NMSSM case

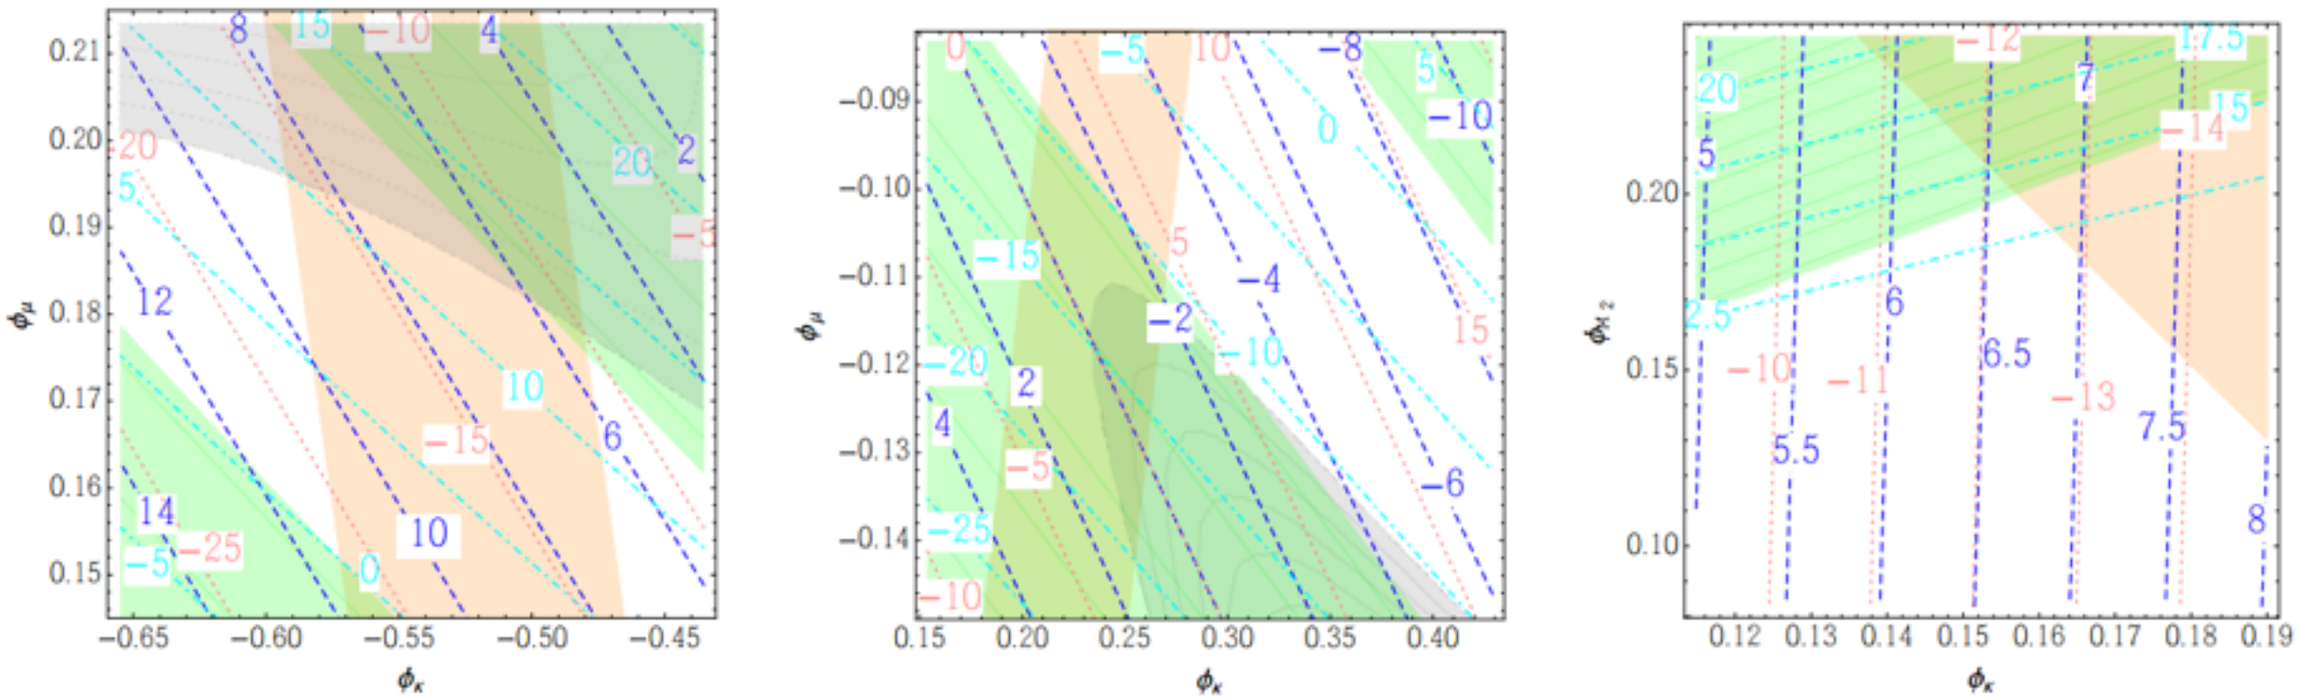

Figure 4. The combined plots of the eEDM and BAU in the plane $(\phi_\kappa, \phi_\mu(\phi_{M_2}))$ with $\phi_{M_2}(\phi_\mu) = 0$ for the scenario that H_2 is the SM-like Higgs in the CPV NMSSM. In both plots the green regions are excluded by the current eEDM experiments, the gray regions are excluded by requiring m_{H_2} to be close to 125 GeV while the orange regions are favored by the BAU results. For the contours, the blue, cyan and pink dashed lines represent the magnitudes of top quark, charginos and W boson loop contributions of the γH Barr-Zee diagrams of eEDM. The other parameters are chosen as in Table. 1.
