## Outline

- Precut
- BDT result
- Fit result
- Branch ratio
- Summary

## Physics Motivation

- Measure the branch ratio of $H \rightarrow W W$ through $W W \rightarrow \bar{l} \nu l \bar{\nu}(l=e, \mu)$ on CEPC

## Precut on $W W \rightarrow \bar{e} \nu \nu e \bar{\nu}$

- Number of Photon: N.Pho $<4$
- Number of Charge:
$1 \leq$ N.Charge $<5$
- Number of Isolated Lepton:
N.IsolatedLepton $=2$

## Precut on $W W \rightarrow \bar{e} \nu \nu e \bar{\nu}$

- the Leading Leptons' Transverse Momentum: $5<P_{T}<70$
- the Leading Leptons'

Longitudinal Momentum:
$-55<P_{Z}<55$

- the Leading Leptons' Energy: $20<E_{l 1}<70$

## Precut on $W W \rightarrow \bar{e} \nu \nu e \bar{\nu}$

- the second Leading Leptons' Energy: $E_{l 2}<45$
- Miss Energy: $150<$ MisEner
- the two leptons' Invariant Mass: $5<$ llInvMass $<70$

## Precut on $W W \rightarrow \bar{e} \nu \nu e \bar{\nu}$

- included angle of the two leptons: $15<$ llAngle $<130$
- pull: $\sqrt{\left(\frac{\operatorname{trkD0_{0}^{2}}}{\operatorname{sig} D 0_{0}^{2}}+\frac{\operatorname{trk} Z 0_{0}^{2}}{\operatorname{sig} Z 0_{0}^{2}}\right) \cdot\left(\frac{\operatorname{trkD0_{1}^{2}}}{\operatorname{sig} D 0_{1}^{2}}+\frac{\operatorname{trk} Z 0_{1}^{2}}{\operatorname{sig} Z 0_{1}^{2}}\right)}<30$

## BDT result of $W W \rightarrow \bar{e} \nu e \bar{\nu}$

Correlation Matrix (background)

TMVA overtraining check for classifier: BDT

Correlation Matrix (signal)

- RecPt1: the Leading Leptons' Transverse Momentum
- RecPt2: the second Leading Leptons' Transverse Momentum
- $\triangle \phi$ : azimuth angle between the two leptons

## BDT fit

- left: before bdt cut; right: after bdt cut

## the measurement of $B r_{H \rightarrow W W}(1 / 2)$

- after BDT cut

| channel $(W W \rightarrow l \nu l \nu)$ | N.sig | N.bkg | $\Delta N . s i g / N . s i g=\sqrt{s+b} / s$ |
| :---: | :---: | :---: | :---: |
| $e \nu e \nu$ | 172 | 2428 | $29.6 \%$ |

- considering

$$
B r_{H \rightarrow W W}=\frac{N \cdot \operatorname{sig} /\left(\omega \cdot \varepsilon_{s i g}\right)}{L \cdot \sigma_{Z H} \cdot B r_{W \rightarrow e \nu}^{2}}
$$

$\omega$ is weight, $\varepsilon_{\text {sig }}$ is cut flow efficiency,set $\Delta \omega=0, \Delta \varepsilon_{\text {sig }}=0$.
$\frac{\Delta \sigma}{\sigma}=0.5 \%$ and ignore the $\Delta L$,so

$$
\frac{\Delta B r}{B r}=\sqrt{\left(\frac{\Delta N \cdot s i g}{N . s i g}\right)^{2}+\left(\frac{\Delta \sigma}{\sigma}\right)^{2}+\left(\frac{\Delta B_{H \rightarrow e \nu}}{B_{H \rightarrow e \nu}}\right)^{4}} \approx 29.6 \%
$$

## the measurement of $B r_{H \rightarrow W W}(2 / 2)$

- from last page,before we adopt BDT cut,the cut efficiency is $62.9 \%$
- but we don't adopt this value, we randomly select one half data from 11582 events, then get a new efficiency: $\varepsilon_{\text {sig }}$

| channel $(W W \rightarrow e \nu e \nu)$ | N.sig |
| :---: | :---: |
| before cut | 11582 |
| after cut | 1902 |
| $\varepsilon_{\text {sig }}$ | $32.3 \%$ |

- so the reconstructed N .sig from $H \rightarrow W W \rightarrow e \nu e \nu$ :

## $\frac{11582 * 32.2 \%}{32.3 \%} \approx 11546$

- the measured $B r_{H \rightarrow W W}=\frac{11546 \cdot 21.5 \%}{11582} \approx 21.4 \%$
- so $B r_{H \rightarrow W W} \approx 21.4 \% \pm 29.6 \%$

## Summary and To do

- Br of $H \rightarrow W W$ is $21.4 \% \pm 29.6 \%$ through $W W \rightarrow e \nu e \nu$
- the fit result seems not better than number counting
- the combined measurements of the 3 channels is not finished

Thanks !

## backup

## Explanation of my signal weight

- professor Gang Li helped me generated 997637( $\approx 10^{6}$ ) $\nu \nu H(\rightarrow W W) \mathrm{MC}$ samples
- for my three signal channel
$W W \rightarrow e \nu e \nu, W W \rightarrow e \nu \mu \nu, W W \rightarrow \mu \nu \mu \nu$, i could roughly get $997637 \times\left(10.71 \%^{2}+2 \times 10.71 \% \times 10.63 \%+10.63 \%^{2}\right) \approx 45432$
events.
- considering $L \cdot \sigma_{Z H} \cdot B r_{Z \rightarrow \nu \nu} \cdot B r_{H \rightarrow W W^{*}} \cdot\left(B r_{W \rightarrow e \nu}^{2}+B r_{W \rightarrow \mu \nu}^{2}+\right.$ $\left.2 \cdot B r_{W \rightarrow e \nu} \cdot B r_{W \rightarrow \mu \nu}\right)=5050 \cdot 212.13 \cdot 20 \% \cdot 21.5 \% \cdot\left(10.71 \%^{2}+2\right.$. $10.71 \% \cdot 10.63 \%+10.63 \%^{2}$ ) $\approx 2097$
- the weight value:2097/45432 $\approx 0.046$
- actually,i get 46018 events, not reach but close to 45432 .
the measurement of $B r_{H \rightarrow W W}$ through number counting (2/2)
- after BDT cut

| channel $(W W \rightarrow l \nu l \nu)$ | N.sig | N.bkg | $\Delta s / s=\sqrt{s+b} / s$ |
| :---: | :---: | :---: | :---: |
| $e \nu e \nu$ | 172 | 2428 | $29.6 \%$ |
| $e \nu \mu \nu$ | 419 | 3489 | $14.9 \%$ |
| $\mu \nu \mu \nu$ | 223 | 2801 | $24.6 \%$ |

- combined $\Delta s / s=\frac{1}{\sqrt{(1 / 29.6 \%)^{2}+(1 / 14.9 \%)^{2}+(1 / 24.6 \%)^{2}}}=11.7 \%$
- considering
- considering

$$
B r_{H \rightarrow W W}=\frac{N}{L \cdot \sigma_{Z H} \cdot\left(B r_{W \rightarrow e \nu}^{2}+B r_{W \rightarrow \mu \nu}^{2}+2 \cdot B r_{W \rightarrow e \nu} \cdot B r_{W \rightarrow e \nu}\right)}
$$

$$
\frac{\Delta \sigma}{\sigma}=0.5 \% \text { and ignore the } \Delta L, \text { so ? }
$$

## Previous result

- after BDT cut

| channel $(W W \rightarrow l \nu l \nu)$ | N.sig | N.bkg | $\Delta s / s=\sqrt{s+b} / s$ |
| :---: | :---: | :---: | :---: |
| $e \nu e \nu$ | 179 | 3053 | $31.7265 \%$ |
| $e \nu \mu \nu$ | 419 | 3489 | $14.8996 \%$ |
| $\mu \nu \mu \nu$ | 223 | 2801 | $24.6314 \%$ |

- combined

$$
\Delta s / s=\frac{1}{\sqrt{(1 / 31.7265 \%)^{2}+(1 / 31.7265 \%)^{2}+(1 / 31.7265 \%)^{2}}}=11.8293 \%
$$

- considering

$$
B r=\frac{N}{L \cdot \sigma}
$$

$\frac{\Delta \sigma}{\sigma}=0.5 \%$ and ignore the $\Delta L$,so

$$
\frac{\Delta B r}{B r}=\sqrt{\left(\frac{\Delta s}{s}\right)^{2}+\left(\frac{\Delta \sigma}{\sigma}\right)^{2}}=\sqrt{0.5 \%^{2}+11.8293 \%^{2}} \approx 11.84 \%
$$
