

CDR Discussion

How much time we have

Manqi Ruan

Tasks ahead

- Detector Geometry Design

- ILD-like:

- Key parameter selections
 - Key performance
 - Key questions (Potentially No-Go)

- Significant Beyond ILD: any good idea?

- Systematic errors...

- Software Chain: A continuous effort of 3-5 years.

- Physics Potential

- Higgs Mostly done. Benchmarks need be iterated at new geometry
 - EW, Z ??
 - Flavor, ??
 - ... theoretical errors Progressing

CDR Content

- Physics & Detector
- Physics Side
 - Benchmark detector geometry & Benchmark performances
 - Validation/Specification of these geometries
 - Higgs Physics
 - Accuracy at CEPC_v1 Mostly done
 - [Extrapolation to New Benchmark Geometry?](#)
 - EW Performance
 - With at least 1 channel covered by full simulation
- *Detector Side: Try to help in answering potentially No-Go questions for sub-detector design*

Physics Benchmarks

Benchmarks	Main observables	Key performances	Status
llH, H->X	Higgs recoil spectrum	Lepton Id efficiency, Tracker intrinsic momentum resolution	Well understood
H+X, H->di photon	Event reconstruction efficiency, Higgs invariant mass peak width	Tracker Material, Intrinsic ECAL energy Resolution	
ZH->4 jets,	Br(H->bb, cc, gg)	Jet clustering, PFA: Jet Energy Resolution, Jet Flavor Tagging	Studied at CEPC conceptual Detector (CEPC_v1)
vvH, H->di tau	Efficiency of Tau reconstruction with different tau decay mode	PFA separation, Impact parameter resolution	
qqH, H->invisible	Higgs recoil spectrum	PFA: Jet Energy Resolution	
vvH, H->WW->lvqq	Event Reconstruction Efficiency di-jet mass distribution	PFA, Simultaneous reconstruction of Lepton, Jets and Missing Energy	Studied at different Calorimeter Granularity
H+X, H->di muon	Event reconstruction efficiency, Higgs invariant mass peak width	Lepton Id efficiency, Tracker intrinsic momentum resolution	Studied at CEPC conceptual Detector
vvH, H->2 jets	Br(H->bb, cc, gg)	Jet Energy Resolution & Flavor Tagging	
WW->lvqq	W mass	Jet Energy resolution & Systematic controls	Full simulation analysis not accomplished yet

Each analysis will be repeated at different geometry, with full Higgs signal sample
(and potentially WW sample)

Fix Basic Geometry

- Benchmark detector geometry
 - ECAL Layout Done
 - [HCAL Layout](#) ~ 2 months
 - Tracker Size
 - for tracking performance Done
 - [PFA Performance](#) ~ 2.5 months
 - [B-Field Strength](#) ~ 1 months
 - [Integrated with a reliable MDI](#) ???
- ~ half a year is needed to fix the basic geometry of the detector, with a full support from the analysis team.
- Very unfortunate, many key players will leave us soon

Summary

- Core Content Could be secured
 - Para. Opti. w.r.t. ILD
 - Key performance & answer to key questions
 - Need to have enough skillful manpower in analysis team (even!)
- My personal P.o.V: not very likely that we will converge at something significantly beyond ILD (esp. In 2 years...)
 - But would be good to give arguments, either opposite. Or support ILD
- Long term activities, including software development, should be put in operation now.

Detector performance

Acceptance	$ \cos(\theta) < 0.995$ (from the inner radius of the outmost tracking disk)
Tracking Efficiency	For isolated charged particle with energy $> 1\text{ GeV}$: $\sim 100\%$
Photon Reconstruction Efficiency	For isolated photon with energy $> 0.5\text{ GeV}$: $\sim 100\%$
Tracker resolution	$\delta(1/P_T) = 2 \cdot 10^{-5} (\text{GeV}^{-1})$
ECAL intrinsic resolution	$\delta E/E = 16\%/\sqrt{E/\text{GeV}} \oplus 0.5\%$
HCAL intrinsic resolution	$\delta E/E = 60\%/\sqrt{E/\text{GeV}} \oplus 1\%$
Jet energy resolution	$\delta E/E = 4\%$
Typical Distance for shower separation	$< 3\text{ cm}$
Lepton identification	For charged particle with Energy $> 2\text{ GeV}$: Lepton identification efficiency $> 99.5\%$, $P(\text{hadron} \rightarrow \mu\text{on}) \sim P(\text{hadron} \rightarrow \text{electron})$: 1%
b-tagging	At Z pole samples & $\text{eff}(b \rightarrow b) = 80\%$, $P(\text{uds} \rightarrow b) < 1\%$, $P(c \rightarrow b) \sim 10\%$
c-tagging	At Z pole samples & $\text{eff}(c \rightarrow c) = 60\%$, $P(\text{uds} \rightarrow c) = 7\%$, $P(b \rightarrow c) = 12\%$

Performance at full reconstruction

*Benchmark separation distance $< 3\text{ cm}$
(Testing on 10 GeV Pion + 5 GeV Photon Sample)*
