Overlap removal

- To prevent potential double-counting of objects in the detector, the reconstructed objects are required to have a minimal spatial separation.

The overlap removal is performed in the following order:

1. Remove electrons within $\Delta R = 0.4$ of any photon
2. Remove muons within $\Delta R = 0.4$ of any photon
3. Remove jets within $\Delta R = 0.4$ of any photon
4. Remove jets within $\Delta R = 0.2$ of any electron
5. Remove electrons within $0.4 \Delta R$ of any jet
6. Remove muons within $\Delta R = 0.4$ of any jet
