

# Weekly report

9.25 - 9.27

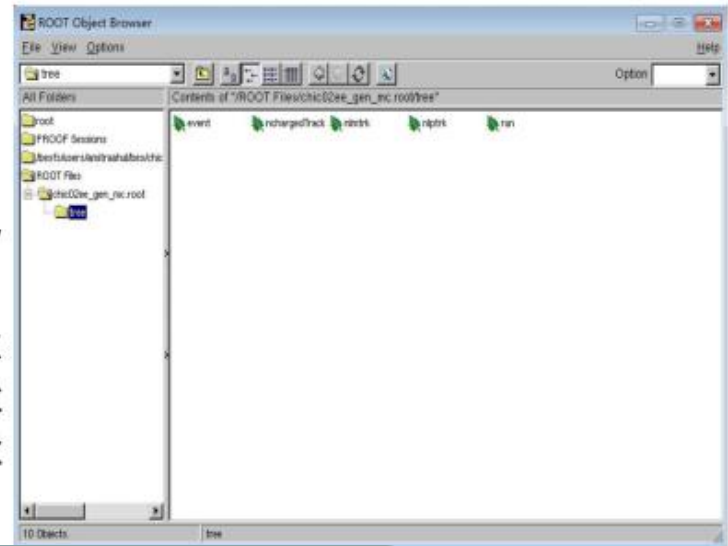

# Suyu

- install CentOS and TCAD(Wu Kewei, Suyu, Kai, and kind help from Liejian, zhijun)
  - installed centOS 7, many unexpected errors appeared
  - Cern SLC 4.8 too old, and not easy to get ISO file
  - installed CentOS 6.10 successfully, and TCAD done,
  - plan to install teamviewer today.
- Prepare materials for testbeam at CERN and submit ARP application

# Amit

- After saving the information of total number of charged track, I had to get the information for good charged tracks.
- I had been stuck for 2 weeks to get the information for good charged tracks.
- I was following the code for jpsi2lplm and I had added the information for **nlptrk** and **nlmtrk** in my code.
- Successfully compiled the code and submitted the job on cluster.
- Output\_file: **chic02ee\_gen\_mc.root**
- There are 5 leaves in my tree, unfortunately no data in the leaves.
- **[Kai]** has suggested me to remove the nlptrk and nlmtrk and fill only the information about the loop for charged track and I will make it soon.

- stick to the plan items **step by step**
- do not add too much code once
- this time, just save Number of good charged tracks.
- PID is on the further plan list

# Shan

- joined the summer school
- details of her work could be found in her special report today
