Hits

- Tracking lose part of hits in overlap region, which is relative with phi angle.

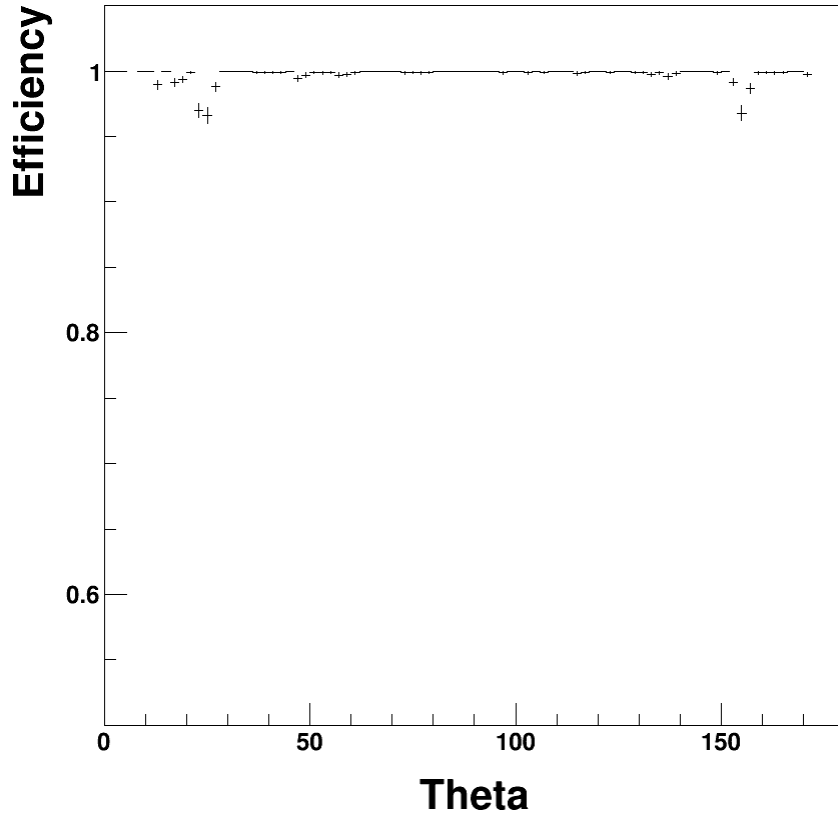

- InitialiseVTX(LCEvent *evt)
- InitialiseFTD(LCEvent *evt)
- ProcessOneSector(iPhi,iTheta)
 - TestTriplet(...)
- TrackingInFTD()
 - TestTriplet(...)
- Difficult to track-finding using VTX and FTD together? Not a good idea?
- What is best triplet to start?

```

```

Way to improve efficiency

- LayerCombinations
- Tracking with VTX and FTD together
- Design of silicon-tracker
 - Make sure at least 3 layer VTX or 3 layer FTD at any theta direction
 - Not cost-optimized, but temporarily before optimizing the tracking algorithm

backup

- Is onSurface check necessary? Since boundary has been checked while smearing
- Digitization

```
Hit = 1 has cellId 33751331
side = 1
