The IDEA Muon detector

P. Giacomelli INFN Bologna on behalf of the IDEA group

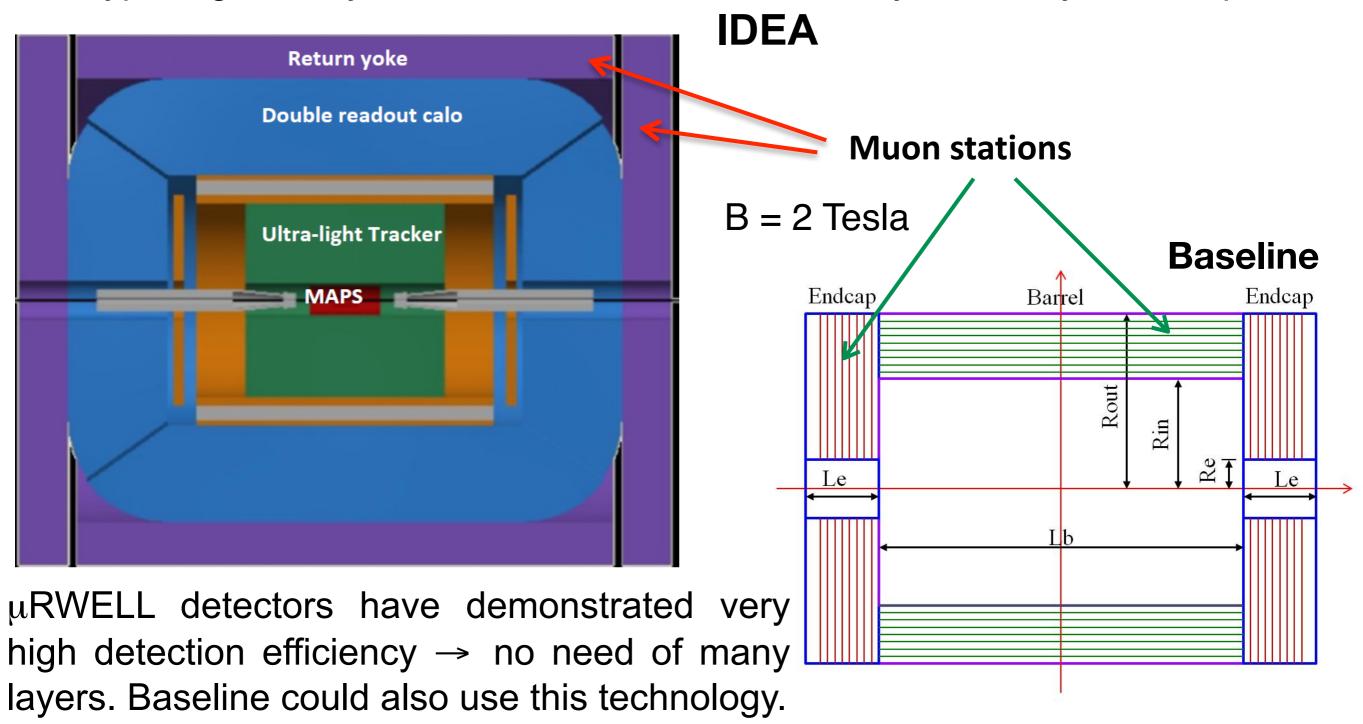

μRWELL-based muon detector for CepC

In the IDEA detector, the muon detection system is made of 3 (or 4) μ RWELL-based stations interleaved in the iron return yoke.

Typical geometry with a central barrel hermetically closed by 2 endcaps.

IDEA Muon detector characteristics

- Muon detector with 3 stations in both barrel and endcaps
 - Barrel surface $\sim 1000 \text{ x 2 (layers)} = 2000 \text{ m}^2$
 - Endcap surface ~600 x 2 (layers) = 1200 m²
 - Total muon detector surface 3200 m²
- μRWELL detector dimensions 50 x 50 cm²
- Strip pitch ~ 1000 μm (1 mm)
- Total number of channels ~7 million
- Position resolution ~270-300 μm per layer in both spatial directions
- Provides standalone muon momentum measurement
- Time resolution ~ 5-7 ns
- Detectors mass producible by industry
- Quality control can be performed by collaborating institutes

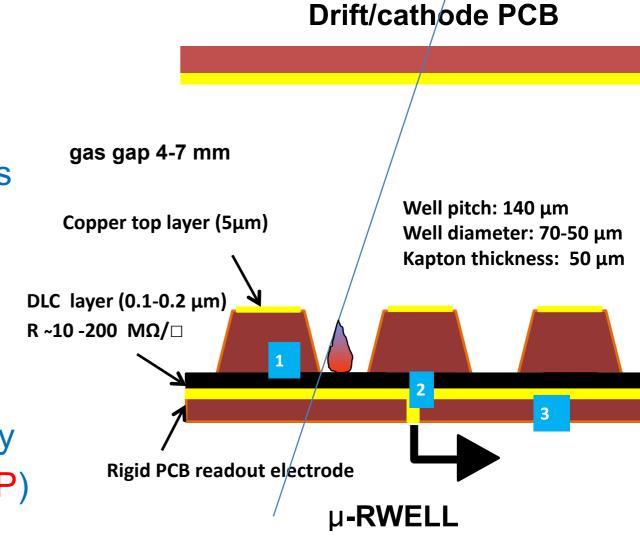

The μ-RWELL technology

The μ-RWELL detector is composed of two elements:

the cathode and the µ-RWELL_PCB.

The µ-RWELL_PCB is realized by coupling:

- 1. a "suitable WELL patterned kapton foil as "amplification stage"
- 2. a "resistive stage" for the discharge suppression & current evacuation
 - "Low particle rate" (LR) ~ 100 kHz/cm²: single resistive layer → surface resistivity ~100 MΩ/□ (CMS-phase2 upgrade - SHIP)
- 3. a standard readout PCB

Collaboration of INFN, CERN, Eltos (Arezzo, Italy)

Chinese institute USTC-Hefei involved on DLC+Cu resistive layer Techtra (Poland) company involved on chemical etching

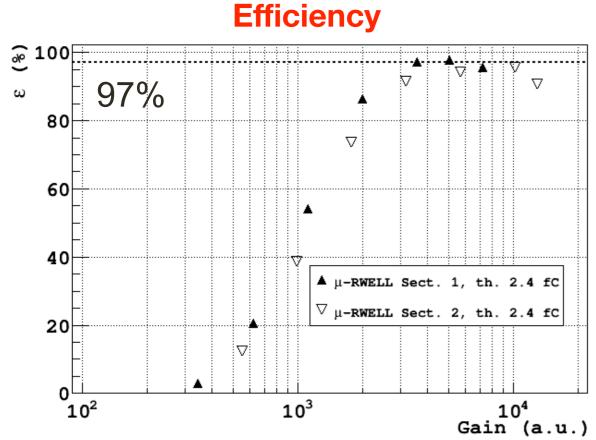

μ-RWELL features

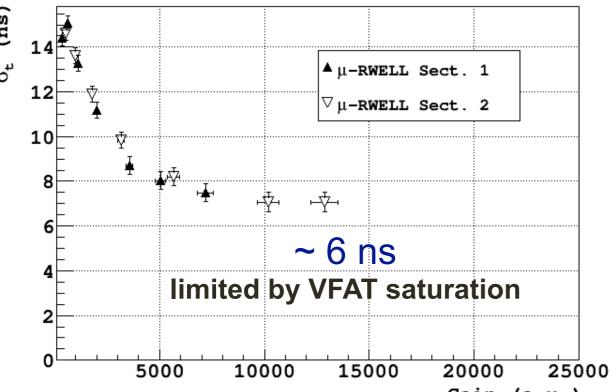

- μ-RWELL guiding principles
 - Retain the same excellent performances of GEM and MicroMegas
 - Improve the resistance to sparks
 - Simplify the components construction and final assembly
- Simpler construction
 - Only 1 kapton foil instead of 3 (GEM)
 - Single amplification layer
 - Simpler etching of the kapton foil
- More robust
 - Resistive DLC layer makes the detector very spark safe
- Simpler final assembly
 - Kapton foil glued to PCB: no stretching needed
- Less components, simpler construction → significant cost reduction
- Technology transfer to industry (Eltos, Techtra) started 2 years ago

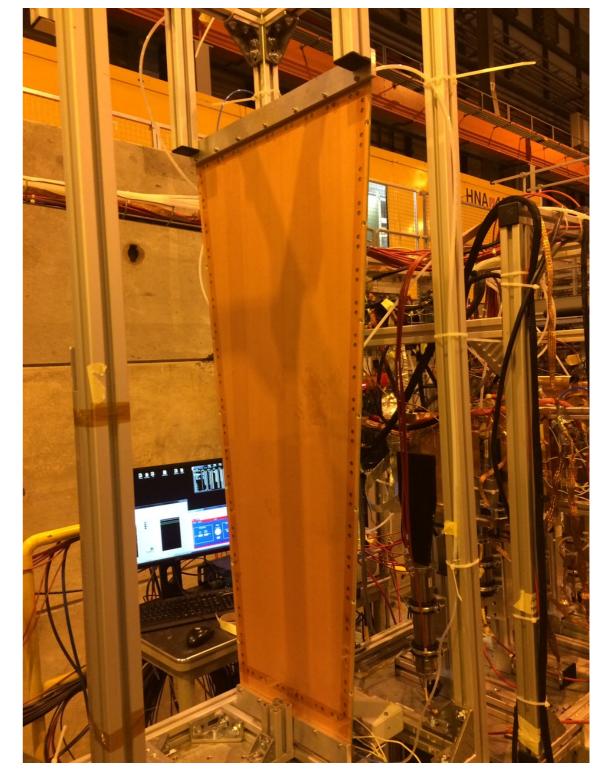

CMS GE1/1 µ-RWELL prototype at H8 test beam

Time resolution

Ar/CO₂/CF₄ 45/15/40 **VFAT FEE**

INFN CMS GE2/1 sector μ-RWELL prototype

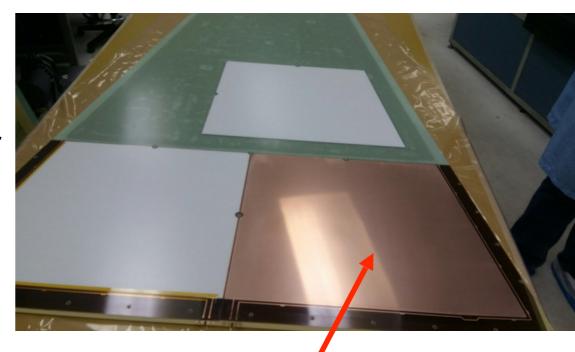

H4 test beam with 150 GeV muons:

- Voltage scan (amplification scan)
- Uniformity scan across the surface of the detector at 530
 V (~12000 gain, still to be conditioned)

The excellent results obtained demonstrate the great collaboration between INFN-Eltos and Rui de Oliveira's lab

GE2/1 20° sector with 2 M4 μ RWells (2 m height, 1.2 m base)

M4 μ-RWELL prototype is a trapezoid of ~55-60x50 cm² Largest μ-RWELL ever built and operated!

+ $V_{\mu\text{-RWELL}} = 530 \text{ V}$

INFN Summary of results with μ-RWELLs

- CMS GE1/1 prototype at H8 test beam in 2016
 - Very good time resolution, σ_t <6 ns (about 4.5 ns obtained)
 - Fully efficient for a gain of >3000
 - Tested with a rate up to ~35 kHz/cm² (only limited by beam rate)
- Position resolution
 - μ-RWELL prototypes have obtained position resolution of ~60 μm
- GIF++ ageing (radiation tolerance) test
 - Tested with global irradiation up to 100 kHz/cm² for CMS prototype
 - Gain stability up to 20000
 - No dark current, no discharges
 - $Q_{int} > Q_{int} \sim 32 \text{ mC/cm}^2$
- Technology Transfer with the Eltos and Techtra companies
- Large 50-60x50 cm² μ-RWELL modules built
 - Exposed at the CERN H4 test beam in July 2017
 - Excellent uniformity! Efficiency between 98-99% over the whole surface.

Conclusions

- IDEA Muon detector based on a 3 station configuration in both barrel and endcap regions
- Each station made of two layers of $\mu RWELL$ detectors (could use one layer of detectors with bidimensional readout)
- Total surface of the muon detector: ~1000 m² (barrel) and ~600 m² endcap
 - ~3200 m² of monodimensional μRWELL detectors
 - ~1600 m² of bidimensional μRWELL detectors
- Dimensions of single μRWELL detectors 50x50 cm²
 - 500 channels per detector (monodimensional)
- Position resolution ~270-300 μm
- Time resolution ~5-7 ns
- Efficiency >97% per station
- Muon detector provides a standalone muon momentum measurement
- Mass production of detectors by industry
- μRWELL technology suitable also for baseline solution

Muon detector dimensions, channels, cost

- Muon detector with 3 layers in both barrel and endcaps
 - Barrel surface ~1000 x 2 (layers) = 1200 m²
 - Endcap surface $\sim 600 \times 2 \text{ (layers)} = 1200 \text{ m}^2$
- μRWELL Detector dimensions 50 x 50 cm²
- Strip pitch ~ 1000 μm (1 mm)
- Total number of channels ~7 million
- Position resolution ~300 μm per layer in both spatial directions
- Time resolution ~ 5 ns
- Today's μRWELL cost ~5 keuro/m²
 - Mass production by industry should decrease this cost by at least a factor of 2 → 2.5 keuro/m²
 - Cost for the whole muon detector ~8 Meuro
 - Cost of electronics and services ~13-16 Meuro
 - Total cost ~21-24 Meuro
