Weekly report

- Try to debug the example of MoreWeb, although it can generate some pictures, it shows many errors like "No section: …"

```
NoSectionError: No section: 'DigitalCurrent'
No section: 'AnalogCurrent'
```

- I think one possible reason is that I don't have some files

```
with Parameters from /home/Snowball/sdvlp/elcom/trunk/config/defaults/defaultParametersModule
```

```
got command to execute /home/Snowball/sdvlp/elcom/trunk/config/tests/powercycle
```

- Also, I try to fix the errors from the code, but it's kind of complex, may be one more week to fully understand.

Plan

- I think I need log files to run our root files in MoreWeb, if we don't have, may be I should write one.
