

# Summary from Particle Physicist's Point of View

Bedřich Roskovec  
Pontificia Universidad Católica de Chile

Beijing  
23/7/2017

# My Work

Covered by Ran and Zhe

Geoneutrino flux  
Measurement

# Your Work

---

Geoneutrino flux  
Prediction

Geoneutrino flux  
Measurement

# Comparison: The Most Important Thing

# 3D Emission Model

---

Our ultimate goal

3D emission model  
of Southern China

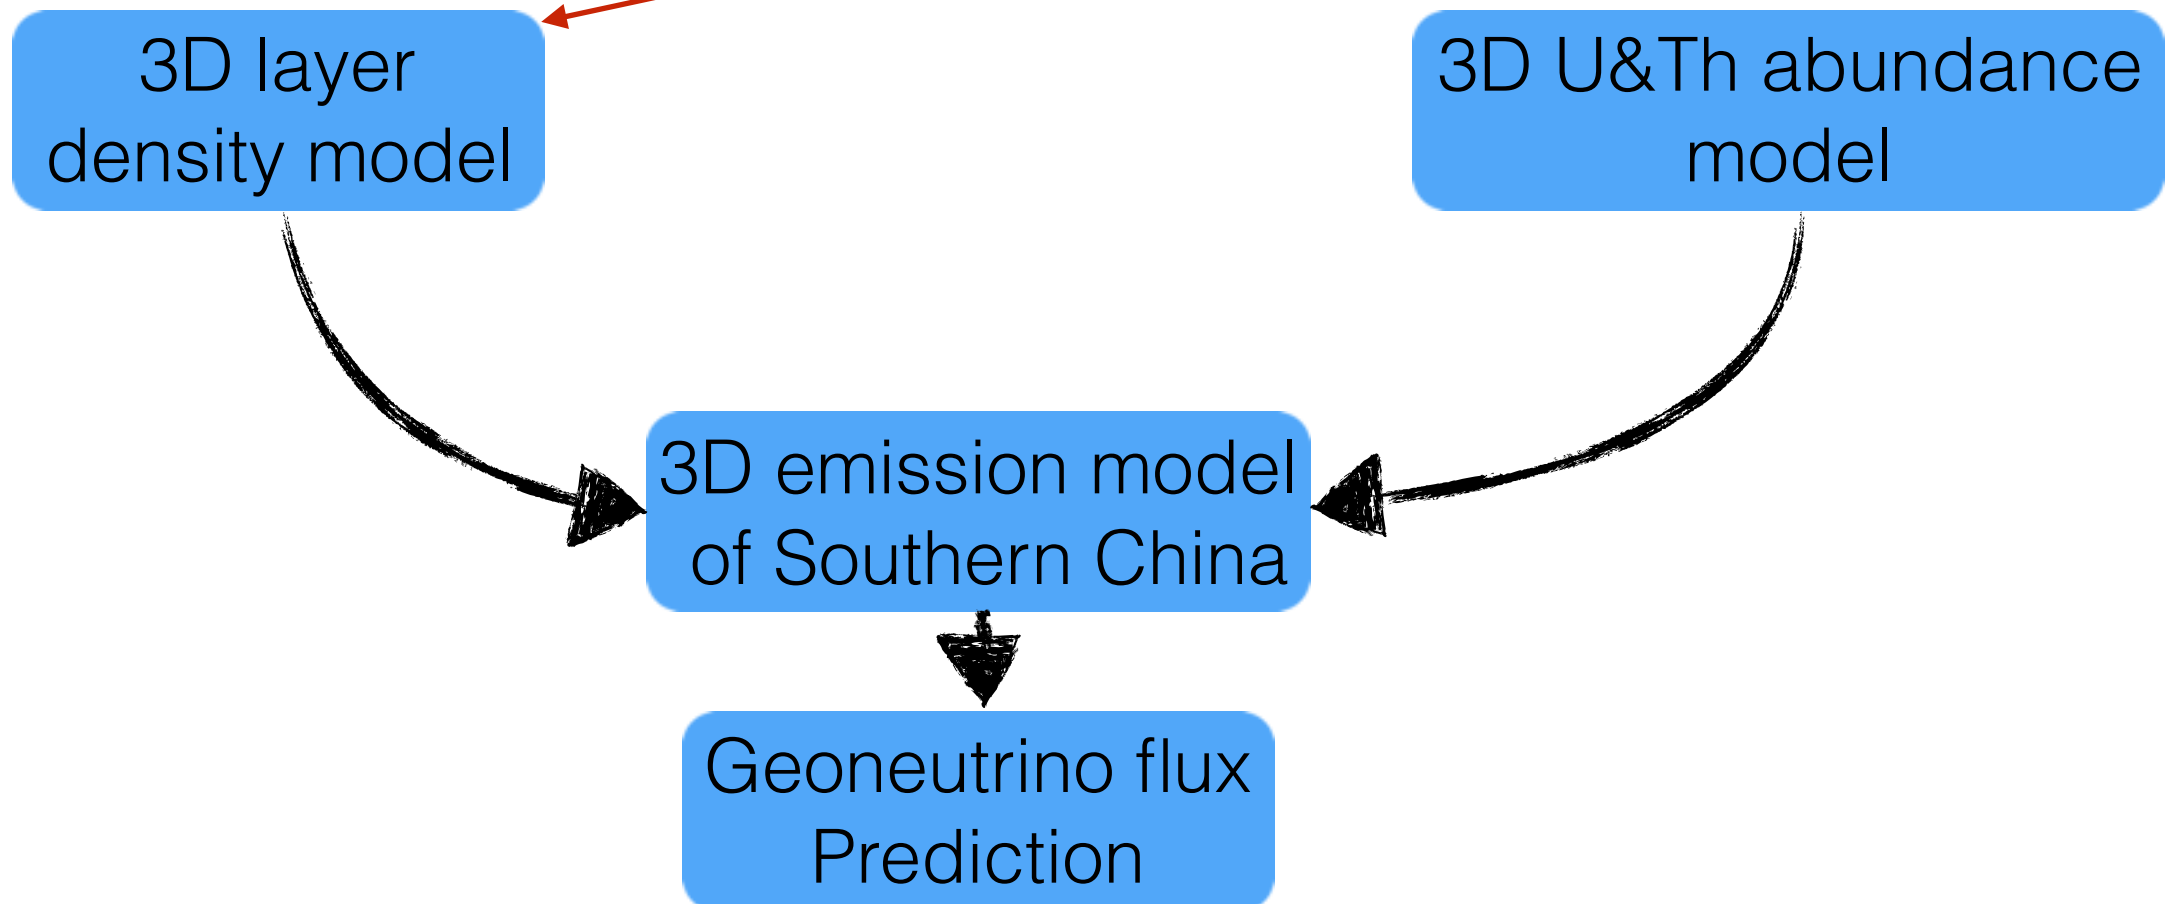

Geoneutrino flux  
Prediction

# Model Ingredients

$$\frac{d\phi(\vec{r}, E)}{dE} = n(E) \int \frac{P(E, |\vec{r} - \vec{r}'|)}{4\pi|\vec{r} - \vec{r}'|^2} \frac{X N_A}{\tau A_r} f_m(\vec{r}') \rho(\vec{r}') d\vec{r}'$$

# 3D Layer Model

---

3D layer  
density model

# Seismic Data Input (1)

Seismic data

Covered by several speakers

3D layer density model

From Mian's talk:

From Liang's talk:

**Grids:**

**$0.5^\circ \times 0.5^\circ$  :  $\sim 55 \text{ km} \times 55 \text{ km}$**

**Resolution:**

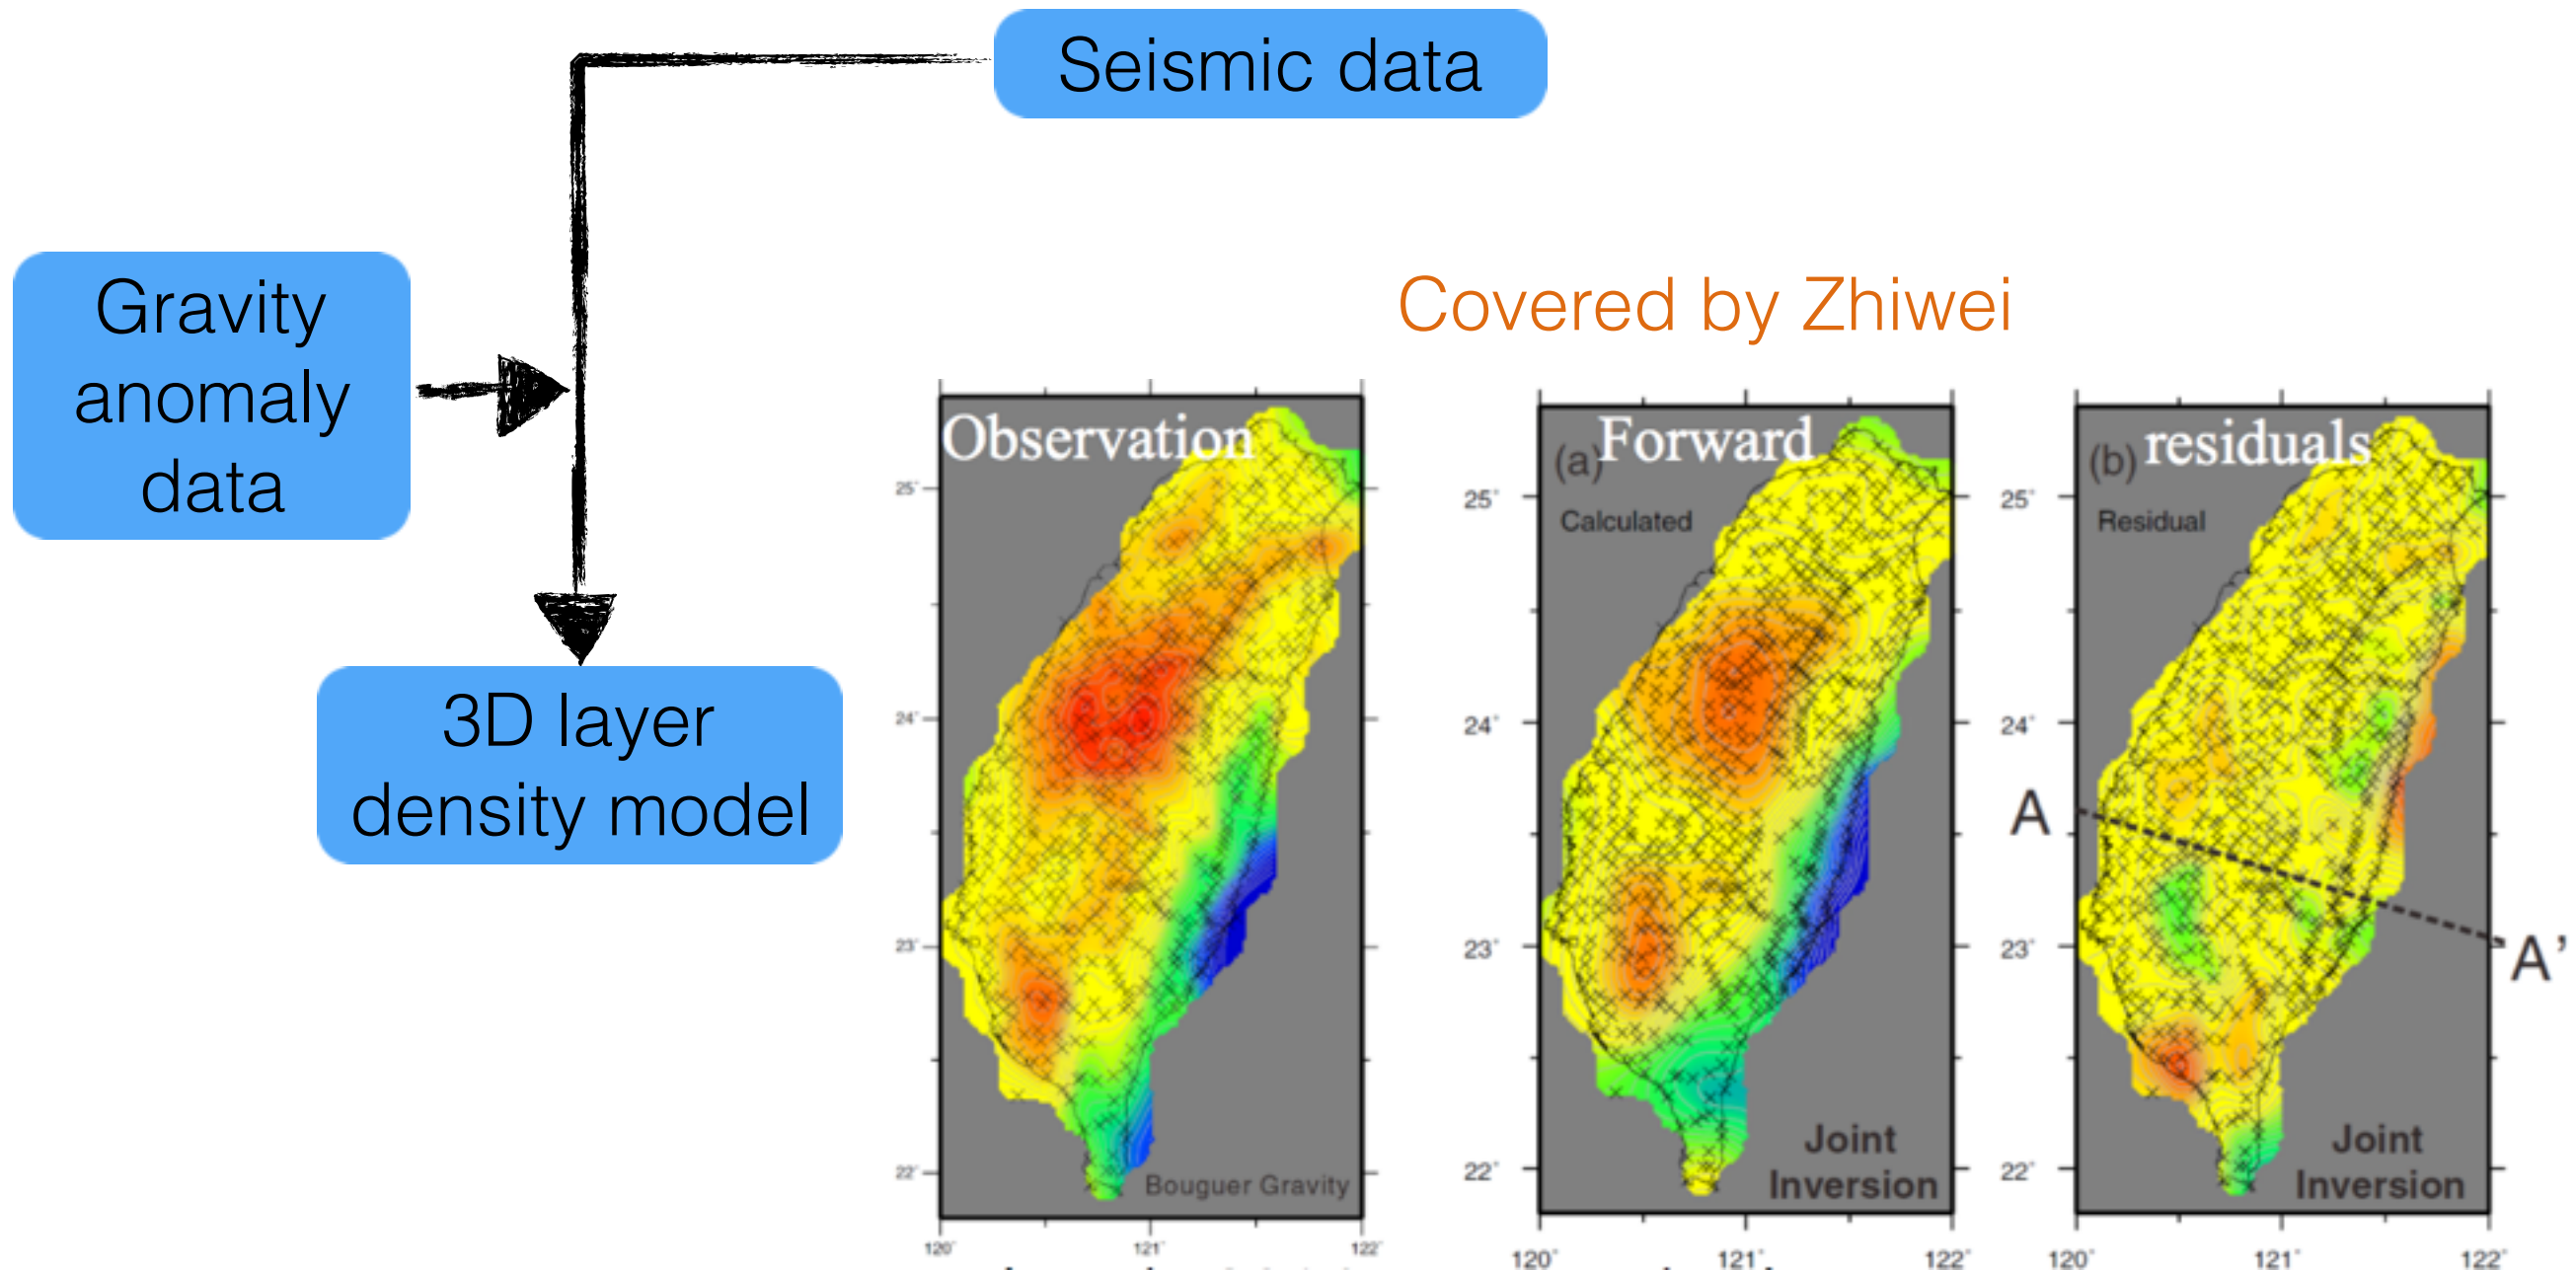

**$1^\circ \times 1^\circ$  :  $\sim 110 \text{ km} \times 110 \text{ km}$**

From Ondřej's talk:

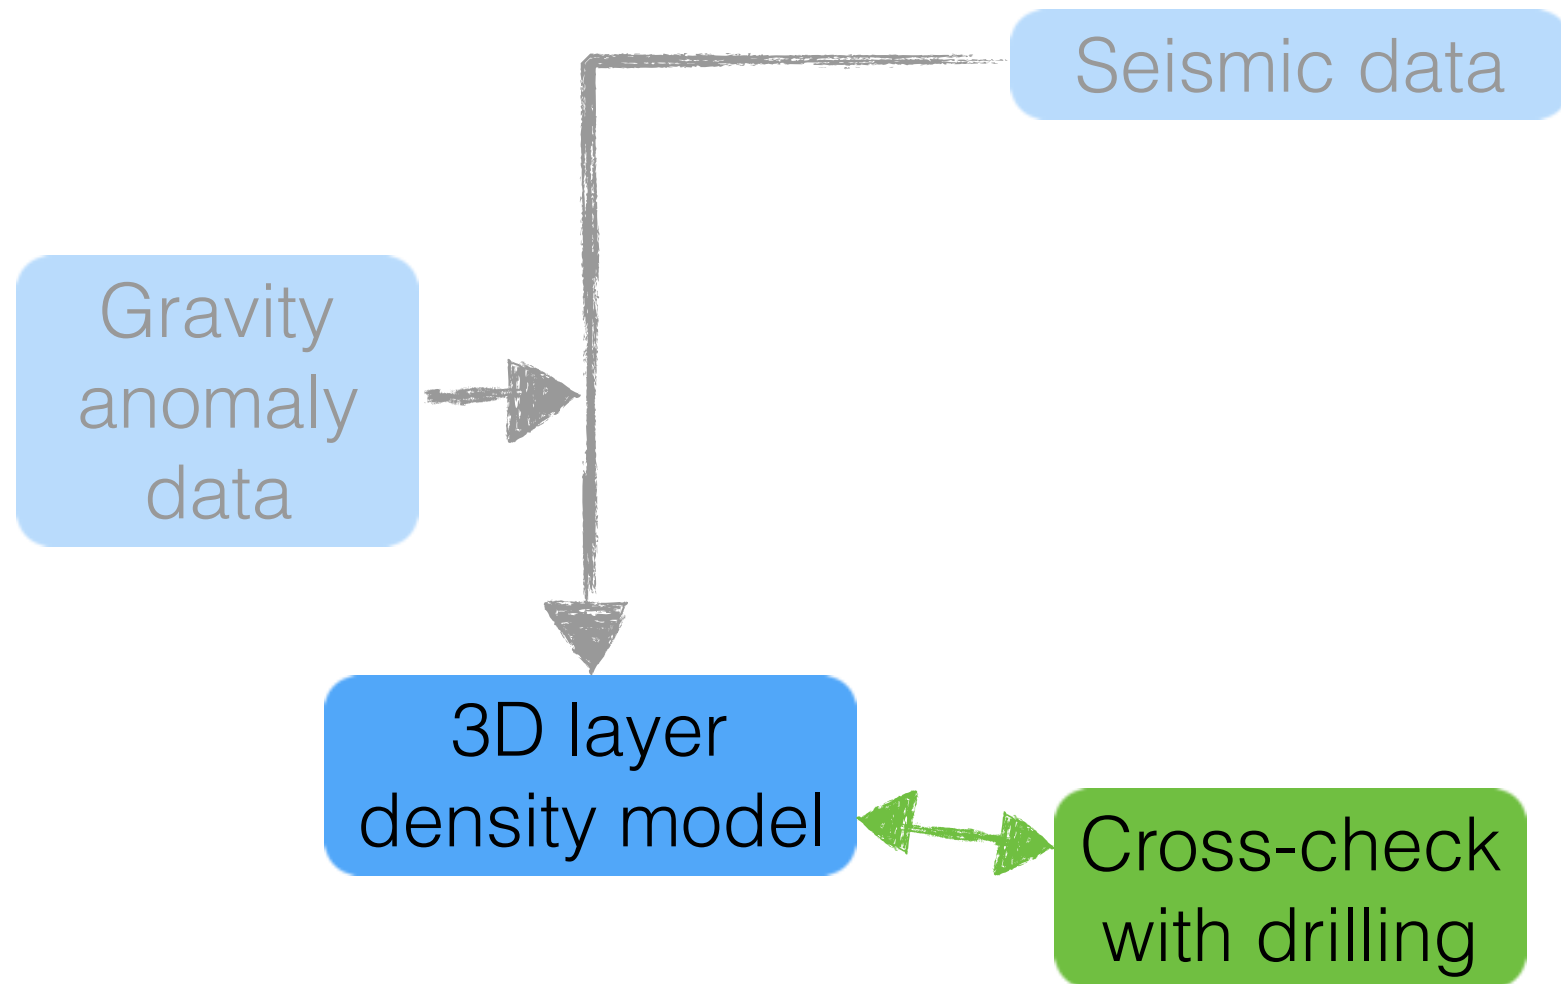

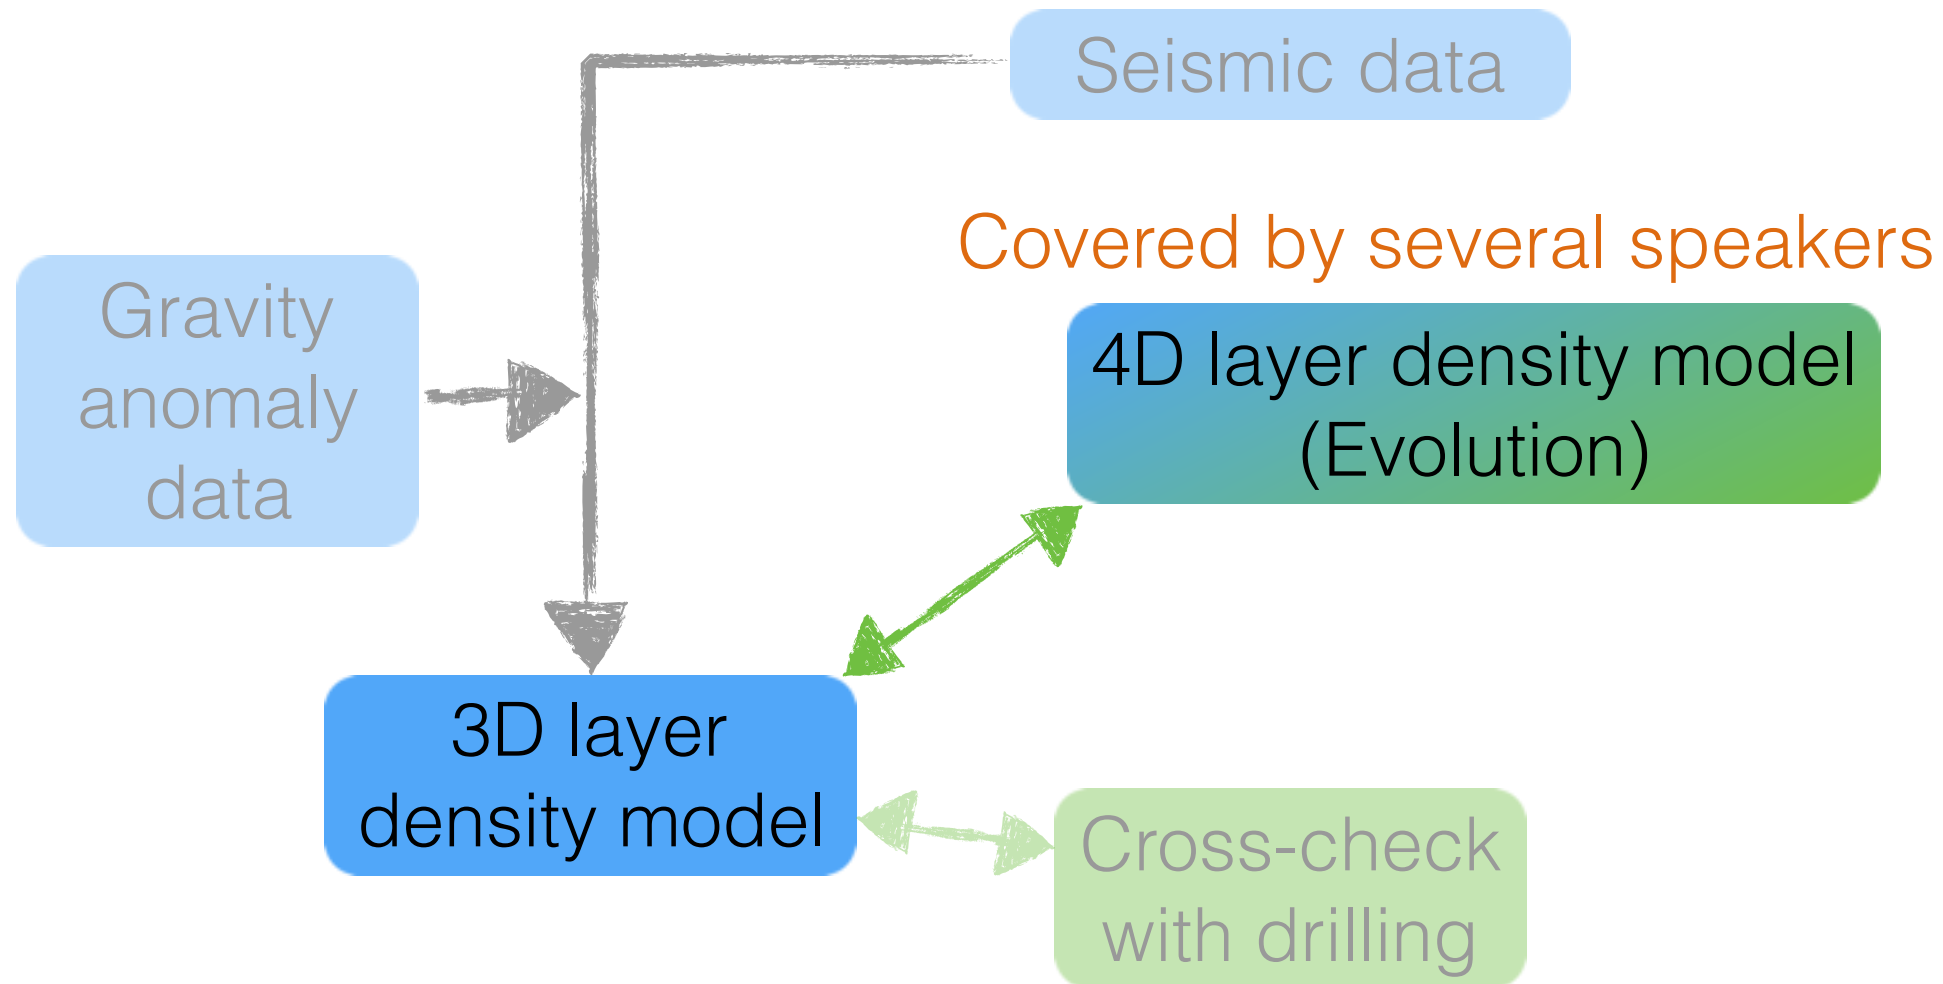

# Gravity Measurements

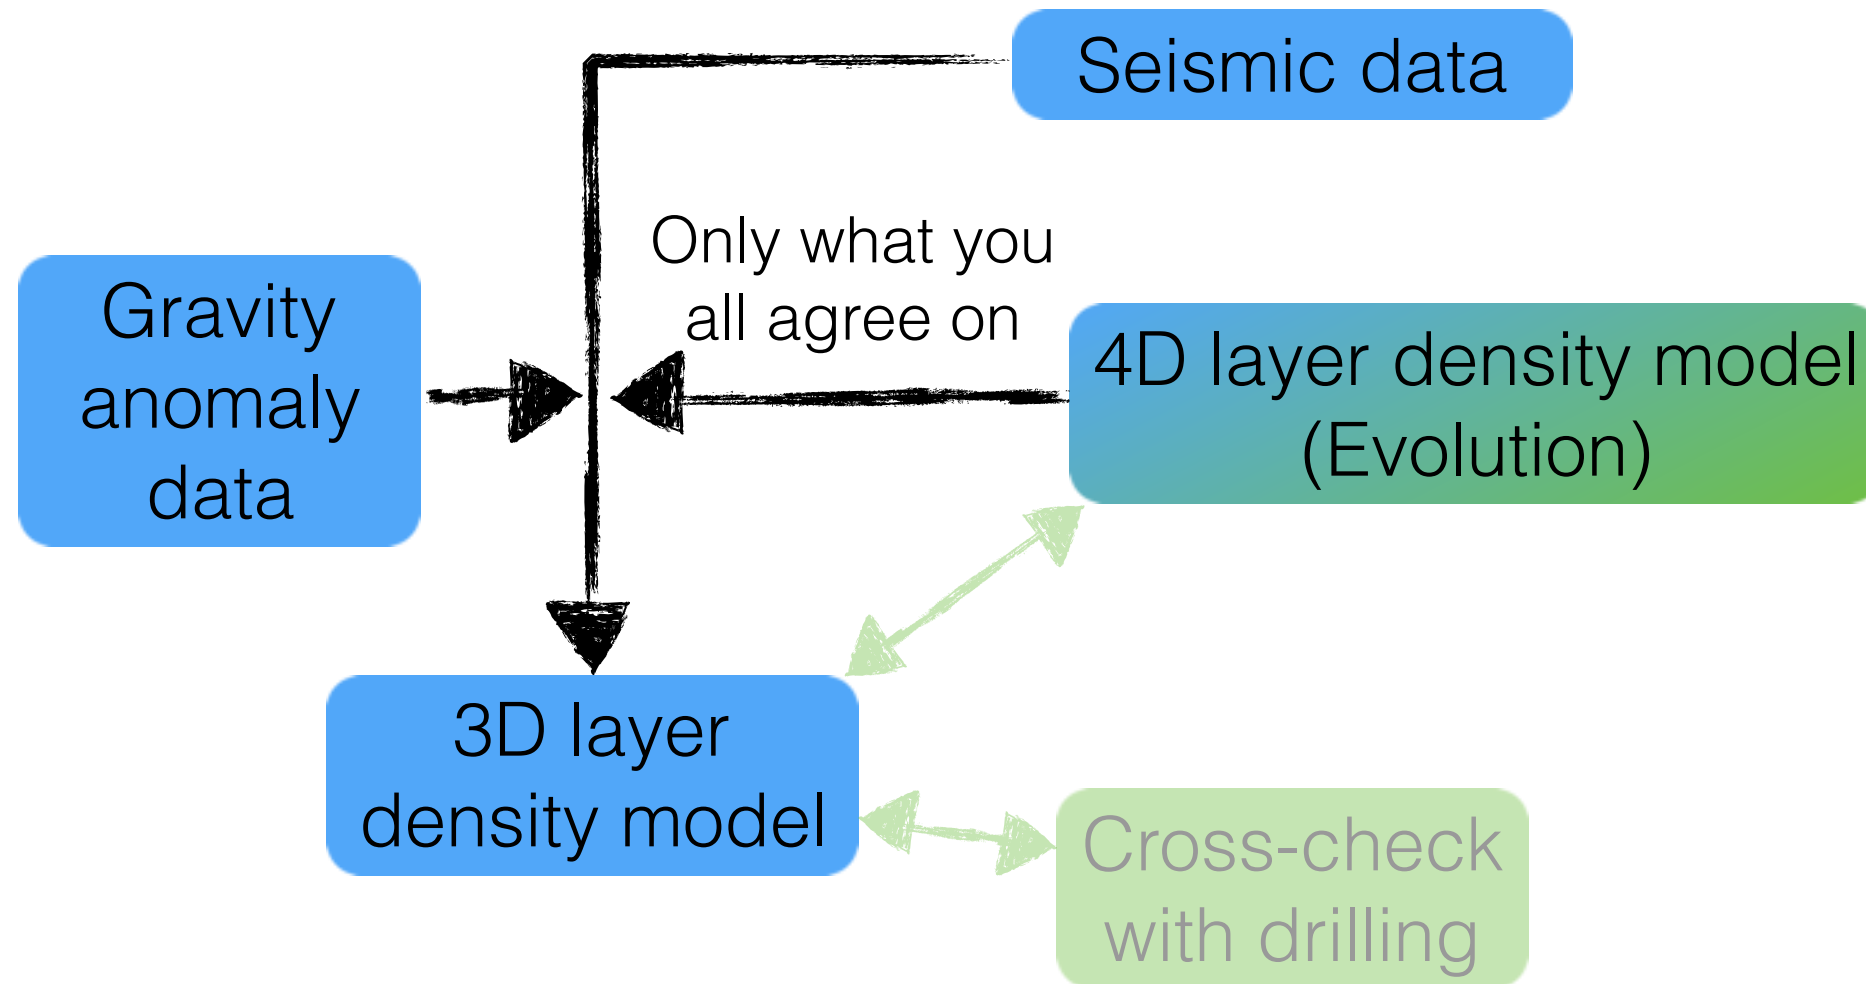

# Cross-check with Boreholes (1)

# Cross-check with Evolution

# Input from Evolution

# 3D Uranium and Thorium Model

---

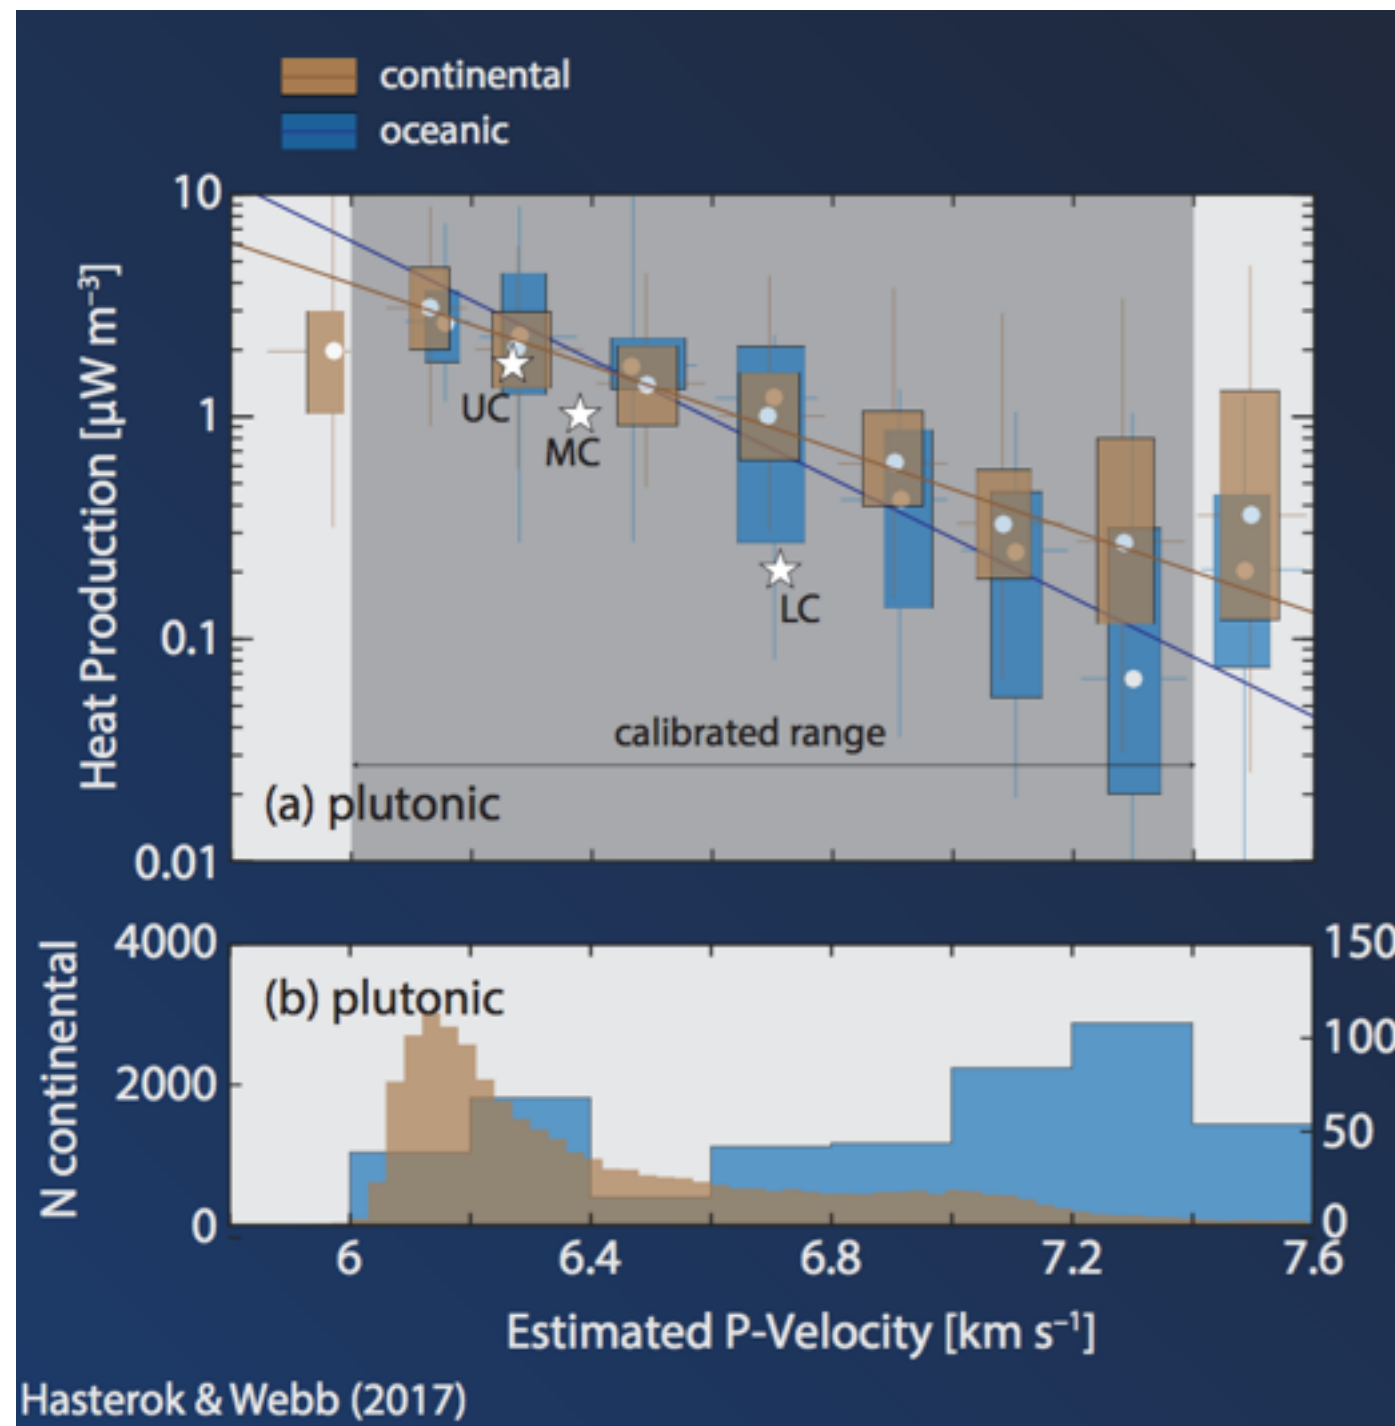

3D U&Th abundance  
model

# Seismic Data Input (2)

Derrick's talk

Seismic data

Sample collection

3D U&Th abundance model

# Cross-check with Boreholes (2)

Irina's talk

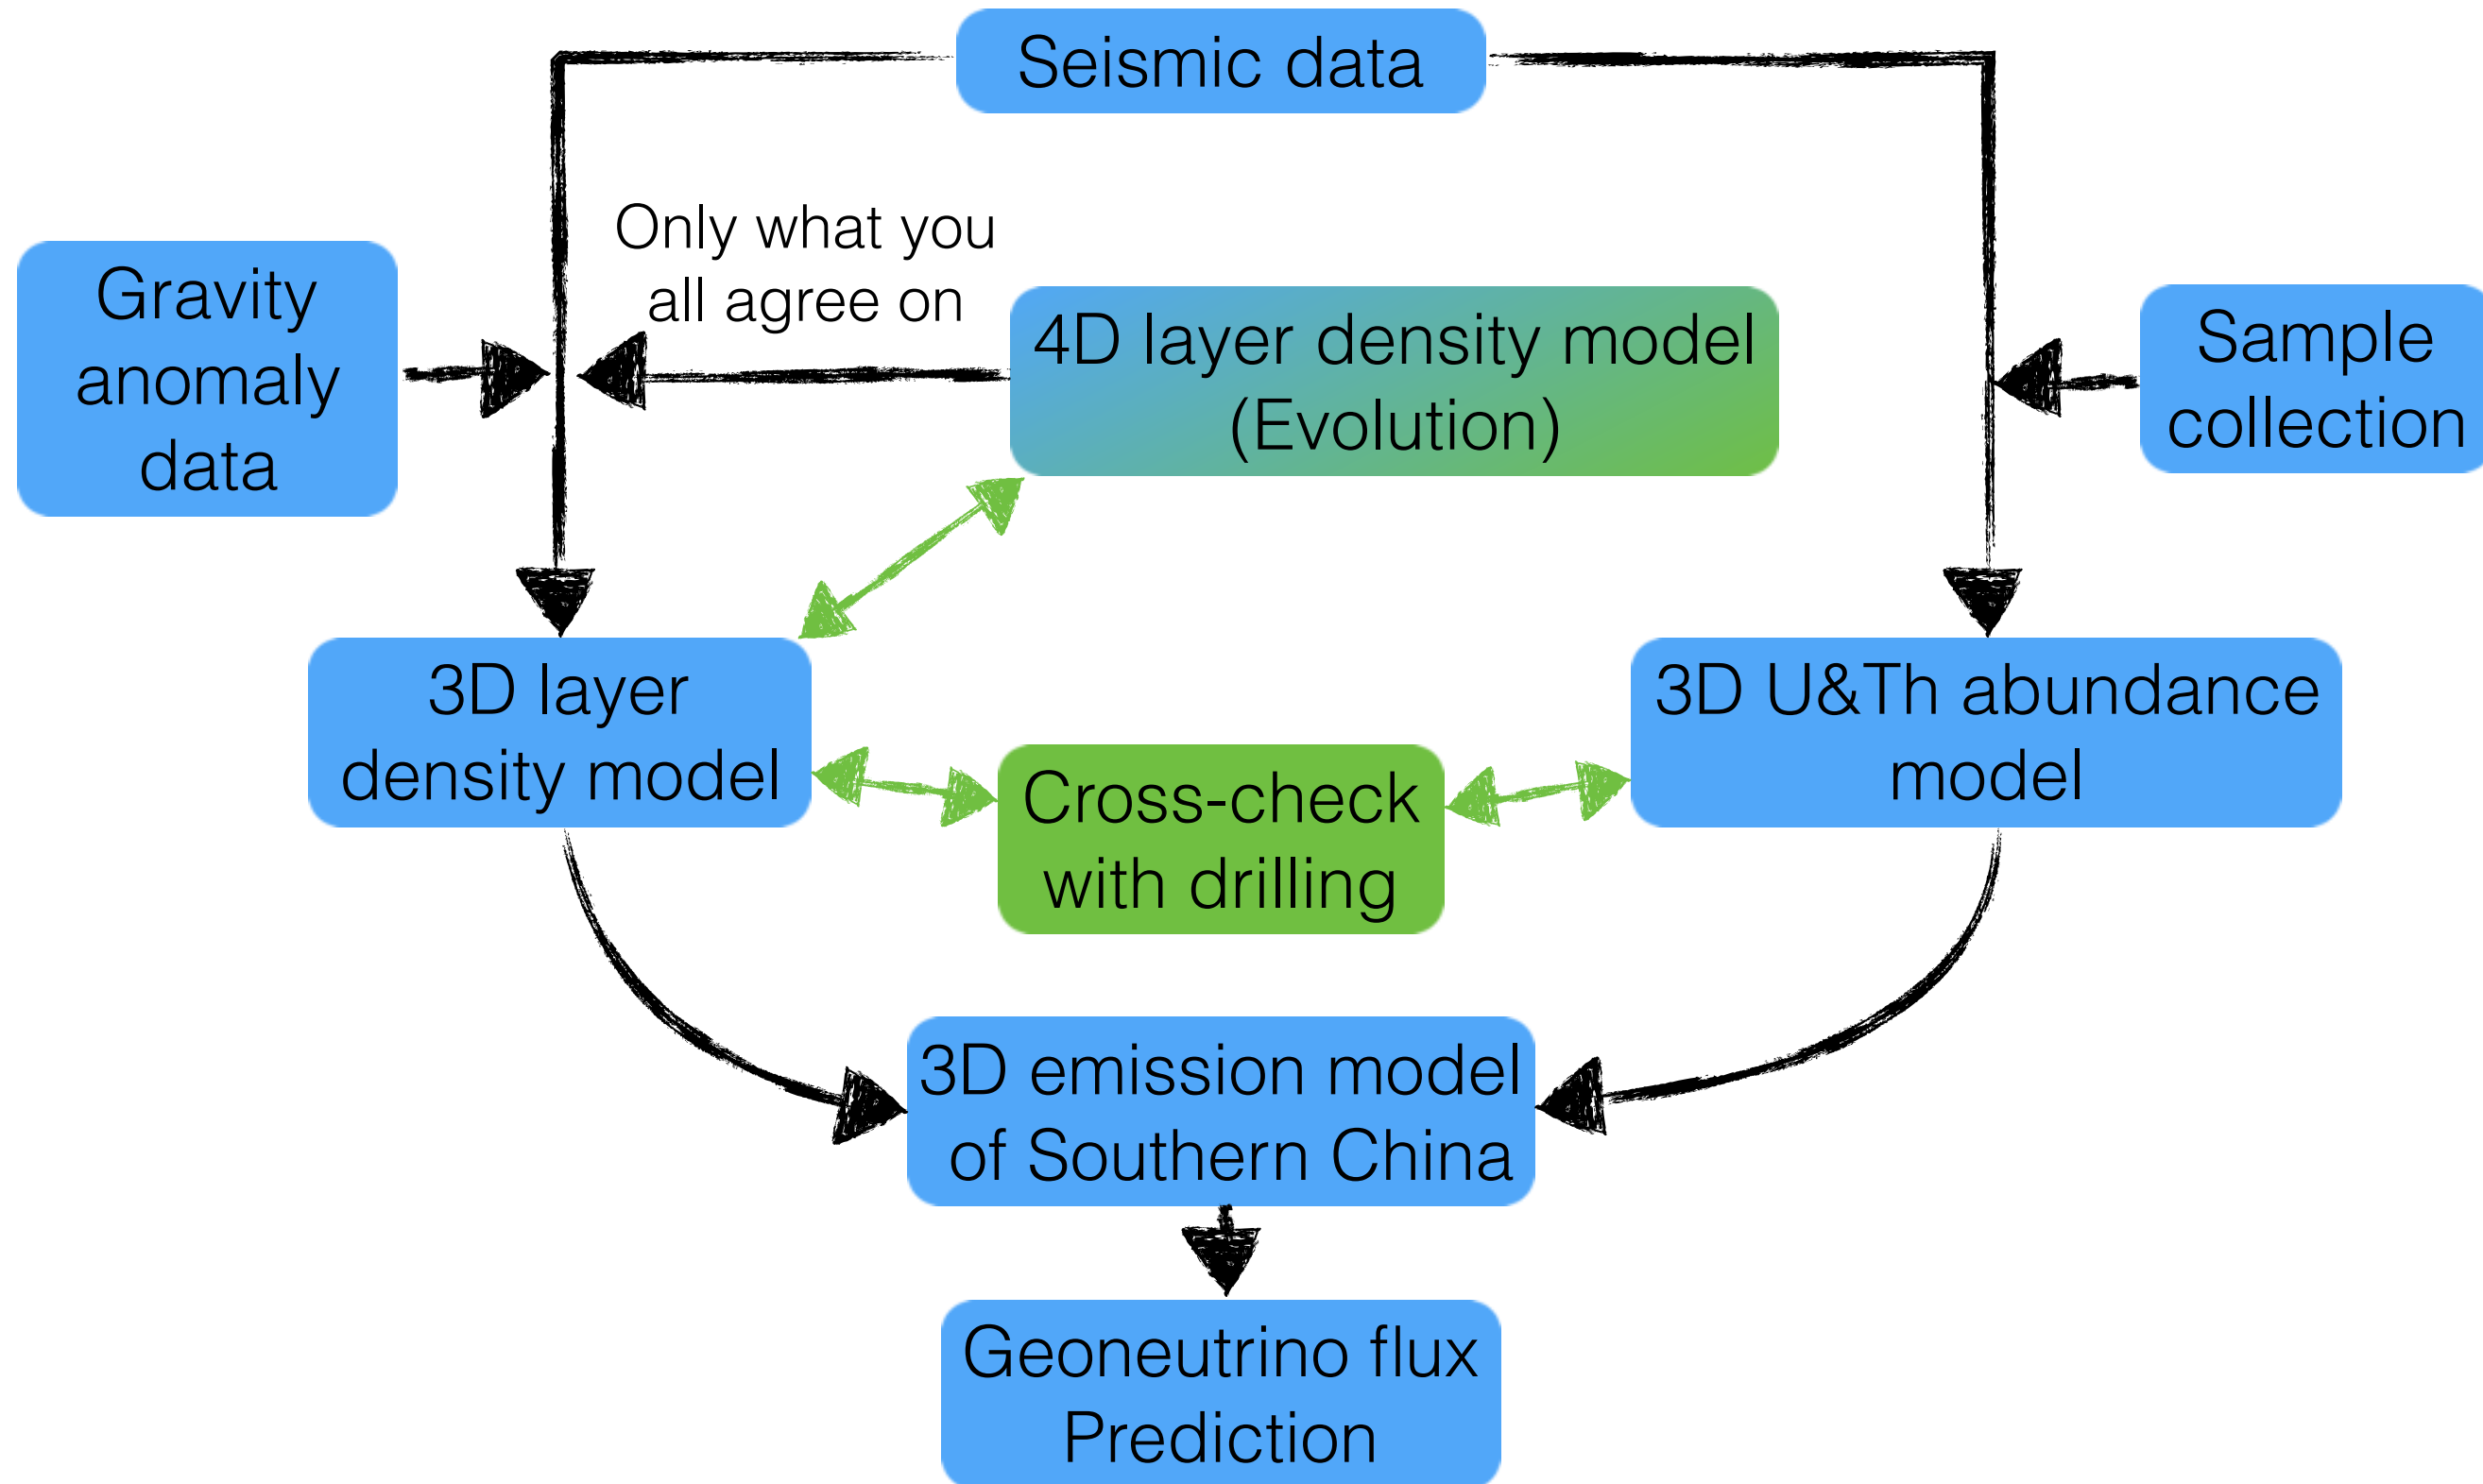

Seismic data

Sample collection

3D U&Th abundance model

Cross-check with drilling

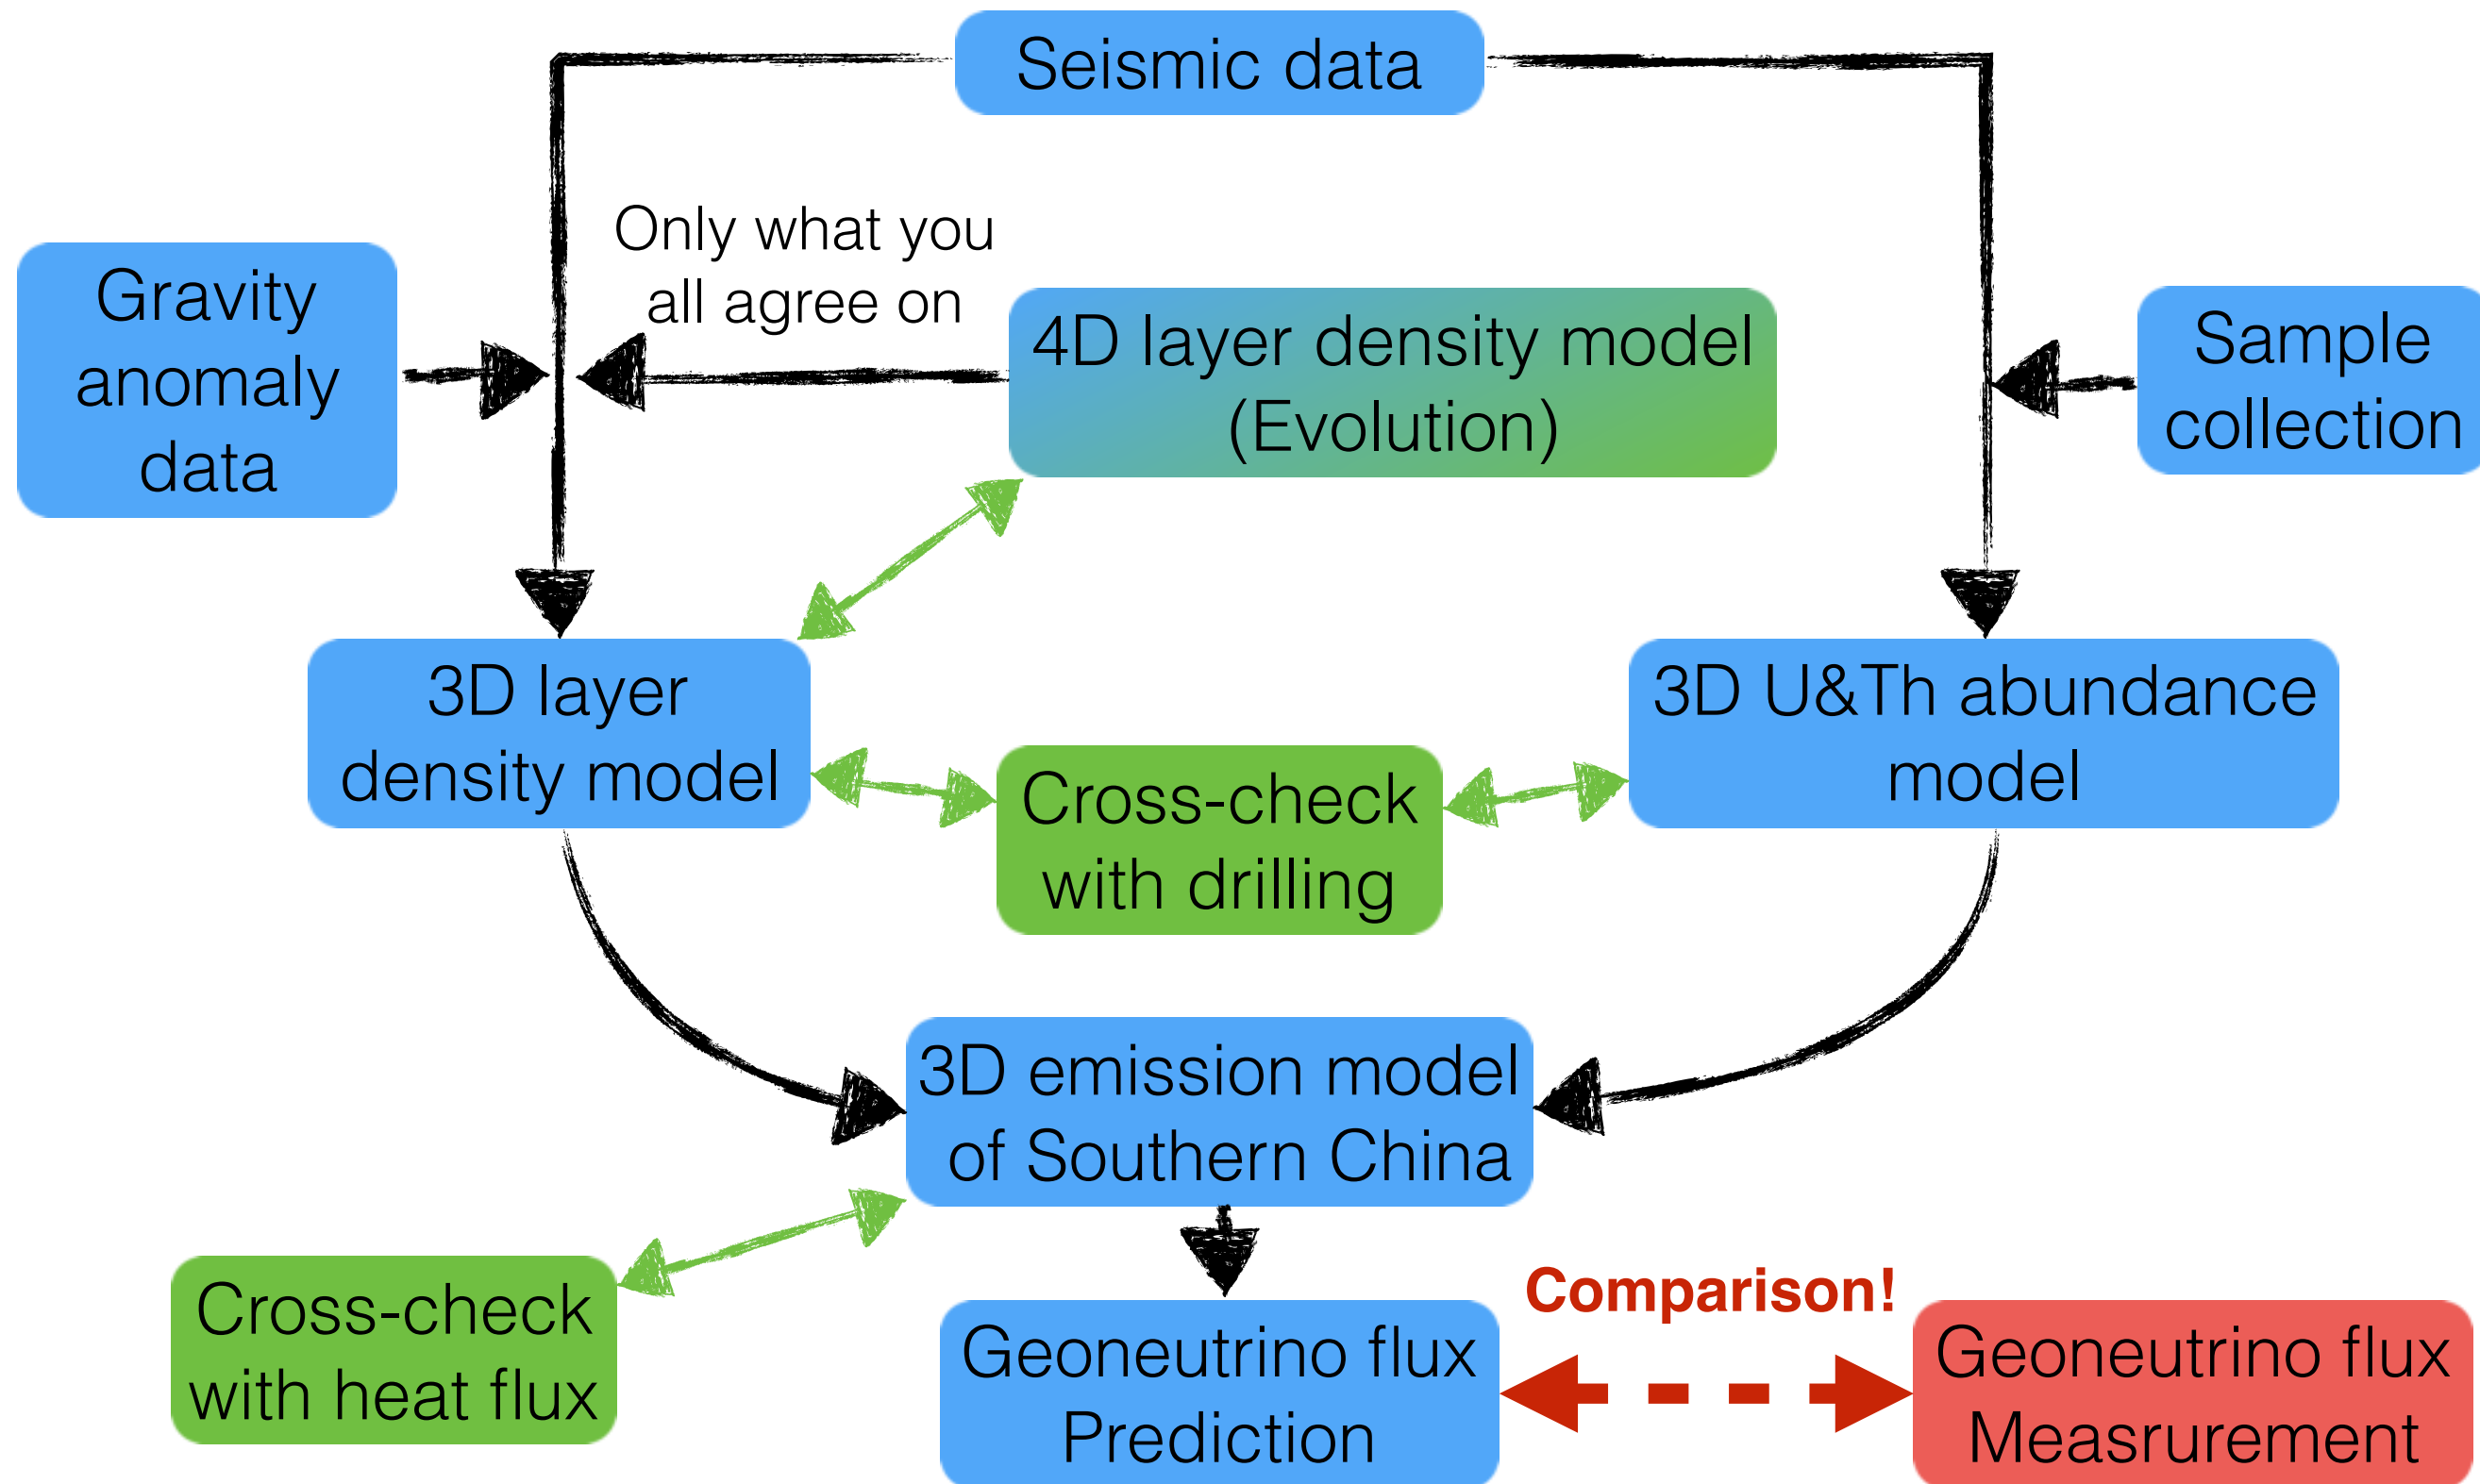

# Anything else?

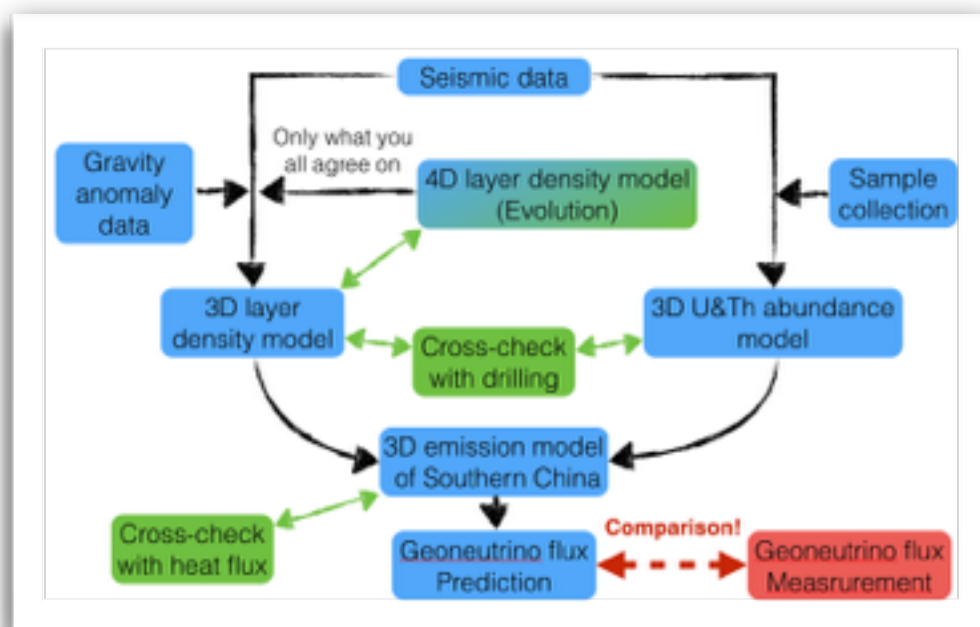

# Complete Picture

# Final Words

- We have an idea how to proceed to achieve our ultimate goal: Build 4D (emission) model of Southern China
- You can all benefit both from the **journey** and from the **result**

1. Each box and line hide the **potential for many papers** -> We can satisfy the system
2. Each step needs input from the previous steps - requires **publicly sharing of the data and method/code** (follow Sabin's example)
3. Coordinators of global effort needed - keep on doing this meeting
4. The final result can be used for further studies and shows the way to go for other regions -> **More knowledge & more papers**

# Final Words

- We have an idea how to proceed to achieve our ultimate goal:  
Build 4D (emission) model of Souther China
- You can all benefit both from the **journey** and from the **result**

Thank you all for very nice presentations  
and stimulating discussion
