B}$ and $Z_b(10650) \rightarrow B\bar{B}^*$ and studies of bottomonium-like state using $\Upsilon(5S)$ and $\Upsilon(6S)$ data taken at Belle. We also report measurements of B decays to charmonium and charmonium-like states.
